PREFACE

Scope. In the making of this dictionary the attempt has been to produce a word-book for the use of persons interested in aviation from any of the various points of view from which it may be contemplated, or from any of the several starting-points from which it may be pursued. The subject itself is indeed somewhat new, and not yet highly differentiated. Aviation as a whole involvs in some degree not only various other arts, such as the arts of mechanical construction and manipulation; but various sciences, such as fysics, mathematres, mechanics, meteorology, climatology, astronomy, geografy, and ernithelogy; as well as various professions and eccupations, such as transportation, navigation, sport, politics, law, warfare, literature, etc. Airships have not only to be constructed and operated, but they have also to be considerd as factors in a world-transforming process. Their gauzy wings cast strange shadows upon the pathway of humanity. No man can tell just how and when and where these airy mechanisms may not metamorfose the face of the globe, modify the structure and distribution of the human race, and unravel or weave anew the social fabric. The scope of this book is therefore wider than might at first thought seem advisable.

Aeronautics has often been considered as distinct from, or larger than, and embracing, aviation. When, about three years ago, this dictionary was first (in great part) compiled, and announced as being in preparation, I cald it a Dictionary of Aeronautics. Since that time, however, the word aviation has come into very wide use; and as the book is primarily in-

898367

terded for the use of persons interested in the more prominent of these two subjects, and as the more prominent of them seems to be dynamic flight or aviation in the narrower or more 'proper' sense, rather than aeronautics or aerostation and air-sailing generally, in the regular old-fashiond sense, I do not now hesitate to call the book a Dictionary of Aviation. To put the thing in other words, aeronautics seems to me to be getting to be considerd merely as a side-show or oldfashioned aspect of aviation, and I therefore make this book primarily for the aviators and their kindred, rother than for the aeronauts and balloonists. A further reason for the adoption of this title is the fact that the word aviation has itself come to be used sometimes as the more inclusiv term, embracing aeronautics and ballooning, as well as dynamic flight; and it seems to me likely that this inclusiv sense of the word aviation will become quite common, especially as, historically, the attempts at dynamic flight seem to antedate, or at least predominate over, the idea of aerostation.

As there apparently exists no dictionary of meteorology, and as the subject is of great importance in aviation, the number of meteorologic terms in this dictionary is larger than might otherwise be necessary.

Aviation will most likely give rise to a group of arts and industries of titanic proportions and become a factor of prodigious power in the evolution of mankind. For this reason it is interesting to show its terminology somewhat folly. Hence the vocabulary of this dictionary includes words useful to writers and translators of books and articles on aviation as well as to aviators themselvs. It is the undifferentiated vocabulary not alone of a great manufacturing industry, a great sport, a great military factor; but also of a new mode of life of mankind: of romance, and travel, and fancy.

Aviation lends itself with peculiar ease not only to imaginative and poetic literature, but to sociologic speculation, and I merely record the words and frases which I have found in actual use in the literature of aviation and of certain fases of all these other closely allied subjects.

Most technical glossaries and dictionaries are blunderingly made. They are often characterized by *(1) meagerness of vocabulary; *(2) paucity, and absence of classification, of frases; *(3) lack of alternate spellings; *(4) lack or inaccuracy of pronunciations; (5) lack of etymologies; *(6) inaccuracy of definitions; *(7) inadequate crossereferences; *(8) defective classification of the parts of speech, and differentiation of the senses, of the titleswords; *(9) badness of typografy; *(10) highness of price; (11) lack of quotations from, or references to, the literature of the subject, in support of the usage recorded.

In the present volume I have tried to overcome the deficiencies markt above with a star (*). Further improvements, at least from some points of view, would be the introduction of etymologies and references. But altho I have one or more good references or quotations from reputable books or periodicals for practically every word, and every sense of every word, in the book, I have withheld them all, as well as all etymologies, encyclopedic features, and pictorial illustrations, from the present edition.

I have been fortunate in securing certain specific criticisms, especially among the meteorologic terms, from the beginning of the book to about the word governingsplane, from A. Lawrence Rotch, founder of the meteorologic observings station at Blue Hill, near Boston, Massachusetts, and professor in Harvard University.

Vocabulary. The vocabulary of this dictionary is thus necessarily, from the scope of the subject treated, quite an extensive one. Besides the multitude of words used in the nomenclatures of the above subjects, in so far as they relate to aviation, many words and frases are included which may, on the one hand, seem bizarre or fanciful (rocketerising, adj.; scareship, n., etc.), and, on the other hand, self-explanatory (air-balloon, aviation-meet, etc.). In such a new subject, however, what seems bizarre today may not seem bizarre tomorrow, even to the same individual; and what seems, when recorded, self-explanatory or matter-of-course, is often, in

reality, neither. Besides, the fact that a word exists, is, in itself, interesting. A glance thru a well-arranged vocabulary often suggests a useful term or expression whose existence would not otherwise be suspected.

Sometimes simple and compound words which one would suppose to be in common use, do not exist in actual usage. What seems to be the obvious meaning or spelling or pronunciation of a word is often not really the true one. It is often, on the contrary, quite difficult to get at the facts of the occurrence, meanings, spellings, and pronunciations of words, even by dint of much study. Then, too, various readers have various degrees of intelligence, and various habits. Some use a dictionary often, others seldom. Some are native, others are foreners. Some are aviators, others are writers. Moreover, it is apt to be just those persons who consider these things so very obvious after they are explaind, who are apt to make the worst blunders in using words.

Nevertheless, many nonce-words, temporary combinations, etc., such as aeroplanitis, corkscrew (verb), aero-neck, aviation-committee, aviation-goer, barometer-reading, raviator, are excluded.

Spellings. The spellings or word-forms given in titles place are in the main those which are most likely to be lookt for by the general reader. Under each titlesword are given in brackets the other current spellings of the word. In some cases mention is also made of spellings no longer in current use. These are confined mainly to obsolescent forms and forms valuable because more nearly fonetic than those in current use. No attempt has been made to record all the cases in which separate words or solid words are often or generally used instead of hyfenated forms (wing warping for wingswarping; thunderstorm for thunderstorm, etc.); or all cases in which nouns have also assumptive or adjectival uses.

Cognate forms having the same meaning as the title-word but differing from it in pronunciation, are classified as 'synonymous cognates.' When a title-word is of two or more parts of speech, or when two or more title-words are spelt just alike but are of different parts of speech, or of different origin, or are for any other reason treated separately, the oldest part of speech, or the oldest title-word, is placed first, the others following somewhat in the order of their first known appearance in the literature of the subjects treated in this book.

Definitions. When several definitions are given, their order is in the main historical, the oldest sense being placed first, with the more recent senses following in the sequence of their temporal development. Fortunately this sequence is often closely identical with the sequence of their logical development.

Pronunciation. The pronunciation of the title-words is in every case indicated by a foll respelling. Under each title-word are given, in somewhat normalized or universalized form, its most acceptable or proper natural pronunciation or pronunciations current today in the English-speaking world at large.

Where several pronunciations are given without classification, the forms following the first form are usually to be considered as individual, local, or functional variants in good usage.

Fonetre Notation. The sounds of speech are noted in this dictionary by means of a system of letters which, for convenience, are arranged in the order g, k, etc. This system of letters, so arranged, I have named gammakap (from gamma and kappa), by analogy to the word alfabet, which denotes a system of letters arranged in the order a, b (or alfa, beta), etc. The system is a modified, amplified, and improved form of the international alfabet which sprang into special prominence about the year 1885 thru the efforts of Paul Passy, of Paris, and others, and which has since that time been fosterd and developt by the International Fonetic Association (20 rue de la Madeleine, Boursla-Reine, Seine, France).

This amplified form of the roman alfabet used in the respellings of the title-words thruout this dictionary has been undergoing a most remarkable advancement during the last quarter of a century. It is by far the most diversely used and highly perfected means as yet devised for indicating simply and accurately, the pronunciation of all languages in any popular world-wide system. It will doutless undergo further modification of detail as time goes on, but the principles which have quided the selection of its letters from the alfabets of the world, its flexibility, and the extent and manner of its present use, bespeak its capacity for development and foretell its universality. It has alredy been applied to several hundred languages and dialects and is now in activ competition with local and old-fashiond systems of fonetic spelling, not only in dictionaries and grammars, and textbooks on fonetics, but also in general literature.

This system of fonetic notation is in general accord with the systems used in Murray's New English Dictionary (Oxford), Wright's English Dialect Dictionary (Oxford), Funk's Standard Dictionary (New York), and a large number of bilingual dictionaries. It is similar to the alfabets advocated by the American Filological Association, the International Fonetic Association, by committees of the Modern Language Association and the National Educational Association, and used by filologists the world over. It is based upon the ordinary spelling of all the languages of the world which are written in roman letters: as, for example, English, German, French, Italian, Spanish, Latin. More different new books are using this system than all other systems of fonetic notation combined. This feature tends to render the pronunciations in the present volume equally servisable to aviators and other persons of all nationalities in all ports of the world.

Below are two tables. The first table shows the more important letters of the universal gammakap, arranged so as to give some idea of the place and manner of articulation of the sound or group of sounds which each symbol represents. Besides the symbols (letters) for indicating the basic sounds qualities, which constitute the gammakap proper, this universal system includes, of course, other symbols (modifiers), for indicating voicelessness, nasality, and whisper, and the various degrees of length, stress, and pitch. The second table shows the letters of the English gammakap, with examples of words containing the sounds which the letters represent. In a few cases, examples from foreign languages have been added, to show the occurrence of practically the same sounds in those tongues.

UNIVERSAL GAMMAKAP

Letters inclosed in curvs () indicate sounds made portly in the position where their letters are so inclosed, but mainly in the position where the same letters appear without curvs

ENGLISH GAMMAKAP

Stridents

Shut

- g good (god), linger ('lingəz), wriggle ('zıgəl), gig (gıg).
 k cook (kok), kick (kık), bunk (bank), tickle ('tıkəl), keep
 (kıip).
- d deed (drid), wind (wind), widen ('war-dn), meddle ('medl), bold (boold).
- t taught (tc:t), hint (hint), whiten ('war-tn), belt (belt), whitele ('with).
- b bib (bib), thimble ('θimbəl).
- p peep (piip), limp (limp).

Fricativ

- h who (hou), house (haus), hit (hit).
- j ye (jii), you (jou), dew (djou); German jung (jon).
- ç cure (kçu:z), pure (pçu:z); German ich (1ç).
- r dry (drai), laundry ('lc:n-dri).
- g try (tgai), pastry ('pee-stgi).
- d this (dis), heathen ('hii-don), with (wid); Spanish todos ('todos).
- θ thin (θιn), myth (mιθ), width (widθ); Spanish gracias ('graθias).
- 3 azure ('æ3əz), judge (d3Ad3); French je (3ə); Italian già (d30).
- Shoe (fou), chew (tfou); sh (f:); French chic (fik); German Schuh (fu:); Italian cinque ('tfin:-kwe); Spanish mucho ('mutfo).
- z zeal (ziił), rose (zooz), his (hiz).
- s sister ('sistəz).
- v vivid ('vivid), of (ev).
- f fife (farf).
- w win (win), dwindle ('dwindl').
- w when (wen), quick (kwik), twine (twain).

Sonorants

Nasal

- n long (le:n), longer (le:n-gəz), bank (bænk).
- n nun (nan), gardener ('ga:z-dn-əz), cardinal ('ka:z-dn-l), hint (hint).
- n snare (sne:z).
- m maim (meem), triumph ('trai-amf), limp (limp).
- м humph (мm), smear (sмі:z).

Oral

- l lull (lal), cardinal ('ka:z-dn-l), tattle ('tætl).
- z play (pree), slow (sroo).
- z red (zed), ear (1:z), earth (β:zθ), very ('vεzī).
- s free (fsii), throw (θsoo).

Resonants

High-close

- u whoever (,hu'ɛvəz), shoe (ʃou), unit ('jou-nɪt), cower ('kou-əz); French tout (tu), tour (tu:R); German Zufall ('tsu:.fol).
 - react (zi'ækt), eat (iit), scoriae ('skɔ:-zi,i:), buoyant ('boiənt); French ni (ni), pire (pi:n); German Lied (li:t).

High-open

- o full (fol), poor (po:z), shoe (Sou), unite (jo'nart); German Muff (mof).
- pity ('piti), hated ('hee-tid), axis ('æksis), foreign ('fozin), carriage ('kæzid3), senate ('senit).
- it (it), ear (1:2), eat (iit), high (hai), why (wai), boy (boi): German bin (bin).

Mid-close

- o poetic (po'etik), note (noot); French pot (po), côte (ko:t); German Sohn ('zo:n), Italian leone (le'o:-ne).
- o over ('oo-vəz), sofa ('soo-fə), again (ə'gen), truism ('tgou-,ızəm), taken ('tee-kən), chocolate ('tʃəkə-lət), chestnut ('tʃesnət), tackle ('tækəl).
- aereal (e'ī:-zi-əl), gate (geet); French été (e'te); German Reh (re:); Italian pere ('pe:-re).

0

æ

Mid-open

A but (bat), under ('Andez).

door (do:z), obey (o'bee), note (noot); French note

(not), tort (to:R); German Gott (got).

bed (bed), bear (be:z), gate (geet), example (eg'za:m-pel); French fait (fe), tête (te:t); German Bär (be:x), Bett (bet); Italian tempo ('tem:-po), bene ('be:-ne).

Low-close

c autumnal (c'tamni), law (ic:); Italian poco ('pc:-ko).

B fur (fB:z), turtle (tBztl), hurry ('hBz1).

cat (kæt).

Low-open

a far (fa:z), barter ('baztəz), cow (kao), why (war), French pas (pa), pâte (pa:t); German Mal (ma:l), ab (ap), bei (bar); Italian amare (a'ma:-re).

e hot (het), horn (he:zn), boy (bei).

a ask (a:sk), high (hai); French patte (pat), part (pair).

Compound Sounds. Among the consonants attention may be cald to the affricate d₅, as in judge (d₅Ad₅), and its voiceless mate t₅, as in church (t₅B:zt₅).

Among the vowels may be noted eight normal rising difthengs, as follows: ou, as in fool (foul), ii, as in see (sii); oo, as in note (noot); ee, as in gate (geet); oo, as in now (noo); or, as in wise (worz); or, as in boy (bor); or, as in kite (kort). The last four difthengs (ou, or, or, or, when followd by a syllable beginning with a vowel, usually become ou, oi, oi, oi, as in tower ('tou-oz), quiet ('kwoi-ot), buoyant ('boi-ont), buyer ('bai-oz).

There are also four normal falling difthougs, after [1], [2], [v], [f], as follows: iu, as in purlieu ('pszliu), diffluence ('difziu-əns), feverfew ('fri-vəz,fiu); io, as in emolument (x'melio-mənt); io;, as in lure (lio:z); iə, as in behavior (bi'hee-viəz).

Besides these sixteen normal difthougs, there is the one normal trifthoug, iou, after [1], [v], and [f], as in lieu (liou), view (viou), and few (fiou).

Duration. Extra length, or duration, of elementary

sounds, especially in the case of vowel sounds, is indicated by the length-mark (:) placed just after the letter representing the sound in question, as in calm (ka:m), law (lc:), air (e:z), fan-blast ('fæn,bla:st).

Syllabreation and Stress. A syllable is a prominence of sonorousness or loudness: a wave, as it were, of sonority, rising above the general level of speech.

A syllable may be cald *static* when at its inception the force of the breth-impuls remains the same as it was just before, or changes only at the same rate at which it was before changing.

A syllable may be cald *dynamic* when at its inception the force of the breth-impuls is suddenly increast. The first or initial syllable of any utterance is of course a dynamic syllable.

Between a dynamic syllable and a static syllable, as in the word better ('betəz'), mentiond above, or between two contiguous static syllables, as in the word logically ('ledʒikə-li), there is no point of division lying between two sounds of different quality. In so for as there exists any definit point of syllabic division in such cases, it must always be located within the limits of a sound of minimum sonority. In the word better, this sound is the [t]; in logically, the [d] or the [k]. These sounds belong to neither syllable more than to the other, but each one of them constitutes a nexus in which the two syllables meet.

Every dynamic syllable, on the other hand, must always have a definit storting-point, located either (1) at the beginning of the word or utterance, as, in the word better ('betəz'), at the beginning of the [b]; (2) between two medial sounds of different quality, as, in the word baker ('bee-kəz'), at the beginning of the [k], and, in the word coolie ('kou-li), at the beginning of the [l]; or (3) within the limits of some medial sound which, were there no new breth-impuls, would be a single sound, as, in the word rat-trap ('zæt,tæp), at the beginning of the second [t], and, in the word coolly ('koul-li), at the beginning of the second [t]. When a (second) new dy-

namic syllable or breth-impuls thus begins within a sound, the sound is cald double or geminated, and is, thruout this dictionary, represented (as here) by two separate letters.

When, as is always the case at the inception of a static syllable, the intersyllable though lies within the limits of a single sound (of minimum sonerity), as, in the word better ('betəz'), within the [t], the letter representing this sound of minimum sonerity sufficiently indicates the position of the intersyllable though. It is neither necessary nor beneficial further to indicate its position, for unless in uttering the word a new breth-impuls is gratuitously introduced, or some error made in the sounds themselvs, the correct pronunciation will necessarily result.

When, on the other hand, as is always the case at the inception of a dynamic syllable, the intersyllabic trough lies just before a certain sound, as before the [b] in better or before the [b] or the [k] in baker, it is eften most necessary and beneficial to indicate its position. Thruout all the pronunciations in this dictionary this intersyllabic trough is, except initially or where alredy indicated by a stress-mark (see just below, in the paragraf on Stress), indicated by means of a hyfen or impuls-mark (-).

Stress. Stress, or dynamic accent, is the relative emfasis with which a sound, syllable, or sequence of syllables is utterd. It is the intensity or degree of energy characterizing a breth-impuls used in speech. It is the force or vigor imported to any given utterance by the breth.

In this dictionary the stortingspoint of every syllable having chief stress (that is, having the primary degree of force of a new or reinforced brethsimpuls) is always indicated by means of a special symbol, the chief stressmork ('), placed just before the strest syllable; and the stortingspoint of every syllable having secondary stress is, wherever practicable, indicated by means of the secondary stressmork (,) placed just before the strest syllable. The stortingspoints of other non-initial dynamic syllables having only tertiary, quarternary, or other weak stress, are left unmarkt except by the hyfen or

general symbol of reinforced breth-impuls (-), as described above in the paragraf on Syllabication (page 12).

Abbreviations and Signs. Abbreviations are used only for the names of the parts of speech.

LIST OF ABBREVIATIONS

adj.	adjectiv	1 pl.	ploral
adjpron.	adjectiv-pronoun	pron.	pronoun
adv.	adverb	n.	noun
conj.	conjunction	noun-pron.	noun-pronoun
interj.	interjection	v.	verb

In illustrative frases, as under the title-word trim, the title-word, where it occurs in the sense illustrated, is markt by means of a star or asterisk (*) just preceding the word, in order to aid the reader in seeing it or in identifying it.

Spelling Reform. The reformation of spelling presents itself under three modes: simplified spelling, clarified spelling, and fonetic spelling. Simplified spelling and clarified spelling are alike in being but amendments of the current orthografy, while fonetic spelling is a relativly independent system of orthografy based upon pronunciation. All three of these modes of reformd spelling are used to a certain extent in this dictionary.

Simplified Spelling. The current spelling may be simplified to some extent by omission of silent letters, by the amendment of certain glaring irregularities, and so on. This is the method used by the Simplified Spelling Board (i Madison Avenue, New York) and the Simplified Spelling Society (44 Great Russell Street, London, W. C., England).

Simplified spellings are used in the definitions of this dictionary largely on their merits as media thru which to help the reader easily to grasp the pronunciation of the words. Besides most of the forms listed by the Spelling Board, I have occasionally used forms such as giv, liv, impuls, servis, etc. Where simplified spellings would on any account fail of this object and render the text unduly obscure, their use has often

been avoided. In the case of the word fugoid, which is used in the text in this form (simplified initially), the simplified form is, for the reader's convenience, given in title-place, with a cross-reference to the more conventional spelling (phugoid).

I insert the simpler forms among the variant spellings in this dictionary not solely because they are advocated by the Board and others, but because many of them either have long existed or do now exist to a considerable extent in current use in literature; and also because almost all of them are either in accord with what I consider to be a scientifically practicable system of standardized fonetic orthografy, such as is used in the respellings given in this book to indicate pronunciations and is, in my opinion, destind eventually to supersede the current English cacografy.

The following are the rules governing the simplifications containd in the list of about 3300 words publisht by the Simplified Spelling Board on March 6, 1909 (Circular No. 23). Aside from a few slight changes in the wording, some minor adjustments necessitated by a more accurate marking of the pronunciations, etc., and one additional example under Rules 12 and 17, the rules and examples are given exactly as publisht by the Board.

To facilitate acceptance it was deemd expedient by the Board in some cases to restrict the rule to a limited number of the words in a given class. In these cases the expression 'Restricted Rule' has been used. Any one who chooses to extend the rule at once to all the words of a given class is of course free to do so. After each rule is given a list, either of all the words affected (if they are not many), or of a few examples of the large number of words coverd by the rule. In the latter case 'Examples' is prefixt, and 'etc.' is added. If the Board's official recommendation applies to all words containing the letter, sequence of letters, or suffix, affected, in the pronunciation indicated, the expression 'General Rule' is used. For some small classes and for isolated amendments no rule is given.

RULES OF SIMPLIFIED SPELLING

1. ae, æ or e, net final. General Rule: Choose e. Examples: anesthetic, chimera, era, esthetic, ether, medieval, paleontology, etc.

2. -bt, with b silent. General Rule : Omit b. det, dettor,

dout, indetted, redout, redouted, redoutable.

3. ea, pronounced [2]. General Rule: Drop a. Examples: hed, spred, sted, tred, thret, helth, welth, dremt, ment, plesant, etc.

4. ea, pronounced [a], before r. General Rule: Drop e.

karken, hart, harth.

- 5. -ed or 'd, pronounced [d]. General Rule: Use simple d in all cases (reducing a double consonant). Examples: aimd, armd, burnd, deemd, dimd, feld, fild, hangd, raind, stird, veild, etc.
- 6. -ed or -t, pronounced [t], the preceding single consonant being doubled before -ed (-pped, -ssed) and left single before -t (-pt, -st). General Rule: Choose -t in all cases. Examples: dipt, dript, dropt, stept, stopt, blest, prest, mist, blusht, washt, wisht, lockt, packt, etc.

7. -ence or -ense (Latin -ensa). Restricted Rule: Choose -ense. defense, offense, pretense; also license (Latin -entia).

8. -ette or -et. General Rule: Choose -et. Examples: coquet, epaulet, etiquet, omelet, quartet, quintet, septet, sextet, etc.

9. gh or f, pronounced [f]. Restricted Rule: Choose f. draft, not draught.

- 10. -gh, silent: (1) -ough or -ow, pronounced [au, au]. Restricted Rule: Choose -ow. plow. (2) -ough or -o, pronounced [50, 0, 0]. Restricted Rule: Choose -o. altho, tho, thoro, boro, -boro (in place names), furlo. (3) -ough or -o, pronounced [50, u, u]. through, thro, thro. Restricted Rule: Choose thro, but advance it now to thru.
- 11. -ice, unstrest, pronounced [18]. General Rule: Spell
 -is. Examples: artifis, coppis, cornis, crevis, edifis, justis, notis, servis, etc.
- 12. -ile, unstrest, pronounced [14, 4]. General Rule: Omit e. Examples: agil, futil, servil, juvenil, etc. When otherwise pronounced, as [114, 14], retain -ile.
- 13. -ine, unstrest, pronounced [111]. General Rule: Omit e. Examples: determin, doctrin, engin, examin, genuin, imagin, pristin, etc. When otherwise pronounced, as [ain, in], retain -ine.

14. -ise, unstrest, pronounced [15]. General Rule: Omit e.

anis, mortis, practis, premis, promis, treatis.

15. -ise or -ize (from Greek), pronounced [aiz], suffix of verbs. General Rule: Choose -ize. Examples: civilize, criticize, exorcize, legalize, organize, etc.

16. -ite, unstrest, pronounced [11]. General Rule: Omit e. Examples: apposit, definit, infinit, preterit, requisit, etc.

When otherwise pronounced, as [art, it], retain -ite.

17. -ive, unstrest or with only subordinate stress, pronounced [iv, iv]. General Rule: Omit e. Examples: activ, adjectiv, detectiv, executiv, motiv, nativ, progressiv, adjectivly, etc.

18. -11 or -1 (-ill or -il). General Rule: Choose -1.

distil, fulfil, instil; like until, compel, impel, etc.

10. -II- or -I- (-iII- or -iI-, -uII- or -uI-), before -ful or -ness. General Rule: Choose -I. skilful, wilful, dulness, fulness.

20. -mb, with b silent. Restricted Rule: Omit b. crum,

dum, lam, lim, num, thum.

21. -mn, with n silent. Restricted Rule: Omit n. Autum, colum, solem.

22. 0e, œ, or e, not final. General Rule: Choose e. Examples: ecumenical, esophagus, phenix, subpena, etc.; like economy, solecism, etc.

23. -our or -or. General Rule: Choose -or. Examples: ardor, candor, clamor, color, favor, flavor, honor, humor, labor, rumor, tumor, valor, vigor, etc.; also, arbor, harbor, neighbor, etc.

24. **ph** or **f**, pronounced [f]. Restricted Rule: Choose **f**. fantasm, fantasy, fantom, sulfate, sulfur; like fancy, frantic,

frenzy, coffer, coffin, etc., which originally had ph.

25. **ph**, pronounced [f]. General Rule: Use **f**. camfor, cifer; alfabet, diafram, pamflet; autograf, bibliografy, biografy, fonograf, fotograf, paragraf, telegraf, telefone.

26. - Pr or - P. General Rule: Choose - P. bur, pur; like

cur, fur, blur, slur, spur, car, far, fir, stir, etc.

27. -re or -er, pronounced [52]. General Rule: Choose -er. Examples: accouter, center, fiber, meter, miter, niter, saltpeter, scepter, sepulcher, somber, specter, theater, etc.; like diameter, number, etc.

28. s or z (in the root). Restricted Rule: Choose z. apprize, assize, comprize, enterprize, raze, surprize, teazel. (See

also Rule 15.)

29. s medial, silent. Restricted Rule: Drop s. aile, ile, ilet, iland.

30. ue, silent, after -g. Restricted Rule: Omit ue. catalog, decalog, demagog, pedagog, prolog, colleag, leag, harang, tung.

31. ve, after -1 or -r, pronounced [v]. General Rule: Omit e. Examples: delv, shelv, twelv, selvs, carv, curv, nerv,

serv, deserv, reserv, starv, etc.

Clarified Spelling. The current spelling may be clarified or made considerably clearer by the substitution of certain letters of definit fonetic value for the ordinary letters closely resembling them or associated with them in the popular mind, wherever these ordinary letters, in the particular context in which they occur, have the exact value of the fonetic letters. This mode of spelling reform has been in vogue for thousands of years. It has recently been used in English in the works of Dr. Francis A. Murch and others, but in a crude and inaccurate manner and to a very limited extent. It has been used in Italian with considerable accuracy thruout the dictionaries and grammars of P. Petgocchi.

In English *(g) may thus be substituted for (g), *(gh) for (gh); (5) for (s), (5h) for (sh); *(5) for (z); (z) for (s); *(w) for (w), *(wh) for (wh); (1) for (n); (N) for (n); (M) for (m); (1), (2) for (1); *(x), *(x), (z), (z) for (x); *(x) for (x); *(x), *

In the present volume only the letters here markt with a star (*) have been used in this way. Further clarification or at least simplification, has been effected, thruout this book, by always using (ff) for (ff), (ffi) for (ffi), (fi) for (ff), (ffi) for (ffi), (ffi) for (ffi), (oe) for (æ), except in certain words adopted from French, and (ae) for (æ). This is quite common practis now-a-days, as in newspaper and jeb composition.

To this extent clarified spelling has also been used thruout this book, except (in this Preface) in the table of the English gammakap and in certain other places where the exact current spellings of certain words have to be given for illustrative purposes; and (in the body of the book) in the title-words, alternate spellings, cognate forms, etc. Clarified spelling is thus used not only because of its intrinsic merits but also in order to familiarize the reader with the fonetic value of certain letters.

In stalic type, (g) has been used in this dictionary for (g) when not having the sound [g], [g]. Various other modifications or clarifications are desirable in connection with the stalic letters a, a, e, i, i, m, n, o, r, s, u, v, w, and y. They admit of being conformd to and differentiated along with the corresponding roman letters.

The double hyfen (s) has been used thruout this dictionary, except in the boldface type, as a substitute for the ordinary hyfen for joining the elements of compound words, etc.

Fonetic Spelling. The current spelling of English, along with that of other languages, is, in my opinion, likely to be replaced by one or more systems of fonetic spelling. Fonetic shorthand has alredy replaced or supplemented the current spelling for reportorial and other purposes. Various systems of roman-letter fonetic spelling have alredy supplemented the current spelling in the respellings given in dictionaries and grammars. Fonetic texts are coming into common use in schools, and young people will soon be using them in preference to texts printed in the current cacegrafy. Fonetic spelling is used in the present volume in the respellings of the title-words, in the representation of their pronunciation. For a more complete exposition of this subject the reader may refer to my Dictionary of Hard Words, publisht last year.

ROBERT MORRIS PIERCE

New York, March 3, 1911

Dictionary of Aviation

them to make the Property against the College

abduction , &b'dak \(\)on n. a leading or drawing away; the act of abducting; the muscular withdrawal, as of a forelim or wing, outward or away from the axis or median
line of the body or part to which the lim is attacht: the
opposit of adduction.

abutment-area ə'batmənt, e:-zi-ə n. the area of an abutments

plane.

abutment-fin ə'batment,fin n. a fin-like abutment-plane: distinguisht from directive fin. see under fin.

abutment-plane o'batment, pleen n. a plane or aerofoil, in an aerodone, which acts as an abutment or support.

acentric o'sentrik adj. not centric; not having the center of resistance coincident with the line of flight: as, an *acentric aerodone, aerodrome, or flyingsmachine.

acrobat 'ækgə,bæt n. a morsupial quadroped of the genus Acrobates, provided with a patagium by which it is enabled to take flying leaps thru the air; one of the Acrobata.

actinograph ,æk'tınə,gza:f n. [also spelt actinograf] an instrument for automatically registering the variations of actinic or chemic influence of radiations from any source, especially the sun.

actinometer , **ækti'nomi-təz n. an instrument for mesuring the actinic influence of radiations from the sun, etc.

actinometry , &ktr'nomi-tri n. the art of mesuring the actinic influence of radiations from the sun, etc.

action-radius 'æksən,zee-di-əs n. the radius of action of an airship; the radius of the circle or area of the earth's surface over which the activities, movements, or operations of a dirigible balloon extend; the distance, mesured radially in any direction from the starting-point, which an airvessel is capable of covering; the cruising-radius.

acuteness o'kçout-nis n. the quality or character of being acute, or long and pointed, as are the wings of some birds;

sharpness, pointedness.

adduction o'dakson n. a drawing or bringing toward or inward; the act of adducting; the muscular drawing in, as

of a fore-lim or wing, toward the axis or median line of the body or part to which the lim is attacht: the opposit of abduction.

adiabat 'ædi-ə,bæt n. an adiabatıc line or curve; an adia-

patic.

adiabatic ,ædi-ə'bætik adj. without transference: said of change of velume of a mass of air, or other fluid, unaccompanied by any transference of heat to or from surrounding masses of air, or, that is, by either gain or loss in the total heat-energy containd within the mass.

adiabatic change, a change or variation, as in the temperature of an airsmass, under adiabatic conditions; an alteration which is unaccompanied by any transfer of (internal)

heatsenergy to other (external) masses or localities.

adiabatic curve, a curvd line showing the relation between the pressure and the volume of a fluid under adiabatic conditions; a curv which exhibits the relation of the volume of a fluid to the external pressure upon it, when there is no transference of heat-energy either to or from the fluid.

adiabatic gradient, see under gradient.

adiabatic law, the law or principle relating to adiabatic change, as of the volume or temperature of a mass of air or other fluid; the rule as to the expansion or contraction, or the variation in temperature, of an air mass when subjected to different external pressures, but without any loss or gain in the total thermal energy possest by the mass.

adiabatic ,ædi-ə'bætik n. a line or other grafic representation (on a wether map) of adiabatic changes; an adiabatic line or curv; an adiabat: as, the *adiabatic of dry air.

adjusting-plane o'dsastin, preen n. a small plane or aerofoil, as at the extremity of a wing-tip, used to adjust the lateral balance of a flying-machine; an adjusting-surface.

adjusting-surface o'd5astin, sezfis n. an adjusting-plane.
aerial .e'i:-zi-əl adj. [also spelt aërial and, formerly, aereal]

1. of air as a substance; consisting or composed of air; of the nature of air; aeriform, air-like, gaseous; thin or attenuated as air; etherial, shadowy; light as air; airy.

2. of the whole bedy of air, or atmosfere; pertaining to or produced in or by the air or atmosfere; atmosferic; existing, moving, flying, floating, or functioning in the atmosfere; placed aloft; lofty, elevated.

aerial architecture, airship architecture.

aerial battleship, a battleship of the air; an aerial warship; a flying-machine conceivd as being used in aerial warfare.

aerial bird, a bird that habitually moves chiefly by flight in the air: distinguisht from walking, waddling, and swimming birds.

aerial age, the age of aerial navigation; the flying age. aerial car, a car used for traveling in the air, as the basket of a balloon, or a cor designed for an aerial railway.

aerial engineering, engineering as related to aerial navigation or aviation; the grt of constructing and using airs

aerial ferry, an airship which servs as a ferry by taking passengers across a river, bay, or the like.

aerial flight. see under flight.

aerial image, an image appearing suspended in the air, caused by the convergence of rays of light reflected or refracted from objects thru strata of air of different densities: a mirage.

aerial liner, same meaning as air liner. see under air

(adjectiv).

aerial machine, a machine or apparatus for air sailing; an air-machine: a balloon.

aerial mammals, the bats.

aerial navigation, navigation of the air; air = navigation; the art of floating, sailing, or flying in the air or atmosfere; aeronautics; aerial flight; aviation.

aerial navigator. see under navigator.

aerial perspectiv, perspectiv in the air; the expression of space by any means, such as sharpness of edge, vividness of color, etc.

aerial photograph, a fotograf taken by means of a camera

suspended in the air, as in a balloon or airship.

aerial poison, miasma.

aerial omnibus, an aerial vehicle designed to carry passengers regularly; a public airship.

aerial railway

I. a railway consisting of guide-rails or a wireway stretcht between posts, supporting and guiding an elongated balloon or aerostat driven by power.

2. a conveying-apparatus or system of transportation by cors suspended from a rail, cable, or rope in the air above them; an aerial tgamway; a wire-rope tgamway; a wirestramway, wireway, or wiresroad; a cablesrailroad or cableway.

aerial scout, a scout or scouting-machine of the air; an aerial observer; an air scout.

aerial ship, a ship for sailing or traveling in the air: an aerial vessel; an airship.

aerial steamer, an airship or flying-machine propeld by

a steamsengin.

aerial telegraphy, telegrafy thru the air, by means of kites.

aerial torpedo, a terpedo designed for action in the air;

also, an airship so manipulated, as by wireless telegrafy

from the ground, as to function in the air like a terpedoboat.

aerial warfare, warfare in the air, carried on by means of

aerial wheel, a wheel fitted with planes or blades, de-

signed for lifting or propelling an airship.

aerialism .e'i.-zi-ə.tızəm n. [also spelt aërialism] aerial

navigation; aeronautics; aviation.

aerialist e'i:-zi-o-list n. [also spelt aërialist] one who is oc-

erialist e. r.-21-3-11st m. laiso spen aerians; one who is occupied with matters aerial; aeronaut; aviator. aerially e'r.-21-3-11 adv. [also spelt aerially] in an aerial

manner.

aerian "e'ı:-zi-ən adj. [also spelt aërian] aerial.

aerie 'ee-9-zi adj. same meaning as aery.

aerie 'e:-zi, 'i:-zi n. same meaning as aery.

aeriferous, ee-ə'zıfə-zəs adj. [also spelt aëriferous] convey-

aeriform 'ee-əzi,fe:zm adj. [also spelt aëriform] having the

form or nature of air; gaseous.

aeritime 'ee-əzi,taim adj. [also spelt aëritime] of or pertaining to the air, or aerial navigation, employments, or interest: as, *aeritime law.

aero 'se-ə,zo adj. [also spelt aëro] aeronautical; aerial.

aero 'ee-ə,zo n. [also spelt aëro] an aeronautical apparatus; an aerocar; an airship; an aeroplane.

aerobat 'ee-əzə,bæt n. [also spelt aërobat] a dırıgible balloon or airship; a flyingemachine; an aerodrome.

aerobate 'ee-əzə, bet intr. [also spelt aërobate] walk (as rf) en air.

aerobatic ,ee-əzə'bætik adj. [also spelt aërobatic] pertaining to an aerobat.

aerobatics, ee-əzə'bætiks n. [also spelt aërobatics] the ort of constructing and using aerobats or airships; aerial navigation: aeronautics.

aerobiplane, ee-əzə'baı,pzeen n. [also spelt aërobiplane] a flying-machine exhibited by D. S. Brown in England in 1873-4, consisting of two planes of equal size; placed one before the other in the same plane, and connected by a rod.

aerocar 'ee-əzə,kuz n. [also spelt aërocar] a car, conveyance, or vehicle for traveling in the air; an aeronautical car or vessel; an airship; a flyingsmachine; a flyer. aeroclinoscope, ee-əzə'klai-nə,skop n. [also spalt aëroclinoscope] a wethersignal consisting of a vertical axis with movable arms either of which may be raised or deprest according to the increase or decrease of the barometric pressure in the quarter to which it points, thus showing the direction of the wind and state of the wether to be expected.

aero-club 'ee-ə-zə,klab n. [also spelt aëro-club, aero club] a

club devoted to aeronautics; an aviation-society.

aerocondenser, ee-zz-kən'densəz n. [also spelt aërocondenser] a system of tubes thru which the steam in a steamengin is pust and condenst into water by circulation of the outer air around the tubes.

aerocruiser 'ee-əzə,ksou-səz n. [also spelt aërocruiser] a

cruiser of the air; an airship used for cruising.

aerocurve 'ee-əzə,km:zv n. [also spelt aërocurve, aerocurv]

1. a curvd aerofoil; a thin mobile structure, natural or ortificial, adapted to sustentation and presenting a curvd surface to the air.

2. a flying-machine or glider in which the sustaining-surfaces are aerocurvs; a soaring-machine with curvd supporting-surfaces; an aerocury flyer.

aerocyst 'ee-əzə,sist n. [also spelt aërocyst] in plants, an

air=vessel or bladder; an air=cell.

aerodock 'ee-əzə,dek n. [also spelt aërodock] a deck for air-

ships; an airship-shed.

aerodone 'ee-əzə,don n. [also spelt aërodone] a glidings or soaringsmachine, especially one which is destitute of propellingsapparatus or auxiliary ports.

aerodonetic , ee-ə-zo-də'netik adj. of aerodones, etc.

aerodonetics, ee-a-zo-do'netiks n. [also spelt aërodonetics] the science of aerodones, or gliders and soarers; know-ledge of aerodromes, birds, insects, and other flyers or flying creatures, in flight; that portion of aerodromics or aviation not included in the aerodynamics of flight; the study of soaring flight.

aerodrome 'ee-əzə,drom n. [also spelt aërodrome]

1. a glidings or soaringsmachine, especially the tandem monoplane invented by S. P. Langley and successfully tested by him near Washington, D. C., in 1896; a powers driven aerodone; a flyingsmachine; an aeroplane; a flyer.

2. a house or shed for storing an airship; a balloon-shed;

an airship=garage.

3. a course, track, or ground where airships or flyers are tested or flown; an aviation course; a flying-ground.

aerodromic ,ee-əzə'dromik adj. [also spelt aërodromic] of aerodromes.

aerodromic radius, see under radius.
aerodromic wingscenter, see under wingscenter.

aerodromics, ee-əzə'dromiks n. [also spelt aërodromics] the science of aerodromes or flying-machines; knowledge of natural or artificial flyers; the study of aerial flight; aviation.

aerodromometer, se-a-za-dra/momi-taz n. [also spelt aëro-dromometer] an instrument for mesuring the velocity of gaszstreams devised by Zwaardemaker of Utrecht, Hølland.

aerodynamic ,ee-o-zo,dar'næmik adj. [also spelt aërodynamic] of or pertaining to the energy of gaseous fluids; relating to the forces of the air, atmosfere, and other gases, in motion.

aerodynamic balance, a device in which an aeroplane or other aerofoil is balanced and rotated about a vertical axis, so that the pressure of the air upon it may be studied.

aerodynamic radius, see under radius.

aerodynamic wingscenter, see under wingscenter.

aerodynamical, ee-ə-zo,dai'næmi-kəl adj. [also spelt aërodynamical] pertaining to aerodynamics; relating to motion thru the air.

aerodynamically ,ee-ə-zə,daı'næmıkə-lı adv. [also spelt aërodynamically] ın an aerodynamıc manner; ın respect to aerodynamıcs

aerodynamics , ee-ə-zə, dar'næmics n. [also spelt aërodynamics] the dynamics (especially the kinetics) of aeriform bodies or gaseous fluids; the science of the forces of the air or atmosfere, and other gases.

aerodyne 'ee-əzə,dain n. [also spelt aërodyne] a power=

driven flyer of the aeroplane type.

aerofoil 'ee-əzə, foil n. [also spelt aërofoil] a thin structure, plane or curvd, natural or artificial, adapted for motion and sustentation in the air; an aeroplane or aerocurv; a wing, or the wings collectivly, of a flyer.

plane aerofoil, an aerofoil whose surfaces are plane; a

simple aeroplane; an aeroplane (sense 1).

aerognosy, ee-ə'zognə-sı [also spelt aërognosy] same mean-

aerogram 'ee-sze,gzæm n. [also spelt aërogram] a message tgansmitted thru the air by wireless telegrafy; a Hertzianswave telegram; a wireless message.

aerographer ,ee-ə'zogzə-fəz n. [also spelt aërographer, aerografer] one who describes the air or atmosfere; a meteorologist.

aerographic ,ee-əzə'gzæfik adj. [also spelt aërographic, aerografic] of aerografy.

aerographical ,ee-əzə'gzæfi-kəl adj. [also spelt aërographical. aerografical] same meaning as aerographic.

aerography ,ee-ə'zogzə-fi n. [also spelt aërography, aerog-

rafy] a description of the air or atmosfere.

aerolite 'se-əzə.lait n. [also spelt aërolite] a stone or portion of solid matter which has fallen thru the air or atmosfere to the earth from outer space; a meteorite.

aerolith 'ee-əzə lit n. [also spelt aërolith] same meaning as

aerolite.

aerolithology , ee-ə-zo-li'delə-dzi n. [also spelt aërolithol-

newl the science of aeroliths or aerolites.

aerolitic .ee-əzə'litik adi. [also spelt aerolitic] of aerolites; meteoric.

aerolocomotion ,ee-a-za,loka'moo-san n. salso spelt aërolocomotion] locomotion thru the air or atmosfere.

aerological ,ee-əzə'ledzi-kəl adj. [also spelt aërological] of aerology; aerologic.

aerologist .ee-ə'zelə-darst n. [also spelt aërologist] one verst

in aerology.

aerology see-ə'zolə-dzi n. [also spelt aërology] the science of the air, especially of the upper air; the study of the earth's atmosfere; aerognosy; aerofysics.

aeromad 'se-əzə, mæd adj. mad or crazy about aeronautics,

aeroplanes, or aviation; afflicted with flyingsfever.

aeroman 'ee-əzə.mæn n. an airman; an aviator.

aeromancer 'ge-əzə mænsəz n. [also spelt aëromancer] one who practises aeromancy.

aeromancy 'ee-əzə, mænsı n. [also spelt aëromancy]

1. divination by means of the air and winds or other atmosferic fenomena.

2. the art of forecasting changes in the wether.

aerometer .ee-ə'zomi-təz n. [also spelt aërometer] an instrument for ascertaining the weight or density of the air and other gases.

aerometry ,ee-ə'zomi-tgi n. [also spelt aërometry] the science of mesuring the weight or density of air and other gases, and of determining the laws of their pressure, elas-

ticity, rarefaction, and condensation; pneumatics.

aeromobile ,ee-ə-zə-mə'biil n. [also spelt aëromobile] a vehicle which moves thru the air; an automobile of the air: an airship; specifically, a flying-machine of the helicopter type, designed by E. Berliner of Washington, D. C.

aeromotor 'ee-əzə,moo-təz n. [also spelt aerosmotor, aëro-

motorl

1. a motor-vehicle for navigating the air; a motor-driven airscraft: an airship.

2. a motor or power-plant for use in an aeroplane; an airshipsengin.

aeronat 'ee-əzə,næt n. [also spelt aëronat] a dırıgible bal-

loon: a lighter-than-air airship.

aeronaunomy ,ee-əzə'nc:-nə-mi n. [also spelt aëronaunomy]

management or regulation of aeronautre affairs.

aeronaut 'ee-əzə,nc:t n. [also spelt aëronaut] one who sails, flies, or floats in the air; an aerial navigator; a balloonist; an operator or pilot of an airscraft; an airman; an aviator.

aeronautic ,ee-əzə'nc:-tik adj. [also spelt aëronautic] pertaining to aerial navigation.

aeronautica "ee-əzə'nc:-tr-kə n. [also spelt aëronautica] same meaning as geronautics.

aeronautical ,ee-əzə'nc:-ti-kəl adj. [also spelt aëronautical] same meaning as aeronautic.

aeronautically ,ee-əzə'nc:-trkə-li adv. [also spelt aëronautically] in an aeronautic manner; with respect to aeronautres.

aeronautics , se-əzə'nc:-tiks n. [also spelt aëronautics] the art or practis of sailing, flying, or floating in the air; aerial navigation; ballooning. compare aviation.

aeronautism 'ee-əzə,nc:-tizəm n. [also spelt aëronautism] the practis, sport, or occupation of sailing, floating, or fly-

ing in the air; aeronautics; aviation.

aeronavigation ,ee-ə-zə,nævı'gee-sən n. [also spelt aëronavigation] the navigation of the air; aerial navigation.

aeronavigator , ee-əzə'nævı, getəz n. [also spelt aëronavigator; a navigator of the air; an aerial navigator; an aero-

naut: an aviator.

aeronef 'ee-əzə,nef n. [also spelt aëronef] an airship; specifically, any flying-machine which has no gas-vessel; any hevier-than-air flyer, as an aeroplane, helicopter, or ornithopter.

aeronon 'ee-əzə,nen n. [also spelt aëronon] a dırıgible balloon or airship, especially one whose equipoise and move-ments resemble those of a fish or other swimming creature.

aerophilous ,ee-ə'zofi-ləs adj. [also spelt aërophilous, aerofilous] air-loving: said of certain organisms.

aerophobia ,ee-əzə'foo-bi-ə n. [also spelt aërophobia, aerofobial fear or dred of air: aerofoby.

aerophobic ,ee-əzə'foo-bik adi. [also spelt aërophobic, aero-

fobic] of aerofobia; afraid of air. aerophoby ,ee-ə'zofə-bi, 'ee-əzə,fobi n. [also spelt aëropho-

by, aerofoby] same meaning as aerophobia.

aerophysical ,ee-əzə'fızı-kəl adj. [also spelt aërophysical, aero-physical, aerofysicall of aerofysics; of or pertaining to the fysical features, conditions or properties of the air or atmosfere, as heat, cold, dryness, humidity.

aerophysicist se-əzə'fizi-sist n. [also spelt aërophysicist, gerofysicist] one skild in aerofysics; a meteorologist.

aerophysics ,ee-əzə'fiziks n. [also spelt aërophysics, aerofusical the fusics of the atmosfere.

aerophyte 'ee-əzə.fait n. [also spelt gerophyte, gerofyte] an

air=plant. aeropirate 'ee-əzə,pai-zət n. [also spelt aëropirate] a pirate

of the air: a piratical airship.

aeroplane 'se-əzə,plsen, (improperly) 's:-zə,plsen, 's:-zi-ə-

preen n. [also spelt aëroplane, aëroplane]

1. a thin plane, natural or ortificial, adapted to motion and sustentation in the air; a plane or curvd aerofoil; an air-plane; a wind-plane; a sustaining, supporting, or glidingsplane, or wing, in a flyer.

ballasted aeroplane, an aeroplane equilibrated by means

of ballast, for experimental purposes,

inclined aeroplane, an aeroplane or plane aerofoil which is in an inclined position in the air or other fluid, as in aerodynamic experimentation: distinguisht from horizontal plane.

simple aeroplane, an aeroplane having simple curvature;

a plane aerofeil.

wave-action aeroplane, a flexible aeroplane or aerofoil designed to afford sustention or propulsion to a flying-ma-

chine by being rapidly undulated; a wave-surface.

2. any flying-machine supported or sustaind in the air by one or more aeroplanes or aerocurvs; a flyer whose supportingssurfaces are fixt structures having plane or approximately plane gliding surfaces; a hevier than air airship upheld or sustaind primarily by the pressure or reaction of the atmosfere upon plane or curvd surfaces moving at an angle with the axis of flight or with the line of direction of the pressure of the air; a motor-driven glidingor soaringsmachine; a glider: distinguisht from helicobter and ornithopter.

helicopter aeroplane, an aeroplane flyingsmachine combined with a helicopter; a combination of a helicopter

with an aeroplane, as that designed by Bertin.

aeroplane 'Ee-əzə,pleen adj. [also spelt aëroplane]

1. consisting of, or having the form of an aeroplane or

aeroplanes: as, *aeroplane rudders.

2. having the characteristics of, or related to, airships of the type known as the aeroplane: as, an *aeroplane flying= machine, the *aeroplane type of flyer, *aeroplane flight.

aeroplane 'ee-əzə,pleen intr. [also spelt aëroplane] navigate the air in an aeroplane; drive an aeroplane flyer; plane.

aeroplane-accident 'se-əzə-pleen, ksr-dnt n. an accident to an aeroplane flying-machine; a disaster incidental to

aeroplaning.

aeroplane-experiment 'se-əzə-pzsen-ik,spszi-mənt n. an experiment in constructing or managing aeroplanes or flying-machines.

aeroplane-flight 'ee-əzə-pleen,flast n. [also spelt aëroplane-flight] a flight in or of an aeroplane flying-machine.

aeroplane-owner 'ee-əzə-pleen,oo-nəz n. [also spelt aëroplane-owner] the owner of an aeroplane; one who owns an aeroplane flyer.

aeroplaner 'ee-əzə,plee-nəz n. [also spelt aëroplaner] one who drives or operates an aeroplane; an aeroplanist.

aeroplane-race 'se-əzə-pleen,zees n. a race by aeroplane

flying-machines; a match of aeroplanes.

aeroplane-term 'ee-əzə-pleen,ts:zm n. [also spelt aëroplanesterm] a term used especially in reference to aeroplanes; a word peculiar to the ort of aeroplaning.

aeroplane-tour 'se-əzə-preen,to:z n. an airstour made by means of aeroplane flyingsmachines; an extended trip by

aeroplane.

aeroplane-work 'ee-əzə-pleen,wB:zk n. [also spelt aëroplanezwork] work done by, or by means of aeroplanes; the

performances executed by aeroplanists.

aeroplaning 'ee-əzə,plee-nin n. [also spelt aëroplaning] the art, occupation, or sport of driving or operating aeroplanes; the act or process of flying in a machine of the aeroplane type; the action of soaring or gliding in a flyer.

aeroplanist 'ee-əzə,plee-nist n. [also spelt aëroplanist] one skild in operating an aeroplane; one who practises the sport or occupation of aeroplaning; an aviator who uses a

flyer of the aeroplane type.

aeropleustic ,ee-əzə'pzou-stik adj. [also spelt aëropleustic] of or pertaining to navigation of the air; aeronautic.

aero-radius 'ee-a-zo,zee-di-as n. the radius of action of an aeroplane or airship; action-radius; cruising-radius.

aerosack 'ee-əzə,sæk n. [also spelt aërosack] a sack or bag with a hoop in its mouth, mounted on a stick and supported by the wind, similarly to the Japanese Mayscarp.

aeroscaphe 'ee-əzə,skeef n. an airzboat or aerial skiff proposed by de Louvrié in 1863, consisting of a supportingplane stiffend by cords fastend to a mast above and to a car below and capable of being folded or reeft.

aeroscepsy 'ee-əzə,skepsi n. [also spelt aëroscepsy] ability

to perceiv the state of the air or atmosfere; susceptibility to atmosferic conditions, such as insects, snails and certain other animals are supposed to possess: the sense of acros-

aeroscope 'ee-əzə,skop n. [also spelt aëroscope] an apparatus for collecting microscopic objects from the air, consisting of an inspirator and a glass collecting-vessel smeard with alveerin.

aeroscopie ,ee-əzə'skepik adj. [also spelt aëroscopic] pertaining to or expressing aeroscopy.

aeroscopy ,ee-ə'zoskə-pi n. [also spelt aëroscobv]

1. divination by means of the air; wether-profecy.

2. examination or observation of the atmosfere: the

practis of meteorology.

3. (in zoology) the exercise of the faculty of aeroscepsy. aerosiderite ,ee-əzə'sıdə,zait n. [also spelt aërosiderite] a meteorite consisting essentially of metallic iron.

aerosiderolite "ee-əzə'sıdəzə,lait n. [also spelt aërosidero-

litel a meteorite containing both stone and iron.

aerosphere 'ee-əzə, sfi:z n. [also spelt aërosphere, aerosfere] the body of air which surrounds the earth; the aerial globe; the entire atmosfere.

aerostat 'ee-əzə,stæt n. [also spelt aërostat]

1. an apparatus which will float or sustain itself in the air; specifically, a balloon or a lighter-than-air airship.

2. (rare) an aeronaut; a balloonist.

3. (rare) a tracheal dilatation constituting an air sac, as in the abdomen of the honeysbee.

aerostatic ,ee-əzə'stætik adj. [also spelt aërostatic]

1. pertaining to aerostatics (sense 1).

aerostatic balance, an instrument, constructed on the same principle as the barometer, for ascertaining the weight of the air.

2. pertaining to aerostatics (sense 2) or aerostation; aero-

nautrc.

aerostatic park, a balloonspark.

aerostatica ,ee-əzə'stætī-kə n. [also spelt aërostatica] same meaning as aerostatics.

aerostatical ,ee-əzə'stæti-kəl adj. [also spelt aërostatical] same meaning as aerostatic.

aerostatics , ee-əzə'stætiks n. [also spelt aërostatics]

1. the statues of the air and other gases; the science of aeriform or gaseous matter in equilibrium.

2. the art of ballooning; aerostation; balloonry. aerostation .ee-əzə'stee-sən n. salso spelt aërostation]

1. (obsolete) aerostatics (sense 1).

2. the ort or practis of using or managing aerostats; aerial navigation; ballooning.

aero-surface 'ee-əzə,sezfis n. a material surface, as in a kite, used for aerial sustention or the like; an aerofoil.

aerotherapeutics ,εe-əzə-θεzə'pçou-tiks n. [also spelt aërotherapeutics] the treatment of disease by varying the pressure and modifying the composition of the air surrounding the patient.

aerotube 'ee-əzə,tçoub n. [also spelt aërotube] a proposed flying-machine of the aeroplane type with tubular sustaining-surfaces designed by W. Pars of Seattle, Washington.

aeroyacht 'ee-əzə,jet n. [also spelt aëroyacht] an aerial yacht; a fancied airship of the racing or cruising type; a plesure-ship of the air.

aery 'ee-ə-zi adj. [also spelt aerie] airy, aerial; ethereal.

aery 'E:-zī, 'I:-zī n. [also spelt aerie; synonymous cognates airy, eyry, eyrie; ploral aeries]

1. the nest of a bird of prey, as an eagle or a hawk; a

lefty nest of any large bird.

2. the brood in the nest; the young of a bird of prey.

3. an elevated habitation of situation.

aery 'E:-zi intr. bild or have an aery.

afflux 'x, flaks n. a flowing to or toward, as of air; affluxion; inflow: the opposit of efflux.

afloat o'froot adv. in a floating or suspended condition; buoyd up or sustaind in or on a fluid; in stable or moving equilibrium in the air.

aft a:ft adv. in or near the hinder part or stern of an air-

ship; toward the stern.

fore and aft, from the fore toward the after part or vice

versa; lengthwise; longitudinally.

after 'a:f-təz adj. located in the rear; as, the *after side of a bird's fether; also, situated nearer the stern or hinder portion of an airship; belonging to the sternward part.

after-car 'a:f-təz,ka:z n. the car situated toward the stern:

the hindermost car in an airship having two cars.

after-cell 'a:f-təz,sel n. the rear or hinder cell of a cellular kite.

afterglow 'a:f-təz,gloo n. the glow often seen in the western sky after sunset.

afterpart 'a:f-təz,pa:zt n. the after or hinder part, as of an airship; the rear portion; the stern.

aftershaft 'a:f-təz, (a:ft n. a supplementary shaft or father growing out of the stem of a bird's father; a hyporachis; a hypoptilum. compare foreglow.

aileron 'se-li,zon n. a little wing or wing-like part; a

hinged wingstip in an aeroplane for maintaining lateral

balance; a stabilizingsplane; a balancingsplane.

aileron-work 'se-li-zon, wB:zk n. work executed by an aeroplanist by means of ailerons; balancing-work done by the aid of independently-moving wing-tips.

aileroon .ee-li'zuun n. same meaning as aileron.

air e:z n.

1. the transparent, colorless, gaseous substance which envelops the earth; also, occasionally, any particular portion or region of the atmosfere: as, to sail the *airs.

inflammable air, hydrogen gas.

open air, the unconfined space outside bildings, etc. exposed to the wether.

take the air, start off to fly or float in the air, as an aeroplane when leaving the ground; begin flight; take to the air.

take to the air, same meaning as take the air.

2. the whole body of the air surrounding, or above the surface of, the earth; the (apparently) free space above our heds: the atmosfere.

high air, the open (higher) air; the highway of the airy regions; that port of the air which is not within the jurisdiction of any nation.

upper air, the upper or higher regions of the air or atmos-

fere; the higher atmosfere.

3. a special state or condition of the atmosfere; wether, climate: as, night *air, one's natav *air.

4. air in motion; a breeze or light wind; a current. or

draft; as, there is no *air to speak of tonight.

light air, an air or breeze (numberd I in Beaufort's scale) having a velocity of about 1.7 meters per second.

air e:z adj. of or pertaining to the air; also, used in the air; as, an *air propeller.

air liner, a liner or passenger-ship of the air; an airship supposed to make regular point toppoint trips; an aerial liner.

air motion, the motion of the air; the mode of movement of the currents of the atmosfere.

air power, same meaning as air-power.

air propeller, same meaning as air-propeller.

air-bag 'e:z.bæg n.

1. a bag or secondary balloon containing air and carried inside the gasbag or gas-vessel of a balloon or airship, or an air space in or between the parts of a balloon envelop, for maintaining the shape of the main envelop or for requlating ascent and descent.

internal air-bag, an air-bag placed inside of the main gasbag or envelop of a balloon or airship to preserv the form of the gasbag or the tautness of the envelop, or to regulate ascent and descent; a ballonet.

2. a bag containing air for breathing purposes, sometimes taken along in a balloon for use in emergencies.

3. a sferical or cylindrical bag inflated with air, used to

convey signals from balloons.

4. a bag inflated with air taken along in a flying-machine for use as a float for the machine or as a life-preserver for the aviator, in case of falling into water.

air-ball 'ɛ:z,bc:l n. a toy rubber ball inflated with air.

air-balloon 'e:z-bə,loun n. [also spelt air balloon]

1. (in fireworks) same as balloon (sense 1).

2. a balloon inflated with hydrogen or some light gas other than heated air; an inflammable-air balloon: distinguisht from fire-balloon (sense 1) and hot-air balloon, under balloon (sense 2).

3. a balloon or bagslike receptacle, as at the lower port of the gassbag of a Clements Bayard drrigible balloon, de-

signed to contain air for regulating the craft.

air-ballonet 'e:z-bælə,net n. [also spelt air-ballonette and, less properly, air-ballonnet, air-balloonet] a ballonet fild with air.

air-balloonist 'e:z-bə,lou-nıst n. one skild in making ascents in, or managing air balloons; a balloonist; an aeronaut.

air-beaten 'e:z,bii-tn adj. wether-beaten from long exposure to the air.

air-billow 'e:z,bilo n. a billow of air; a long gentle airs

air-bird 'e:z,be:zd n. a bird which habitually lives in the air: distinguisht from landsbird and watersbird.

air-bladder 'e:z,blædəz n. a bladder or sac fild with air, as in an insect or plant; an air-float; also, the swimmingbladder of a fish.

air-blower '8:z,bloo-əz n. a machine for blowing air; a blower.

air-boat 'e:z,boot n. [also spelt airboat] a boat or vessel for sailing in or navigating the air; an airship; a sky-boat.

air-bomb 'e:z,bom n. [also spelt air bomb, airsbom] a bom designed for use in the air, or adapted for being thrown from an airship.

air-bone 'e:z,boon n. a hollow bone containing air, as in birds.

air-borne 'e:z,bo:zn adj. borne or carried on or in the air.

air-bottle 'e:z,botl n. a bottle used for collecting and containing a sample of atmosferic air, as while ballooning at certain heights or in certain localities.

air-buoy 'e:z,bou-i n. a buoy designed to float or sustain it-

self in the air or atmosfere.

air-car 'e:z,ka:z n.

1. a cor designed to travel thru the air; an aerial cor; an air-machine; a flying-machine.

2. a modified balloon or aerostat designed to travel upon

the wires or rails of an aerial railway.

air-cell 'e:z,sel n. one of the numerous cells or cavities in birds, insects, and certain other flying creatures (and also, sometimes, in animals which do not fly), held by some to be related to respiration or aeration of the blood and by others to be related to the equilibrating or balancing of the body in flight.

air-chamber 'e:z,tjeem-bez n. a chamber or cavity fild with air in an animal or plant, as the camera or loculus in the

nautilus.

air-chauffeuring 'E:z-So,fB:-zxn n. chauffeuring in the air; the driving of aeroplanes or other flying-machines in the manner characteristic of a traind chauffeur.

air-cooled 'e:z,kould adj. coold by air; having the condensing apparatus coold, and the containd gas condenst by circulation of the outer air: as, an *air coold motor.

air-craft 'e:z,ksa:ft n. [ploral air-craft] a craft, vessel, or ship for sailing in the air; an airship; a flying-machine. aircraft 'e:z,ksaft n. the craft or tgade having to do with

the air; the ort of aerial navigation; aviation.

air-cruise 'e:z,ksouz n. a cruise, or sail to and fro, thru the air: an aerial cruise.

air-eruiser 'e:z,ksou-zəz n. an aerial cruiser; an ormd airship designed for swift transport, etc.

air-current 'e:z,kszənt n. a current or stgeam of air; an atmosferre current.

air-dash '&:z,dæ n. a dash or sudden flight into or thru the air.

air-disturbance 'ɛ:z-dɪ,stɒ:z-bəns n. a dɪsturbance of the air; a commotion or turbulence due to atmosferic currents. airdom 'ɛ:z-dəm n. the dominion of the air; the domain or

airdom 'ɛ:z-dəm n. the dominion of the air; the domain or relm of the atmosfere.

air-drainage 'e:z,dree-nid3 n. the habitual movements of the air near the surface of the ground; the ground currents, collectivly, which characterize the atmosfere above a given land area.

air-drift 'e:z,drift n. the drift or stedy course of the air;

the movement of the atmosfere as driven along by the forces acting on it.

air-fight 'e:z,fait n. a fight or battle which occurs in the air or atmosfere; an aerial battle.

air-filled 'e:z,fild adj. [also spelt air=fild] fild with air, as a firesballoon or an airsbag.

air-fleet 'E:z,fLiit n. a fleet of airships; an aerial fleet.

air-flight 'e:z.flait n, a flight in the air: an aerial flight. air-float 'e:z.fzoot n. a float or air bladder in certain algae, serving to buoy the plant up in the water; an air-vesicle.

air-flow 'e:z.floo n. the flow or movement of the air; the streaming movement of the atmosfere.

air-flyer 'e:z,flai-əz n. [also spelt air-flier] a machine designed to fly in the air: a flying-machine.

air-flying 'e:z.flai-in n. the art of artificial flight thru the

air; human flight; aviation.

air-friction 'e:z,fsikson n. the friction of the parts of a moving mechanism against the surrounding air, as distinquisht from the friction of the bearingsurfaces; the wind-

air-gage 'e:z.geed3 n. [also spelt air-gauge] a gage or instrument for mesuring the pressure of air or gases.

air-gliding 'e:z,glar-din n, the art of gliding or skimming thru the air.

air-going 'e:z,goo-in adj. adapted for going into the air; designed or fit for air-flight, or for use in the air as, *airgoing craft; *air=going artillery.

airgonaut 'e:z-qə,nc:t n. an aeronaut; an Argonaut of the air: an air sailor.

air-harbor 'e:z,ha:z-bəz n. a harbor, on the earth, for use

or shelter of airships.

air-hog 'e:z,hog n. a human hog of the air; an aeronaut who drops sand-ballast on pedestrians, or acts as if he ownd the whole atmosfere.

airhole 'e:z,hoot n. [also spelt airshole] a hole or orifis thru

which air may escape or enter.

air-inflated 'e:z-in,flee-tid adj. inflated or fild with air. as a bag.

air-jockey 'E:z,d30ki n. a jockey who rides in the air: the rider or driver of an airship; an expert aviator.

air-jockeying 'E:z,d3eki-in n. the action of jockeying or riding skilfully in the air.

air-journey 'E:z,d3BZn1 n. a journey in the air; an airstrip. air-king 'E:z,kin n. a king of the air; a champion aviator. air-lane 's:z.keen n. a lane or road thru the air; an air-road;

an airway.

air-layer 'e:z,lee-əz n. a layer or stratum of air.

airless 'e:z-las adi. destriute of air: without air: as, *airless space.

air-level 'e:z,level n. a level, or a horizontal plane or tract of constant altitude, in the air; a reach of atmosfere at a certain height above the earth.

air-line 'e:z.lain n. [also spelt air line]

1. a line as direct as tho drawn or stretcht straight thru the air: a bee=line.

2. a line of transportation thru the air: an aerial line of

travel or transport.

air-log 'e:z,log n. a device for mesuring the rapidity of an airship's motion.

air-machine 'e:z-ma. (rin n. a machine designed to fly in

the air; a flyingsmachine.

airman 'e:z-mən n. [ploral airmen] a man skild in managing air-craft: a workman used to working on airships; a sailor of the air: an aeronaut; an aviator.

air-manometer 'e:z-ma, nomi-taz n. same meaning as air=

airmanship 'e:z-mən, sip n. the art or skill of a good airman; the practis of managing balloons or airscraft; aeronautism; aeronautics; aviation.

air-mass 'e:z,ma:s n. a mass or volume of atmosferic air.

air-mastery 'E:z.masta-zi n. mastery of the air by man thru the attainment of the power to fly; the conquest of the

air-meet 'e:z,mit n. same meaning as air-meeting.

air-meeting 'e:z.mii-tin n, a meeting or concourse of aviators for practis or races in the air; an air-meet; a flyingmeet.

airmen 'e:z-mon n. pl. see airman.

air-meter 'e:z,mii-təz n. an apparatus for mesuring the quantity or rate of flow of air.

air-mixture 'e:z,mikstsoz n. the mixture or composition of the air or atmosfere: the constitution of an air mass.

air-naval adj. of an air navy; pertaining to aerial navies. air-navigation 'e:z-nævi.gee-son n. [also spelt air navigation] navigation of the air or atmosfere; aerial navigation.

air-navigator 'e:z,nævi-qetəz n. a navigator of the air; an airsailor.

airometer ,e:z'omi-təz n. same meaning as air-meter.
air-pilot 'e:z,pai-lət n. a pilot who works in the air; the pilot or driver of an airship; an aviator.

air-pipe 'e:z,paip n. [also spelt air pipe] an airstube.

air-plane 's:z.pr.sen n.

1. (rare) a plane designed to glide thru the air; an aero-plane.

2. (rare) an imaginary inclined plane in the air.

3. an air-level: as, Morsant sought the higher *air-planes.
air-plant 'e:z,plaint n. a plant which derives, or appears to derive its nourishment from the air exclusivly, as certain epifytic orchids and bromeliaceae; an aerofyte.

air-power 's:z,pou-sz n. political or commercial power or influence due to the control of the air; aerial strength.

air-pressure 'e:z,psesoz n. the pressure of the air; atmosferic pressure; barometric pressure.

air-proof, e:z'psouf, (assumptivly) 'e:z,psouf adj. impervious

to air; airstight.

air-proofing 'e:z,psou-fin n. a rendering proof against the passage of air, as the envelop of a gas-vessel; a making air-tight or impervious to air.

air-propeller e:z-psə,peləz n. a propeller designed for use in the air: an airship-propeller: an aerial propeller: an air-

screw.

air-pump 'e:z,pamp n. a pump or machine for the exhaustion, compression, or transmission of air.

air-race 'e:z,zees n. a race in the air; a flying-race.

air-racer 'ezzee-səz n. one who races in the air; a racing aviator; also, an aerial racing-machine; a speed-machine.

air-rarefaction 'e:z-zæzī,fækjən n. rarefaction of the air; atmosferic rarefaction.

air-reaction 'e:z-zi,æk\on n. the reaction of the air, as upon a flying-machine.

air-resistance 'E:z-zi,zistəns n. the resistance of the air or atmosfere.

air-road 'e:z,zood n. a road of air; a way or highway in the air; an airway; an airslane; a skysroad.

air-route '8:2,20ut n. a route of travel thru the air; a course or line of air-travel.

air-runner 'E:z,zanəz n.

1. an apparatus or machine which runs or courses thru the air or atmosfere; an aerodrome; an aeroplane; a flyer,

2. something that runs thru, or pierces the air or atmosfere, as a Hertzian wave.

air-sac 'e:z,sæk n. [also spelt air-sack]

1. one of the membranous sacs or bag-like receptacles in the hellow bones and the cavities of the body of birds, which communicate with the lungs; a large airscell; an airspace; an airspace; a pneumatocyst.

2. one of the sacs or elongated cavities which form the

ultimate branches of the lungs of animals.

air-sack 'e:z.sæk n, a sack or bag inflated with air, as in a kitesballoon; an airsbag.

airsailer 'e:z.see-lez n. an apparatus for sailing in the air; a glider: a flyer.

air-sailing 'e:z,see-lin n. the art of sailing in the air; air= navigation.

air-sailor 'e:z.see-loz n. a sailor of the air; an aeronaut; an airman.

air-scout 'e:z, skout n. a scout who operates in the air; an aerial observer.

air-screw 'e:z.sksou n. a screw propeller used in or acting on the air: an air propeller.

air-shark 'e:z, sa:zk n. a dangerous or shark-like species of air craft conceived as being useful in war: an aerial shork.

air-shield 'e:z, sild n. [also spelt airshield] a shield, on an

airscraft, for protection against the air.

airship 'e:z. (ip n. a ship or vessel designed for sailing in or navigating the air: an aerial ship: a balloon; an air-machine: a flying machine; an aeroplane; a flyer; also sometimes, specifically, a dirigible balloon or aeronat, as distinguisht from a heaviersthansair flyingsmachine or aeronef.

buoyant airship, an airship which is buoyant or capable of floating or remaining suspended in the air without the aid of liftingsmachinery, or aeroplanes; a lightersthansair airship: a dirigible balloon; an aeronat.

airship-ascension 'e:z-(ip-a.sen(an n. an ascension or ascent into the air, made by an airship, dirigible balloon,

or flyingsmachine.

airship-battalion 'e:z-sip-battalion n. an army battalion whose duty it is to operate or tend the government airships.

airship-commander 'E:z-Sip-kə,ma:n-dəz n. the commander or captain of an airship.

airship-company 'E:z-Sip,kampa-ni n. a company or corporation whose business it is to operate airships.

airship-construction 'e:z-sip-kən,straksən n. the construction or bilding of airships.

airship-driver 'e:z-sip,drai-vəz n. one who drives an airship: a chauffeur of the air.

airship-engine 'e:z-sip, endzin n. [also spelt airship:engin] the engin or driving-machinery of an airship; the motor or power-plant of a flying-machine.

airship-flight 'e:z-Sip, frait n. a flight made by airship: as.

a transatlantic *airship=flight.

airship-gazer 'e:z-sip,gee-zoz n. one who gazes or looks expectantly skyward for airships.

airship-hall 'e:z-sip,hc: n. a hall or house for sheltering airships; the hanger or shed at an airstation; an airships house.

airship-harbor 'e:z-sip,ha:z-bəz n, a harbor or refuge, on the ground, for airships; an earth-horbor for air-craft.

airship-house 'e:z-sip,hous n. a house where an airship or dirigible balloon is kept; a balloon-house; a balloon-shed; an aerodrome.

airship-line 'e:z-sip,lain n. a line for point-to-point transportation by airship; an aerial transport line.

airshipping 'e:z, sipin n. [also spelt airshipping] the use of

airships; aerial navigation.

airshipshape 'e:z-(ip.(sep adi, in the shape or condition appropriate or usual for a good airship; shipshape in an aerial sense.

airship-station 'e:z-sip,stee-son n. a station at which airships are kept, as for purposes of defense.

airship-wrecking 'e:z-sip,zekin n, the wrecking or destroving of airships, for criminal purposes.

airsick 'E:z,sik adj. sick or ill because of traveling in the air

airsickness 'e:z,siknis n. a supposed sickness due to mo= tion thru the air: nausea; seasickness.

air-skipper 'e:z,skiper n. a skipper who works in the air;

the captain or driver of an airship; an aviator.

air-space 'e:z,spees n. a space fild with air, as between the two layers of fabric of the double surfacing of an aeroplane.

air-squadron 'e:z,skwodron n. a squadron which operates in the air; an aerial squadron.

air-station 'e:z,stee-son n. a station, on the earth, where airships may arrive and deport.

air-strata 'e:z,stgee-to n. see airstratum.

air-stratum 'e:z,stree-tom n. [ploral airsstrata] a stratum of the air; an airslayer.

air-stream 'e:z,striim n. a stream or current of air; an atmosferic stream.

air-supply 'E:z-sə,plai n. the supply or provision of air, as that available for the use of a fan-wheel or blower.

air-surf 'e:z,sp:zf n, the surf of the air: the aerial surf: the swell of the breaking air-currents or winds.

air-swirl 'e:z,swe:zl n, a swirl or eddy in the air: an atmosferic vertex or whirl.

air-tight , e:z'tait, (assumptivly) 'e:z,tait adj. so tight or close as to be impermeable to air; air proof.

air-tour 'E:z,tu:z n. a tour or journey in the air; an airstrip.

air-touring 'e:z,tu:-zin n. the making of airstours; airs travel.

air-track 'e:z,træk n. [also spelt airtrack, air track] a track or definit course in the air: an aerial race-track.

air-traveler 'E:z,tgævə-ləz n. [also spelt airstraveller]

1. an apparatus which travels in the air: a dirigible: a flying-machine; an aerodrome.

2. one who travels in the air; an aerial voyager.

air-traveling 'e:z,træve-lin n. [also spelt airstravelling] the art or occupation of traveling in the air.

air-trick 'e:z,trik n. a trick or exploit performd in the air; an exhibition of air sieckeving.

air-trip 'e:z,trip n. a trip or journey in the air; an air: journey.

air-tube 'e:z.tcoub n. a tube for conducting air, as in connection with a ballonet; an airspipe.

air-turbine 'e:z,tB:z-bain n. a wheel of turbinate form driven by the wind or other airscurrent.

air-valve 'e:z,vælv n. [also spelt air=valv] a valv for allowing air to pass.

air-vehicle 'e:z,vii-i-kəl n. a vehicle designed for sailing the air; an aerial vehicle; an airscraft.

air-velocity 'e:z-vr,losi-ti n. the velocity of the air; the rapidity of movement of the atmosfere or the air-currents. air-vessel 'e:z.vesəl n.

1. any vessel containing air, as one of the tracheae or respiratory tubes of an insect, or a spiral vessel in a plant,

2. a vessel or bag inflated or capable of being inflated with air, and placed inside the gas-bag of a balloon for keeping the main envelop in shape, or regulating ascent and descent; an air-bag; an air-chamber.

airward 'e:z-wəzd adv. [synonymous cognate airwards] toward the air; upward; skyward.

air-wave 'e:z.weev n. a wave of air; an atmosferic undulation.

airway 'e:z,wee n. a way or road in the air or atmosfere; an aerial way; an air = road; an air = lane.

air-wheel 'e:z,wiil n. a wheeling or rotary movement of the air or atmosfere; a cyclone or an anticyclone.

air-wizard 'e:z,wizəzd n. a wizard or magician who has power over the air; an aviator endowd with magic powers. air-woman 'e:z, women [ploral air-women] a woman skild

in managing air-craft; a female aviator; an aviatress. airworthiness 'E:z, wBzdi-nis n. the state of being air=

worthy; airworthy character or condition; fitness for servis in the air.

airworthy 'e:z,wbzði adj. [also spelt airzworthy] worthy or fit for servis in the air; staunch and well adapted to encounter stormy airs: said of an airship.

airy 'E:-zī adj.

1. performed or taking place in the air or atmosfere; of, belonging to, or appropriate to the air; aerial; aerian: as, *airy navies.

2. placed high in the air; open or exposed to the air; aerial; lefty; ethereal: as, an *airy mountain.top, *airy

neven

3. exposed to the open air; abounding in free air;

breezy: as, an *airy mode of life.

4. composed or made of air; air-like; bueyant, light, frail, elastic: as, *airy, frail, and fairy craft; neiseless, *airy flight.

airy 'E:-zi n. same meaning as aery.

ala 'ee-le n. a winglike part.

ala spuria, the false or bastard wing of a bird; the alula.

alar 'ee-loz adj. of a wing or wings; winglike; wing-shaped.

alar expanse, see expanse.

alar extent, see extent.

alar tract, the tract or area which constitutes the surface of a bird's wing; the wing tract.

alary 'se-la-zi adj. of alae or wings: as, *alary aerostation.

alate 'ee,let adj. having wings or side appendages resembling wings; winged.

alated 'ee,letid adj. winged; having wings.

alation, e'Ree-Son n. winged condition; the mode in which the wings of an insect are formed or disposed upon the body.

albatross 'ælbə,tges n. [also spelt albatros] a seasbird of the petgel family which inhabits the southern seas and the entire Pacific ocean and is noted for its soaring.

great albatross, the largest of seasfowls, Diomedea exu-

lans; the albatress.

mechanical albatross, an aeroplane flying-machine.

alcohol 'ækkə,hol n. a limpid colorless liquid, ethyl hydrate, used as a fuel in engins.

absolute alcohol, alcohol entirely free from water; anhy-

drous alcohol; pure alcohol.

denatured alcohol, alcohol which has been deprived of certain of its natural characteristics by importing to it a disagreeable odor and nauseating property by adding to it a certain percentage of benzine or other substances, in order to prevent its use as an intexicant while promoting its use in the orts, as a fuel, etc.

aliform 'ælı,fe:zm adj. having the ferm of a wing; wing:

shaped, winglike; alate; pterygord.

alight ə'lart intr. [preterrt alighted, alit] settle or ledge upon the ground or elsewhere, after descending thru the air above; dismount, get down, or land from a balloon or airship; land under control, on a particular spet or object, by floating, flying, or falling lightly, as a bird from the wing; descend, settle (and dismount).

alighting-area ə'laı-tıŋ,e:-zi-ə n. an area or tract of ground to be used by aviators for landing their machines

and alighting.

alighting-gear ə'lan-tın,gı:z n. the gear or apparatus (ın an airscraft) which is used in alighting or coming to earth; the landingsgear.

aliped 'ælr.ped adi, wingsfooted, as a bat.

aloft a'le:ft adv.

1. high up in the air or sky; at a great elevation, relativly, above the earth; on high.

2. on or to a higher part of a balloon or airship.

alpaca, 21'pækə n. a fabric made of the wool of a species of Peruvian llama, used in making balloon-envelops.

altimeter ,æl'tımı-təz n. an instrument for mesuring altı-

tudes, as a quadrant, sextant, or theodolite.

altitude 'ælti,tçud n. height or elevation above the ground, or, in a stricter sense, above the level of the sea; height in

the air; loftiness: as, flying at frigid *altitudes.

altitude-control 'æltr-tçud-kən,trool n. the controllings apparatus by which the altitude of an airship is regulated; the control by the manipulation of which the altitudes rudder is operated.

altitude-prize 'æltı-tçud,psaız n. a prize or reward efferd or won for attaining a specially high altitude in an airship;

a height=prize.

altitude-record 'ælti-tçud,zekəzd n. a record for altitude; a height-record.

altitude-rudder 'ælti-tçud,zadəz n. the rudder by which the altitude of an airship is controlled.

alto 'ælto adi. high, highest: as, *alto clouds.

alto-cumulus, ælto'kçumjo-ləs n. [ploral alto-cumuli] high cumulus, consisting of whitish or grayish balls or masses, with shaded portions, usually grouped in flocks or rows, often so close together that their edges meet; cumulo-cirrus.

alto-nimbus, selto'nimbəs n. [ploral alto:nimbi] high nimbus, a dull-colord cloud formd at the top of a mass of air flowing in under an advancing cumulus or cumulo-nimbus, and afterward giving rise to rain.

alto-stratus ,æłto'stree-təs n. high stratus, a thin veilelike cloud of a gray or blue color exhibiting, when near the sun or moon, a brighter portion which sometimes produces a corona: strato=cirrus.

spotted alto-stratus, mackerel sky.

alula 'ælin-la n, the false or bastard wing of a bird; the ala

aluminium "&lio'mini-om n. same meaning as aluminum. aluminum ə'livu-mi-nəm n, a whitish, ductil, malleable, and

very light metal often used in airship-construction; aluminium.

aluminum bronze, a strong, yellowish metal, an alley of

aluminum and copper.

amidships a'mid.ships adv. in or toward the middle of an airship: midway between stem and stern.

ample 'ampal adj. both long and broad without being

pointed, as the wing of a heron or crane.

anchor 'ankez n. a large prongd hook or similar appliance attacht to a balloon or airship by a rope, used for establishing a connection with the earth preparatory to landing, or for holding or mooring the airship to the ground or to some fixt object; a grapnel.

anchor 'ankez v.

1. tr. secure (a balloon or airship) with an anchor; place at, or bring to, anchor.

2. intr. cast anchor; come to anchor: said either of the

crew or the airship.

anchorage 'ænkə-zida n. the action of anchoring; the state of being anchord; conditions admitting of anchoring; a place for anchoring.

anchorage-post 'ænkəzid3,poost n. a lefty steel post or lattist tower, proposed as a means for anchoring dirigible balloons.

anchor-hook 'ænkəz,hok n. one of the hooks or prongs of

an anchor or grapnel; a grapnel-hook.

anchoring-part 'ænkəzin,pa:zt n. one of the parts or portions of a dirigible balloon to which the anchor-ropes or grapnel-ropes are attacht.

anchoring-ring 'ænkəzin,zin n. a ring en a dirigible balloon to which the anchor rope is attacht.

anchoring-rope 'ankazın, zoop n. same meaning as anchor= robe.

anchoring-rule 'ænkəzin, zoul n. one of the rules or regulations about the anchoring of dirigible or other balloons.

anchor-ring 'ænkəz,zın n. the ring of an anchor, to which the anchor rope is fastend.

anchor-rope 'ænkəz,zoop n.

1. a rope by which the anchor is attacht to the balloon

or airship; an anchoring=rope; a grapnel=rope.

2. a rope or line by which a kite is sometimes anchord or secured to the earth, to prevent it from being carried away by the wind which supports it.

anemobarometer ə,nemə-bə'zemi-təz, ,æni-mə-bə'zemi-təz

n. a windəbarometer; an instrument for obtaining air-pressure and wind-pressure by causing the air to pass thru a

tube or tubes and act upon enclosed barometers.

anemocinemograph ə,nemo-si'nemə,gza:f, ,æni-mo-si'nemə,gza:f n. [also spelt anemocinemograf] an instrument
which records the variations in the velocity of the wind.

anemogen o'nemo-d3in n. an apparatus for producing and experimenting upon airscurrents similar to the natural

winds of the atmosfere.

anemograph o'nemo,gza:f n. [also spelt anemograf] an instrument for recording the direction or force of the wind; a wind-register.

anemographic anemografic adj. [also spelt anemografic]
of or pertaining to anemografy; produced by an anemograf

or wind-register.

anemogram ə'nemə,gzæm n. a grafic record of the pressure or direction of the wind, produced by an anemograf or wind-register.

anemography ,æni'megze-fi n. [also spelt anemografy]
1. description of the winds; a treatis on winds.

2. the art of recording the direction and force of winds.

anemological ə,nemə'lədʒi-kəl, ,ænimə'lədʒi-kəl, adj. of or pertaining to anemology.

anemology ,æni'molo-d31 n. the science of the winds.

anemometer , enr'momitez n. an instrument for mesuring the velocity, pressure, or other properties of the wind; a windsgage; a windsmeter.

Biram's anemometer, a form of wind-gage.

calibration of an anemometer, the conversion of ane mometer-readings into true wind-velocities or wind-pressures by application of whirling-apparatus methods.

Hagemann's anemometer, a suction anemometer by which the velocity is found from the rarefaction produced within

a vertical tube by the wind.

helicoid anemometer, a modified form of Woltman's anemometer in which the plates are bent into helicoidal surfaces like those of a screw propeller; a helicoidal anemometer.

Hooke's anemometer, a pendulum anemometer.

Lander's anemometer, an anemometer or anemograf in which a rubber bellows lifts a float suspended in glycerin.

Lind's anemometer, an anemometer consisting of an inverted glass sifon partly fild with water, mounted on a

wethervane.

pendulum anemometer, an anemometer, first described in 1666, in which a metal pendulum is hung broadside to the wind, the velocity of the wind being mesured by the deflection of the pendulum from the vertical; Hooke's anemometer.

reflecting anemometer, same as Aimé's nephoscope. see under nephoscope.

Robinson's anemometer, an anemometer in which four hollow hemisferic cups revolv on a vertical axis.

anemometric e,neme'metrik, ,æni-me'metrik adj. of or pertaining to anemometry.

anemometrical ə,nemə'metgi-kəi, ,æni-mɔ'metgi-kəi adj.
same meaning as anemometric.

anemometrograph ə,nemə'metrə-gza:f, ,ænı-mə'metrə-gza:f

n. [also spelt anemometrograf] an anemograf.

anemometry ,enr'memi-tgi n. the process or art of mesur-

ing the force and velocity of the wind.

anemonal o'nemo-ni adj. of or pertaining to the wind.

anemophobia ə,nemə'fəo-bi-ə, ,ænəmə'fəo-bi-ə n. [also spelt anemofobia] a morbid fear of high winds.

anemoscope ə'nemə, skop n. an instrument for showing the

direction of the wind; a windsvane.

aneroid 'ana, zoid adj. without wetness; destrute of liquid: applied to a kind of barometer which mesures the pressure of the atmosfere not by its action on a column of mercury as does the ordinary barometer, but by its action on the elastic lid of a box containing a vacuum.

aneroid 'ænə,zoid n. an aneroid barometer.

angle 'ængel n. the space included between meeting lines or planes; also, the degree of inclination of two lines to each other, as of the line of flight to a horizontal base-line.

angle of ascent, the positiv angle of inclination to the horizontal at which an aeroplane flying-machine makes an

ascent into the air.

angle of attack, same meaning as angle of incidence.

angle of bladestravel, the angle or degree of inclination at which a propellersblade travels thru, or impinges upon the air; the angle of travel of a propellersblade.

angle of entry, the angle at which the front edge of an aeroplane or aerocurv enters or goes into the air; the angle formd by the line of motion of an aeroful with a line in the

same vertical plane and tangent to the advancing edge of the aerofoil; the entrant angle; the leading-angle: the opposit of angle of trail.

angle of impact, same meaning as angle of incidence.

angle of incidence, the angle at which an aerofoil, as a whole, strikes or impinges upon the air; the angle which the sustaining-planes of an air-craft, in entering the air, make with the apparent direction of the air-current; the angle formd by the line of motion of an aerofoil with the line (or chord of the curv) of intersection of the aerofoil with the vertical plane passing thru the aerofoil's line of motion; the angle of impact; the angle of attack.

angle of the vertical, see under vertical (noun). angle of the wing, see under wing (noun, sense 1).

angle of trail, the angle at which the rear edge of an advancing aeroplane or aerocurv trails or is drawn along thru the air as it leaves it behind; the angle at which the following edge of an aerofoil leaves or comes out of the air; the angle formd by the line of motion of an aerofoil with a line in the same vertical plane and tangent to the following edge of the aerofoil; the trailing-angle: the opposit of leading-angle and angle of entry.

carpal angle, the bend or flexure of a bird's wing; the

angle of the wing; the bend.

entrant angle, same meaning as angle of entry.

law of the angle, the law relating to the angle of incidence at which a wing or aerofoil is presented to the air.

negative angle of incidence, the angle of incidence of an aerofoil whose line of motion slants downward or below the horizontal; the negative angle of inclination of the line of flight of an aeroplane or aerocury.

negative angle of inclination, the angle of the inclination of an aerofoil, or of its line of flight, when it slants or

slopes downward, or below the horizontal.

optima angle, the best or most advantageous angle of incidence at which a wing, aeroplane, or aerofoil may be presented to the air.

positive angle of inclination, the angle of the inclination of an aerofoil, or of its line of flight, when it slants or

slopes upward, or above the herizental.

antenna ,æn'tenə n. [plural antennae] a receiving device used in wireless telegrafy.

antennae "æn'te,ni n. pl. see antenna.

anthelion ,æn'0ri-li-on n. [ploral anthelia] a luminous and usually colord ring or nimbus seen (single or in concentre series) surrounding the shadow of the observer's had pro-

jected on the under or upper surface of the clouds, or on a feasbank, or on dewscoverd grass, opposit to the sun; an aureola; a glory.

anthropornis ,æn059'po:z-nis n. a flying-machine designed

in the year 1877 by de Louvrié.

anticyclonal .æntr-sar'kzoo-nł. .æntr'sar-kzo-nł n. same

meaning as anticyclonic.

anticyclone .entr'sarkton n. a wether-condition presenting some features which are the opposits of those presented by a cyclone; the rotary outward flow of air from a region of high barometric pressure; also the whole system of high pressure and outward flow.

anticyclonic , anti-sar'klenik adj.

1. opposed to cyclonic: as, an *anticyclonic theory.

2. related to, or having the nature of, an anticyclone. Galton's anticyclonic law, the law of antrcyclones an-

nounced by Galton in 1863; Galton's anticyclonic rule, anticyclonically ,enti-sar'kleni-kə-li adv. in the manner

of an anticyclone; in an anticyclonic manner.

antisolar ,entr'soo-lee, (assumptivly) 'entr, soo-lee adj. situated at a point opposit to the sun, as the center of the rainbow or the gegenschein; located at the antelios.

antisun 'æntr.san n.

1. the point in the sky diametrically opposit the sun.

2. the point in the sky opposit the sun in azimuth and at at the same altitude as the sun above the horizon.

antitrade 'antitreed n, a wind that blows stedily above the tradewind and in the opposit direction to it; an antitrade-

wind; a returnstrade.

antitradewind , anti'tgade, wind, (by contrast) 'anti, tgeedwind n. the wind or air-current above and opposit in drrection to a tradewind; the antitrade; the countertrade; the returnstrade.

anti-twilight , entr'twar, last n. the twilight arc, as first seen in the east opposit the setting sun.

Antwerp 'æn,twbzp n. a kind of carrier-pigeon.

aptera 'æptə-zə n. pl. wingless insects, etc.

apteral 'apto-zol adj. wingless; (in zoology) apterous.

apteran 'æptə-zən adj. wingless.

apteran 'apto-zon n. a wingless insect; one of the aptera. apterium æp'tr:-zi-əm n. [ploral apteria] a fetherless tract on the skin of a bird; an apterion: distinguisht from btervla.

apteroid 'apto, zoid adj. wingless; as of something relativly destitute of wings or sustaining surfaces; similar to that of a wingless thing. compare pterygoid. apteroid aspect, see under aspect.

apteroid 'aptazoid n. a bird destitute of developt wings, or with wings merely rudimentary, as the emu.

are a:zk n. any part of the circumference of a circle or other CHITY.

twilight arc, see under twilight.

arch gizt n. a curve structure; a curv. or curve part, concave downward, as in the front edge of a wing; a droop.

arched a:ztst adj. [also spelt archt]

arched form, a form of wing-section characterized by an arch or droop; the dippingsfrontsedge form of wingsection. argon 'q:z.qon n, a gaseous element, a constituent of the atmosfere.

Ariel 'e:-zi-əł n. one of the seven spirits or angel princes fancied to preside over the waters under the leadership of

Michael: a prince or king of the air: an airsking.

arise o'zaiz intr. go or come up; ascend.

arrow 'æzo n. a slender missil, usually pointed, fetherd, and barbd, and shet from a bow.

baber arrow, a toy handsthrown arrow or dartslike missil made of paper and consising essentially of two elongated and pointed aeroplanes intersecting each other at right angles.

arrowplane 'azo, pleen n. an airship of the aeroplane type invented by L. G. W. Schroeder, resembling a paper arrow

or dort in shape.

arrowy 'æzo-i adj. like that of an arrow; arrow-like: as, the *arrowv swiftness of flight.

ascend intr. qo up; mount; soar; rise; move to a higher level.

ascending-motion o'sendry,moo-son n. the motion by which a balloon ascends or mounts into or thru the air; the motion of ascent; the rising-movement.

ascending-position o'sendry-po,zison n. the position of the rudder of an aeroplane or flyer conducty to ascending

or rising in the air.

ascending-power o'sendin, pou-oz n. power to ascend or rise: lift: as, the *ascendingspower of a balloon.

ascension o'senfon n.

1. the action of ascending, rising, or mounting; a going up into the air: ascent.

2. a balloon=ascent.

ascensional o'senso-ni adj. of or pertaining to ascension or ascent: rising.

ascension-ground o'senson, ground n. a ground or open let whence an ascension or ascent is made in a balloon or airship.

ascensionist o'senfo-nist n. one who makes balloon ascensions: a balloonist.

ascensive o'sensiv adj. [also spelt ascensiv] of or pertaining to ascension; mounting or rising in the air.

ascent o'sent n. a rising or mounting into the air; an ascension, as of a balloon or flyer; a balloon-ascent.
double ascent, an ascent made by two persons at once in

the same machine: a two-man ascent.

nocturnal ascent, see nocturnal.

aspect 'æ.spekt n.

1. look, appearance, as of the sky or of a wethersmap. aspect of a weather=map, the appearance of a (daily) wether=map, its isobars, isotherms, etc., with reference to changes affecting a given point; the direction of the gradient at any given station.

aspect of the sky, the appearance of the sky, especially with reference to change of wether, etc.; the sky-aspect.

aspect.

barometric aspect, the aspect of a daily wether-map with reference to barometric pressure; the direction in which lies the point toward which the principle barometric gradient is rising.

thermal aspect, the aspect of a (daily) wether-map with reference to thermal conditions; the direction in which lies the point toward which the principle thermometric or temperature gradient is moving; the direction from which a change of temperature appears to be advancing toward a given station.

2. the appearance or look presented by an aerofoil according as it is viewd in the direction of flight, or at right angles to the plane of flight; the arrangement or drmensional proportions of an aeroplane, or other aerofoil, in relation to the direction of flight, or in relation to its position about its vertical axis. compare attitude.

apteroid aspect, an aspect or appearance unlike that of wings; wingless aspect; specifically, the aspect of an aeroplane or other aerofoil when it presents the appearance (if viewd in the direction of flight) as of something relatively destitute of wings or sustaining-surfaces; also, the appearance of an aerofoil the greater dimension of which is in the direction of flight (which is the reverse of the arrangement which obtains in the wing plansform of birds),

horizontal aspect, the aspect of the horizontal dimensional proportions, or plan-form, of an aeroplane or other aerofoil; the appearance of an aerofoil as viewd in its herizontal extension or as posed in the plane of its flight. pterygoid aspect, an aspect or appearance like that of wings; winglike or winged aspect; specifically, the aspect of an aeroplane or other aerofoil when it presents the appearance (if viewd in the direction of flight) as of something relatively well provided with wings or sustainings surfaces; also, the appearance of an aerofoil the lesser dimension of which is in the direction of flight (which is the same as the arrangement which obtains in the wing plansform of birds.

vertical aspect, the aspect of the vertical dimensional proportions, or the elevation, of an aeroplane or other aerofeil; the look or appearance of an aerofeil as viewd in the

direction of flight.

aspect-ratio 'æ-spekt,zee-so n. the ratio of the two dimensions (in any given aspect) of a natural or ortificial flyer; the proportion of the spred, span, or transverse dimension of an aerofoil to its depth, or fore-and-aft dimension.

aspiration , espo'zee-Son n. the action of aspiring or breathing; the drawing of breth; specifically, the action of a bird or aerofoil in moving or soaring into the wind, that is, in making hedway or progress against, and relativ to, the wind, apparently by breathing or sucking; a mode of maintaining motion, as if by drawing or polling forward, in flight, in a direction contrary to the wind.

aspirator 'æspə,zetəz n. an apparatus for drawing off air or

other gas, and thus creating a portial vacuum.

aspire o'sparz intr. breath forth; rise, mount up; specifically, move or soar into the wind, that is, make hedway against, and relativ to, the wind, as if by breathing, sucking, or drawing.

astern ə'sts:zn adv.

1. (of place) in or at the stern or hinder part or end of an airship; in the rear; aft.

2. (of motion) toward the stern; to the rear; aft.

astronomy o'strono-mr n. the science of the stars or hevenly bedies.

atmosphere 'ætməs,fi:z n. [also spelt atmosfere]

1. the sfere of air surrounding the earth; the whole body of terrestrial air; the gaseous envelop of the globe; the aerosfere.

2. the air of any particular place or locality, especially as influenced by wether conditions: as, the *atmosfere of a room, the *atmosfere of Chicago.

3. a pressure of 15 pounds to the square inch, taken as the normal pressure exerted by the air at the surface of the earth: as, a pressure of three *atmosferes. atmospheric ,ætməs'fezik adj. [also spelt atmosferic] of or pertaining to the atmosfere or air; aerial.

atmospherical ,ætməs'fezi-kəl adj. [also spelt atmosferical]

same meaning as atmospheric.

atmospherically , atmosfezika-li adv. [also spelt atmosferically] with respect to the atmosfere; as regards air conditions.

atmospherology ,ætməsfr'zola-dar n. [also spelt atmosfe-

rology] the science of the atmosfere.

attitude 'æti,tçud n. a posture or disposition of the parts of an aerofoil relativ to the direction of flight; the position of an aeroplane about a transverse horizontal axis. compare aspect.

ground attitude, the attitude, posture, or angle of incidence of the aerofoils of a flying-machine while standing

on the ground: distinguisht from flyingsattitude.

aureola c'zii-ə-lə n. a luminous emanation, ring, halo, or cloud radiating from, or surrounding, a figure or an object; an anthelion; a glory; an aureole.

aureole 'c:-zi-ol n.

1. a luminous emanation, ring, halo, or cloud radiating from, or surrounding, a figure or an object, such as observed, for example, around an electric orc produced in a vacuum; an aureola.

2. (in meteorology) the ring of white light about twelv degrees wide, with a ruddy border, sometimes seen around

the sun or moon.

3. (in astronomy) the ring of light seen around the sun or moon in total eclipses of the sun.

aurora c'zo:-zə n.

1. the rising light of the morning; the dawn.

2. a luminous radiation, probably of electrical character, originating in the vicinity of the earth's northern (or southern) magnetic pole, visible from time to time by night, in the hevens, especially toward the northern or southern part of the sky; aurora borealis; northern (or southern) lights; merry-dancers; streamers.

aurora australis, the aurora of the southern sky; the

southern lights.

aurora borealis, the northern lights.

auroral c'zo:-zoł adj. ef or pertaining to the aurora, or to auroras: as, *auroral arch, *auroral beams, *auroral corona, *auroral distribution, *auroral flashes, *auroral needles, *auroral period, *auroral periodicity, *auroral waves.

auto-balloon 'c:-to-ba,loun n. a small dirigible balloon for

ordinary purposes; a lighter-than-air flyabout.

auto-ballooning 'c:-to-bə,lou-nin n. the use of auto-balloons; the action or sport of flying about in small dirigibles.

avalanch-wind 'ævə-la:n\, wind n. a wind produced by an avalanch, sometimes so violent as to tear a person's clothes to shreds.

Aves 'se, viz n, pl. the birds; the fetherd vertebrates.

avian 'ee-vi-on adj. of or pertaining to birds.

avian 'ee-vi-on n. a member of the class Aves; a bird.

aviarist 'ge-vi-a-zist n. the keeper of an aviary.

aviary 'ee-vi-ezi, 'ee-vi-ə-zi n. a large cage, house, or enclosure where birds are bred or kept; a bird-house.

aviate 'ee-vi,et intr. fly: as, "Flyer," the *aviating cat.

aviatic , ee-vi'ætik adj. ef or relating to aviation.

aviatics , ee-vi'ætiks n. aviation.

aviating 'ee-vi,etm n. the ort, occupation, or sport of flying; aviation.

aviation ,ee-vi'ee-san, (less properly) ,ævi'ee-san n. the art or act of flying; the science or practis of artificial flight; manflight: often restricted to flight by means of hevierathan-air machines. compare aeronautics.

aviation-course ,ee-vi'ee-Jan,ka:zs n. a course or track
where airships or flyers are tested or flown; an aviation-

track; an aerodrome.

aviation-expert ,ee-vi'ee-Son,ek-spect n. an expert on aviation; one who is skild in the art or theory of artificial flight.

aviation-field ,ee-vi'ee-San,filld n. a field or tract of land where airships are tested or flown; a flying-ground.

aviation-ground ,ee-vi'ee-sən,gzqqqq n. [commonly used in the plural] a ground, field, or tract of land where airships or flyers are tested or flown; an aviation-field.

aviation-meet ,ee-vi'ee-sən,mit n. a meet or meeting for practising aviation or flying; an aviation-meeting; a fly-

ingsmeet; an aero meet.

aviation-park, ee-vi'se-son, po: k n. a pork or field devoted to or used for practising aviation or flying; an aviation field; a flying ground.

aviation-shed , ee-vi'ee-San, Sed n. a shed for housing a fly-

ingsmachine; an aeroplanesshed; a hangar.

aviation-supply ,ee-vi'ee-son-so,plai n. [commonly used in the ploral, aviation-supplies] a supply or commodity used in connection with aviation, as a propeller-blade.

aviation-tournament ,ee-vi'ee-\on,to:z-na-mant n. a tournament for practising aviation or flying; a flyingsmeet.

aviation-track ,ee-vi'ee-San,træk n. a track or course where

airships or flyers are tested or flown; an aviation course; an aerodrome.

aviator 'ee-vi,etəz n.

1. a flying-machine; a flyer.

2. one who flies, especially in hevier-than-air machines; one who practises aviation; a flyer, aeronaut, or airman.

aviatorial ,ee-vi-o'to:-zi-ol, ,ævi-o'to:-zi-ol adj. of or pertaining to aviators or aviation; relating to human flight.

aviatory 'Ee-vi-a,to:-zr adj. of aviation.

aviatress 'ee-vi, etgis n. a female aviator; a woman who drives a flying machine.

aviculture 'ee-vi,kaltsoz n. the rearing of birds; birdsfancy-

ing

avian 'ee-vi-ən, 'ævi-ən n. a bat-like type of aeroplane developt by Clement Ader, a French electrician, which, as a result of its performance of October 9, 1890, is noted for being the first power-driven, man-carrying aeroplane ever to attain flight.

a-wing o'win adv. on the wing; flying.

axillar 'æksi-ləz adj. axillary.

axillar 'æksi-ləz n. [commonly used in the ploral] any one of the fethers growing from the axilla or armspit of a bird; an axillary fether.

axillary 'æksı,lezi adj. of the axilla or ormspit of a bird.

axillary feathers, the fethers growing from the axilla or ormspit of a bird; the innermost fethers lining the wing; the axillars.

azure 'æ3əz, 'ee-3əz n. the blue color of the clear sky; also, the unclouded vault of heven.

azure 'æ3əz, 'ɛe-3əz adj. colord like the clear sky; skysblue; skyscolord, cerulean.

backbone 'bæk,boon n. [also spelt backsbone] the main support or axis; the chief substantial part, as of a dirigible; a rigid red connecting the cells of a cellular kite.

back-draft 'bæk,dra:ft n. [also spelt back draught] the draft at the back, or in the rear of, a flying-machine; the wash.

backflow 'bæk,floo n. the flowing backward of the air when acted upon as by a propeller; slip.

backsail 'bæk,seel n. a sail situated at the back or hinder port of an airship; a sail-like tail.

baffle-plate 'bæfəl,preet n. a metal plate used to baffle or direct the flow of air or other gas; a deflector.

balance 'bælens n. a balanced condition; a state of equilibrium; equipoise.

automatic balance, balance or equilibration of a flying= machine by automatic or self-acting mechanism; automatic equilibrium; automatic stability.

balance 'bælens tr. maintain in a state of equilibrium or equipoise: keep stedy: equilibrate, stabilize, poise,

balancer 'bælan-saz n.

1. one of a pair of slender processes with clubd ends placed near the insertion of the wings in a dipterous insect or a male coccid, supposed to aid in balancing or equilibrating the insect; a halter; a perser.

2. a rope for balancing or maintaining the equilibrium

of a balloon; an equilibrator; a quide-rope.

balancing-head 'bælensin,hed n. a hed or foresport of a

kite, designed to aid in balancing or equilibrating.

balancing-machinery 'bælən-sın-mə, sii-nə-zı n. machinery or apparatus in an airscraft, used for balancing or equilibrating.

balancing-plane 'bælensin,pleen n. a plane or aeroplane used for balancing; an aerofeil employd for maintaining the equilibrium of a flying-machine; a balancing-surface; a stabilizing=surface; an aileren.

balancing-rudder 'bælensin,zadez n, a rudder in a flyings

machine, used for balancing or equilibrating.

balancing-skill 'bælensin,skil n. skill in balancing; dexterity in maintaining equipoise during flight.

balancing-surface 'bælensin, sezfis n. an aerofeil surface used in balancing or equilibrating a flying-machine or airship; a stabilizing surface; a balancing plane.

balancing-tail 'bælensin, teel n. the tail of a kite or flyingmachine designed for balancing or maintaining the equi-

librium of the whole craft in the air; a trailer.

ballast 'bælest n. hevy material, especially sand or gravel, carried in a balloon or airship and used to throw overboard and thus lighten the load, giving the craft a tendency to rise. floating ballast, ballast which is designed to float upon the surface of water, as that sometimes attacht to the guide= rope of a balloon.

ballast 'bælast tr. furnish with ballast; regulate the ballast of. ballast-bag 'bælest,bæg n. a bag for containing ballast: a

ballast-sand 'bælest,sænd n. sand used for ballast in a balloon or airship.

ballast-thrower 'bælest,θ500-ez n. a device for throwing or discharging ballast from a balloon.

ballonet ,bæle'net n. [also spelt ballonette and, less properly, ballonnet, balloonet, balloonettel

1. a relativly small balloon or air-bag placed inside a lorger balloon or aerostat and used for controlling the alti-

tude or for keeping the envelop taut.

2. one of several subsidiary balloons or inflated gassbags forming comportments or structural units in a dirigible balloon, for the purpose of safety in case of accident, or for insuring stability of form.

ballonnet ,bæle'net n. see ballonet.

ballon sonde ,bælen'send n. [also spelt ballon-sonde; plural ballons sondes] same meaning as sounding-balloon.

balloon bə'loun n.

1. (In fireworks) a pasteboard ball stuft with combustibles, fired from a mortar to a considerable height where it bursts and produces various luminous effects; an air-balloon (sense 1).

air balloon, same meaning as air-balloon (sense 1).

2. an airtight bag or hellow vessel fild with hydrogen gas, coal*gas, heated air, or any other gas lighter than common air, and eften provided with a cor and other appurtenances designed to rise and float in the atmosfere, alone or with persons on board.

air balloon, same meaning as air-balloon (sense 2).

auxiliary balloon, a balloon used in an auxiliary or secondary capacity.

balloon photography, fotografy from balloons; the art of taking fotografic pictures while traveling in a balloon.

balloon principle, the principle of the balloon or aerostat; the principle of atmosferic buoyancy; the lightersthansair idea: distinguisht from flying principle.

captiv balloon, see under captiv.

coal-gas balloon, a balloon whose gasbag is inflated with coal-gas.

dirigible balloon, a balloon which can be steerd or guided;

a steerable balloon; a dirigible.

elongated balloon, a balloon which, insted of having a globular or pearsshaped gasbag, is longer than it is wide; a cylindric, cigarshaped, or sausagesshaped balloon or dirigible.

free balloon, a balloon which is free from all connection with, or attachment to, the earth: distinguisht from captiv balloon; also, an unmanned balloon, free from control, used for investigating the upper air.

heated=air balloon, same meaning as hot=air balloon.

hot-air balloon, same meaning as fire-balloon. compare air-balloon (sense 2).

hydrogen balloon, same meaning as hydrogen-balloon.

inflammable air balloon, a balloon whose gasbag is fild with inflammable air, that is, with hydrogen gas; an air balloon (sense 2); a hydrogen balloon.

internal balloon, a subsidiary balloon, inside of the main

gasbag; a ballonet.

locomotive balloon, a balloon which is capable of locomotion or movement from place to place; a dirigible balloon.

luminous balloon, a balloon which is renderd luminous at night by being artificially lighted, designed for signal-ling at night.

manned balloon, see under manned.

non-lifting balloon, see under non-lifting.

paper balloon, a balloon made of paper, such as one of the small hot air balloons used in fireworks.

parachute balloon, a balloon fitted with a parachute

apparatus.

rarified air balloon, a balloon or aerostat in which the lifting power is due to the rarifaction of the air in a hollow receptacle; a form of rigid balloon designed to be sustaind in the atmosfere by means of a partial vacuum.

self-registering balloon, a balloon carrying self-registering meteorologic instruments, sent up in investigations of the atmosfere; a registration-balloon; a recording-balloon; an exploring-balloon; a sounding-balloon.

spherical balloon, a balloon whose gasbag is sferical in

shape; an ordinary globular or pear-shaped balloon.

steering balloon, a balloon which is capable of being steerd; a steerable balloon; a dirigible.

balloon bə'loun v.

1. tr. carry up or transport in, or as in, a balloon.

2. intr. make an ascent in a balloon or dirigible; make a series of balloon trips or exhibitions.

balloon-accident bə'loun, ksi-dnt n. an accident to a balloon; a mishap to an aeronaut while making a balloon-tgip.
balloonacy bə'lou-nə-si n. lunacy about balloons: mania

for ballooning; balloonomania.

balloon-announcement be'loun-e, noons-ment n. an announcement of a balloon-ascent; a notes that a balloon-ascension is about to be made.

balloon-ascension bə'loun-ə,sen∫ən n. an ascension made by a balloon; a balloon ascent.

balloon-ascent bə'loun-ə,sent n. an ascent made by a balloon; a balloon ascension.

balloonatic be'lune-tik n. a lunatic about balloons; one gone crazy over ballooning; one who is balloonsmad.

balloonatic be'lune-tik adj. like that of one who is a lunatic about ballooning: balloonscrazy.

balloonation ,bælo'nge-son n. ballooning, balloonery, aeronautres.

balloon-base belounbees n, a base or basis for the operating of balloons, as a water-ship.

balloon-basket beloun.ba:-skit n. the basket or car of a halloon

balloon-business beloun.bizniz n. the business or occupation of making or operating balloons.

balloon-car bə'loun,ka:z n. the car or basket of a balloon.

balloon-center balloun, sentaz n. [also spelt balloon-centre] a center or rendezvous for balloons or balloonists; a town which servs as a central point or meetingsplace for aeronauts.

balloon-cloth bə'loun,kzo:θ n. the cloth of which the gasbag of a balloon or airship is made; balloon-fabric; envelopstuff

balloon-cloud bə'loun,kraud n. a balloon-shaped cloud; a cumulus or alto-cumulus cloud expanded at the top so as to resemble a rising balloon.

balloon-club bə'loun,krab n, a club or association of balloonists: an aerosclub.

balloon-corps bə'loun,ko:z n. an army-corps or organized bedy of troops whose duty is balloon-work; a balloonsection: a balloon-detachment.

balloon-detachment baloun-dr'tætsmant n. a detachment of an army in charge of ballooning; a balloon-corps; a balloon section.

balloon-dirigible balloun,dizida-bal n. a dirigible balloon.

balloon-dispatch be'loun-dr, spæts n. a dispatch transmitted by balloon; a message sent in a balloon.

balloon-driver be loun, drar-vez n. the driver or pilot of a

balloon; a balloonist; an aeronaut.

balloon-envelop bə'loun, envə-lop n. [also spelt balloon= enveloped the envelop, covering, or material of the gasbag of a balloon.

ballooner ba'lou-naz n. one who makes balloonsascents: a balloonist: an aeronaut.

balloonery bə'lou-nə-zi n. [synonymous cognate balloonry] the grt or practis of ascending in balloons; the management of balloons; aerostation (sense 2); aeronautics.

balloonet ,bæla,net n. see ballonet. balloonette .bæle'net n. see ballonet. balloon-experiment beloun-ik, spezi-ment n. an experiment in hallooning: a balloonstest.

balloon-expert beloun, ek-spert n. an expert on balloons; one skild in making or managing balloons.

balloon-fabric be loun.fæbzik n. a fabric for use in making balloons or gasbags: balloon-material; envelop-stuff.

balloon-factory be loun fækte-zi n. a factory or shop where balloons are made.

balloon-farm ba'loun forzm n. a form or enclosure occupied by balloons.

balloon-flight be'loun, frait n. a flight or ascension of a balloon: a balloon-ascent.

balloon-flying beloun.flai-in n. a flight or ascension of a balloon: a balloon ascent.

balloon-frame balloun.fseem n, the frame or framework of a balloon; the supporting structure or skeleton of a balloon.

balloon-gas beloun, gas n, gas used for inflating or filling balloons; inflating=gas.

balloon-house be'loun,hous n, a house in which a balloon or dirigible is kept for shelter or repairs; a balloon-shed; an airship-house: an aerodrome.

balloon-housing bə'loun,hau-zin n. the process of housing or providing shelter for balloons.

balloonical belou-ni-kel adi, connected with balloons: aeronautre.

balloonicism bə'lou-nı,sızəm n. a word or frase connected with ballooning; a technical term used by aeronauts.

balloonine be'lou-nin n. a rubber varnish for gas-proofing balloon-cleth

ballooning belou-nin n. the art, practis, or sport of ascending in or managing balloons; aeronautics; aerostation.

ballooning-school belou-nin, skoul n. a school where the ort of ballooning is taught; a school of aeronautics.

ballooning-trip belou-nin.trip n, a trip or journey made in a balloon; a balloonstrip; a balloonsjourney; a balloons flight.

balloonism bə'lou,nızəm n. the practis, sport, or fad of ballooning; balloonery; aeronautics.

balloonist belou-nist n. one who ascends in or manages a balloon; one who practises ballooning; an aeronaut.

balloon-journey balloun,d38zni n. a journey or voyage in a balloon; a balloonstrip.

balloon-kite bə'loun,kart n. a cylindrical balloon or gasbag fild with hydrogen and flown with a cord somewhat in the manner of ordinary kites, used for meteorologic, and now also for military purposes. compare kitezballoon.

balloonless be'loun-les adj. destitute of a balloon or floats vessel; having no gasbag: as, *balloonless dirigible air-

balloon-like bə'loun,laik adj. like or resembling a balloon.

balloon-maker bə'loun.mee-kəz n. one who makes or manufactures balloons; a balloon-bilder.

balloon-making bə'loun, mee-kin n. the art or practis of making balloons.

balloon-man bo'loun,mæn n. [ploral balloon:men] a man who

pilots a balloon: a balloonist: an aeronaut.

balloon-material bo'loun-mo,tr:-zi-ol n. a material for use in making balloons or gasbags: balloon-fabric: envelop-

balloon-net bo'loun, net n. the net or meshwork enclosing the gasbag of a balloon, from which the basket or car is ordinarily suspended by ropes; the netting of a balloon.

balloon-observation bə'loun-obzəz, vee-sən n. an observation made from a balloon, as of military operations, astronomic fenomena, etc.

balloonomania baluno'mee-ni-a n. a mania for balloons

or ballooning; balloonism run mad.

balloon-park bə'loun,pa:zk n. a park or enclosure occupied by balloons and their accessories; also, a complete set or equipment of balloons, etc.; an aerostatic park.

balloon-party beloun, posts n. a party or company of vey-

agers in a balloon.

balloon-pilot bə'loun,par-lət n. the pilot of a balloon; a balloonist; an aeronaut.

balloon-pit be'loun.pit n. a landing-pit for the reception of

a balloon.

balloon-race be loun, zees n, a race of balloons; a balloons centest. balloon-rigging be'loun, zigin n. the rigging, or ropes and

other tackle of a balloon. balloonry be'loun-zi n. same meaning as balloonery.

balloon-sailing beloun, see-lin n. the art or occupation of sailing balloons; aeronautics.

balloon-school bə'luun, skuul n. a school where ballooning is taught; a ballooning school; a school of aeronautics.

balloon-section be'loun, sek sen n. a section of an army having charge of balloon-work; a balloon-corps; a balloondetachment.

balloon-shed be'loun, sed n. a shed in which a balloon or dirigible is kept for shelter or repairs; a balloonshouse; an airship=house; an aerodrome.

balloon-shell bo'loun, set n. the shell or outer covering of a

composit balloon, containing and uniting the gasscompartments or subsballoons.

balloon-ship be'loun, ip n. a ship equipt with balloons or ballooning apparatus, as for coast defense.

balloon-shooting beloun, Souttrn n. the practis of shoot-

ing at balloons, as with a rifle.

balloon-sound be'foun, sound tr. sound or probe by means of balloons; investigate by the aid of a sounding-balloon: as, to *balloon-sound a region of the atmosfere.

balloon-tent be'loun, tent n. a tent or portable ledge of can-

vas used for sheltering or housing a balloon.

balloon-trip bə'ioun,trip n. a trip or voyage in a balloon; a balloon-flight; a balloon-journey.

balloon-valve bə'ioun, vælv n. [also spelt balloon valv] a gas valv for use in connection with a balloon.

balloon-varnish bə'loun,vo:z-nıs n. a vornısh prepared for the gassvessels of balloons. see varnish.

balloon-voyage bə'loun,voi-id3 n. a voyage or journey in a balloon; a balloon=trip.

balloon-wheel bə'loun, wiil n. (in fireworks; obsolete) a shell: a bem.

balloon-work bə'loun,we:zk n. work of any kind in connection with balloons or ballooning; also, the practis of ballooning itself.

balloon-wrecking bə'loun,zekin n. the act of wrecking a balloon; rupturing a balloon, as by riflesshets, and causing

a collapse, smashup, wreck, or downfall.

bank bænk n. a pile or mass.

bank of clouds, a cloud=bank.

bank bænk tr. incline or slant an aeroplane flying-machine laterally (with the inner side downward) in turning or going round a curv, so as to take advantage of the resistance of the bank or mass of air upon which the machine is thus forced to act.

banking 'bænkin n.

1. the action of driving an aeroplane flying-machine in a tilted or laterally inclined manner, with the inner side downward, while rounding a curv. see bank (verb).

2. a bank or upright resistant mass, as of air: as, the air formd a natural *banking as the aeroplane swept round.

banner-cloud 'bænəz,kzoud n. bannerslike cloud, streaming herizentally from a mountainstep.

barb bazb n. one of the pointed processes, of the first order, on either side of the rachis of a bird's fether; one of the rami of the vane of a fether.

barber 'ba:z-bəz n. a strong cutting wind loaded with par-

ticles of frozen fog, occurring in the Gulf of Saint Lawrence in Canada.

barbicel 'ba:z-bi-səl n. a little barb or beard; one of the small pointed processes on the barbule of a bird's fether; a fringing process of the third order of a fether.

barbule 'baz, bjul n. a little barb or beard; one of the little pointed processes on the barb of a bird's fether; a fringing process of the second order of a fether.

baric 'bæzik adj. of or pertaining to the weight or pressure

of the air or atmosfere; barometric.

baric law of the wind, the law expressing the relation of wind-direction to the isobars.

baric wind=rose, see under wind=rose.

barogram 'bæzə,gzæm n. the record made by a barograf.

barograph 'bæzə,gza:f n. [also spelt barograf] a barometer which automatically records the variations in atmosferic pressure in continuous correlation with time.

barometer bə'zəmi-təz n. an instrument for mesuring the weight or pressure of the air or atmosfere, and hence used for forecasting wethersconditions, ascertaining height of ascent. etc.

aneroid barometer, see under aneroid.

mercurial barometer, a barometer in which a column of mercury is used.

barometric ,bæzə'metrik adj. of, pertaining to, or indicated by, a barometer.

barometrical ,bæzə'metri-kəl adj. same meaning as barometric.

barometrically ,bæzə'metri-kə-li adv. in a barometric manner; with respect to the barometer.

barometry be zomi-tri n. the art of making barometric

mesurements; the mesuring of atmosferic pressure.

barothermograph ,bæzə'θs:z-mə,gza:f n. [also spelt barothermograf] an apparatus for recording simultaneously the pressure and temperature of the atmosfere, often used on kites and sounding≈balloons; a combination of a barograf and thermograf.

barothermohygrograph bæzə,θεzmə'hει-gzə,gza:f n. [also spelt barothermohygrograf] an apparatus for recording the pressure, temperature, and humidity of the atmosfere, often used on kites and sounding balloons; a combination of a

barothermograf with a hygrometer.

barothermometer ,bæzo-0oz'momi-toz n. an instrument for mesuring the pressure and temperature of the air.

barrel 'bæzəl n. the hard, horny, hollow part of the stem or shaft of a bird's fether; the calamus proper; the quill. basket 'ba:-skit n. a vessel of plated-ogier wickerwork, or other material, suspended or fixt at the lower port of a balloon or airship and occupied by the aeronaut or voyagers.

bat bæt n. a mouse-like nocturnal mammal of the order cheiroptera, having membranous wings and flying with a peculiar quivering motion; a flittermouse; a reremouse.

bate beet intr. [also spelt bait] (in falconry) beat the wings impatiently and flutter away from the perch; flutter.

bat-like 'bæt, lark adj. like a bat or flittermouse; resembling that of a bat.

beak-stay 'brik, stee n. a stay or strengthener forming a part of the beak or nose of an elongated balloon or airship, designed to prevent the beak collapsing or being crusht by the pressure of the air.

beam brim n. the side of an airship.

beam wind, a wind coming from one side; a sideswind.

bear be:z intr. be directed in a certain way; tend.

bearing 'be:-zin n. the direction in which any point lies from the point of reference, especially as mesured in degrees from one of the quarters of the compass: as, take one's *bearings.

bearing-surface 'be:-zin,sezfis n. one of the surfaces of a flying-machine which bears, rests, or acts upon the air; a supporting-surface; a sustaining-surface; a wing-surface; a spred of wing or sail.

bearing-wheel 'be:-zin,wiil n. one of the wheels attacht to the under part of a flying-machine, for bearing upon the ground as in starting.

beat brit n. a stroke; a recurrent stroke, as of a flapping wing or revolving propeller*blade.

beat brit tr. flap with force, as a wing.

bee-line 'bri, lain n. a straight line thru the air; a direct route thru the atmosfere,

bellows 'beloz, 'belos n. an appliance for producing a strong blast of air; a blower.

bellows propeller, a propeller which works on the principle of a pair of bellows, proposed for driving airships.

belly 'belt v.

1. tr. cause to swell out; make bulge.

2. intr. bulge or swell out.

bend bend n. the rounded angle, or curvd or bent upper forepart of a bird's wing; the carpal angle; the flexure: also
cald bend of the wing.

bicycle-carriage 'bai-sikəl,kæzid3 n. a carriage or frame with a set of bicycle-wheels bilt into the base of some flying-machines to aid in storting and alighting.

bight but n. a loop of a line, in distinction from the ends of the line; a turn, bend, or loop in a kite-line.

bight bart tr. fold or double, as a kite-line, so as to form into one or more bights or loops.

biplane 'bai,pleen n. [also spelt bisplane]

1. a flying or gliding machine having two planes or aerofoils, usually about equal in size and one above the the other, but sometimes unequal in size, and staggerd; an aerobiplane.

staggered biblane, a biplane air-craft having staggerd

sustainingsplanes. see stagger.

tandem biplane, an aeroplane flying-machine having two pairs of supporting-planes, or biplanes, placed tandem, or one after the other, as that designed by W. H. Walden.

2. any aerial device consisting of two superposed plane aerofeils, usually about equal in size: as, the elevator con-

sists of a pivoted *biplane.

biplane 'bar,preen adj. having two planes, usually about equal in size, and superposed; two-plane: as, a *biplane

kite: distinguisht from monoplane, etc.

bipolar ,bar'poo-lez adj. having two flexible axes: said of a kite tried by Bazin in 1888, having not only the bow but also the central spine, flexible, so as to secure not only lateral but also longitudinal balance or equipoise.

bird be:zd n. any fetherd vertebrate animal; a member of the class Aves, allied to the reptils but distinguisht by their warm blood, fethers, and adaptation of their fore-lims as

wings, with which most species fly in the air.

aerial bird, see under aerial.

aquatic bird, a wading or a swimming bird, as a duck.

bird of freedom, the American bald eagle.

bird of Jove, the eagle.

bird of Juno, the peaceck.

bird of Minerva, the owl.

bird of night, the owl.

bird of passage, a bird which regulary passes in the spring from a warmer to a colder climate, and back in the fall; a migratory bird; a migrant.

bird of peace, the dove.

bird of prey, a bird which seeks prey, as the hawk, eagle, owl; a bird of the order Raptores or Accidities.

bird of the year, a bird less than a year old.

bird of wonder, the fenix.

bird principle, the principle or method according to which birds fly; the flapping-wing principle; the ornithopter idea.

flying bird, any bird which habitually flies, as distin-

quisht from birds which do not habitually fly.

homing bird, a bird that goes home; a bird, such as the carrier pigeon, which, when releast from restraint, has the faculty or tendency to return, from great distances, to its home or place where it was reared.

mechanical bird, a bird-like flying-machine, or an arti-

ficial bird designed to fly.

sailing bird, a bird which sails, soars, or glides in the air; a bird which practises sailing flight.

bird-catcher 'ba:zd,kætsəz n. one who or that which catches

birds, as a person, a bird, or an insect.

bird-craft 'bazd ksa:ft n. the craft or art of flying as prac-

tist by birds; the art of flight.

bird-fancier 'bB:zd,fænsi-əz n. one who fancies, or takes plesure in, rearing or collecting birds; also, a dealer in pet or captiv birds.

bird-flight 'bB:zd,flait n. the mode of flight characteristic

of birds; birdslike flight.

bird-flock 'ba:zd,flek n. a flock or company of birds.

birdsflock flyer, a flyer or flyingsmachine such as A. G. Bell's tetrahedral-cell flying-apparatus, whose structure makes it resemble a flock of birds in flight.

bird-life 'bs:zd,larf n. the life of birds; the mode of

existence, habits, etc., of the fetherd tribe,

bird-kite 'bB:zd,kart n. a Chinese kite which resembles a bird: a birdslike kite.

bird-land 'ba:zd.lænd n, the land or relm of birds; the airy reaches; airdom.

bird-like 'bs:zd,lark adj, like a bird; resembling that of a

hird birdman 'bs:zd,mæn n. [also spelt bird man; ploral birdmen]

1. a bird-catcher; a fowler; also, an ernithelogist.

2. a man who flies, by artificial means, in a manner comparable to that of a bird; a mansbird; an aviator.

bird's-eye 'bs:zdz,si adj. seen from above, as if by a flying bird: as, a *bird's eve landscape, a *bird's eve view.

bird'szeye view, a mode of perspectiv representation in

which portions of country, towns, etc., appear as they would if viewd from a considerable elevation.

bird-tail 'bs:zd,teel n. a tail like that of a bird.

bird-travel 'bB:zd,trævel n. the travel of birds; the periodic journeying to and fro of migrating birds.

bird-wave 'bB:zd, weev n. a wave or tide of bird immigration; an arrival of birds in considerable numbers, as in the spring or fall.

bird-wing 'bazd.win n, the wing of a bird; a bird's wing. bise briz n. a dry cold north and northeast wind similar to the mistral, in Provence and the Rhone valley.

bird-woman 'ba:zd, woman n. a woman who flies, by artificial means, in a manner comparable to that of a bird; an

aviatress. compare birdman (sense 2)

blade bleed n. one of the floats, vanes, or sails of a propeller or wind-wheel: a slat or narrow sustaining-surface. as of a Phillips flyer.

blade-angle 'bleed, ængel n, the angle or degree of inclination of a propeller blade to the angle of blade travel; the

angle of bladessetting: the bladesinclination.

blade-length bleed length of a propeller blade, blade-section 'bleed, sek son n. the section or cross-section of a propellersblade.

blade-setting bleed.setin n. the setting or mode of set or

pose of a propeller blade.

blade-travel 'bleed, trævel n. the trævel or mode of movement of a propeller-blade, especially when the propeller has its normal translatory motion thru the air.

blast blast n. a forcible stream or jet of air, as from a blower, sometimes proposed as a source of propulsiv power

for airships.

blizzard blizzzd n, a gale or hurricane with intense cold and dry, driving snow, especially common in Dakota and Manatoha

blocking-cord 'blekin, ke:zd n. a kind of cord used in blocking hats, and, in late years, sometimes employed as kitestring or kitesline in meteorologic work.

blood-rain 'bladzeen n, rain which leaves red stains due to fungi containing red exid of iron, which have been raised into the atmosfere by the wind and which the rain brings down.

blower 'bloo-ez n. a machine for blowing or forcing air; an apparatus for producing blasts, as in certain schemes for airship=propulsion; a blowing=machine; an air=blower; as. a *blower for ballonets.

blowing-apparatus bloo-in-æpə,zee-təs n. a blowing-ma-

chine: a bellows-like apparatus; a blower.

blue blou n. the blue sky or atmosfere; the hevens; the agure. bluff blaf adi, having or presenting a broad or expansiv front or surface, as a sfere.

boat boot n. the boat-shaped or boat-like car of certain hal-

loons or airships.

boat-car 'boot,ka:z n. a boat-like car: as, the forward *boatcar of a Zeppelin airship, compare gondola.

boat-shaped 'boot, sept adj. shaped like a boat, as the car of an airship.

body 'body n. the main, central, or principle port of an aeroplane or airship, where the motor, fuel, or other load

is containd; the fuselage or nacelle of a dirigible.

body-cradle 'bodr.ksee-di n. a cradle or framework in a flyingsmachine, upon which the operator's body rests in such a manner that, by swaying from side to side, he may import to the cradle certain lateral movements for controlling the wingstips, compare shouldersvoke and seats back.

body-frame 'bodi, freem n. the frame or framework of the body of an airship or flying-machine; the body-framework. body-framework 'bodi,fseem-wB:zk n. the framework of

the body of an airship or flying-machine, the body-frame. body-part bedr,pazt n. the part or portion of an airship

which constitutes the body; the body, fuselage, or nacelle of

a dirigible.

body-plane body, pleen n. the plane or aeroplane constrtuting the body or main part of a flying-machine, as distinquisht from subordinate planes such as those constituting the wings or vanes.

body-resistance 'bodi-zi, zistns n. the resistance offerd by the air to the body of an aerofoil itself, independently of

its surface; the hed-resistance; the hull-resistance.

bomb bom n. [also spelt bom] an explosiv projectil having the form of a sferical shell; a bomshell; also, a sandbag or other missil drept or cast from an airship in a manner similar to that in which bems are thrown.

bomb-casting bom,ka:-stin n. [also spelt bom=casting] the action of casting bems, as from airships; bemsthrowing.

boom boum n. a long spar, pole, or red, as one of those carrying the tail of an airscraft.

boomerang bou-ma, zæn n. a curvd missil used in war and the chase by the aborigines of Australia. It is thrown by hand and may be made to return to the thrower.

bora 'bo:-zə n. a violant dry wind in the region of the Adriatic Sea which blows down off the plateau of Corinthia

from the northeast or north.

Boreas 'bo:-zi-as n.

1. (in Greek mythology) the god of the north wind.

2. the north wind personified; a cold, northerly wind

boss be:s n. the enlarged part of a shaft on which the wheel or propeller of an airship is keyed.

bottom 'botom n. the surface of the earth considerd as the base of the atmosfere or floor of the ocean of air.

boundary-circulation 'boun-dri-spzkçu,lee-sən n. the circulation of a fluid along or around a boundary.

boundary-surface 'boon-dri, serfis n. the surface forming the boundary between the live stream and the ded-water in the rear of an advancing aerofeil.

bow bao n. [eften used in the plural] the front or forward and of an airship.

bowsprit 'boo, spsit n. a large spar or boom which projects forward from the stem or front of an airship.

bow-stick 'boo.stik n, the elastic stick which forms the bow of a bow kite.

bow-string 'boo, string n. one of the strings, cords, or lines which is attacht to the bow of a bow kite.

box-kite 'boks,kart n. same meaning as box kite, see under

box-kite 'boks,kart adj. of, or consisting of, a box kite. see under kite.

box-plane 'boks, pleen n. an aeroplane flying-machine having planes arranged in bex-like form.

brace bzees n. a prop or support: a diagonal compression= member in the frame of an aerial vehicle.

brace-line 'bzees, lain n. one of the lines or cords of the bridle of a kite: a brace.

bracing-wire 'bzee-sin, waiz n. a wire used for bracing or preventing deformation, as in the structure of an aeroplane flyingsmachine.

brake-rope 'bzeek,zoop n. a rope hanging from a balloon and used as a brake or to retard the motion of the craft thru the air.

breeze bziiz n. a moderately brisk wind; a movement of the air not so strong as a gale: as, a stiff *breeze.

fresh breeze, a breeze (numberd 5 in Beaufort's winds scale) having a velocity of about 8.8 meters per second.

gentle breeze, a breeze (numberd 3 in Beaufort's winds scale) having a velocity of about 4.8 meters per second.

light breeze, a breeze (numberd 2 in Beaufort's wind: scale) having a velocity of about 3.1 meters per second.

moderate breeze, a breeze (numberd 4 in Beaufort's wind-scale) having a velocity of about 6.7 meters per sec-

mountain breeze, same meaning as mountainsbreeze.

stiff breeze, a breeze of considerable strength or velocity: a strong breeze.

strong breeze, a breeze (numberd 6 in Beaufort's winds scale) having a velocity of about 10.7 meters per second. bridle 'bzar-di n. that portion of the gear of a kite by which it is connected with the string or line by which the kite is

controlled from the earth.

elastic bridle, a kite-bridle in which there is an elastic band which acts in such a manner that an increasing strain gradually alters the angle of flight: as, the Blue Hill automatic *elastic bridle.

brontograph 'brenta,gza:f n. [also spelt brontograf]

1. a brontometer.

2. a map or diagram which, by means of isobrents, etc., shows the movement of a thunder-storm.

brontometer ,bzon'tomi-təz n. an instrument for recording the fenomena of thunder-storms; a brontograf.

buckle 'bakəl intr. bend, bow; curl; become wrinkled.

buffer 'bafəz n. any device or apparatus on the outside of a balloon-car for dedening the concussion or taking up or neutralizing the shock of the bumps of the car against the ground or other object; a shock-absorber.

bump bamp intr. come forcibly in contact with something; strike hevrly, as a balloon-cor against the ground

when landing, on a windy day.

buoy 'bou-I n. a float fixt at a certain place to show the position of objects beneath the water, as shoals or rocks, or to indicate ship-channels; also, a lifebuoy.

buoy 'bou-I tr. support or sustain in a fluid, as the air; keep

from sinking or falling; hold up.

buoyancy 'boi-on-si n. the quality of being buoyant; also, the power of supporting a body so that it floats: said of a fluid.

buoyant 'bei-ent adj.

1. having the quality of rising or floating in a fluid; floating; relativly light; that will not sink; also, pertaining to buoyancy: as, *buoyant equipoise.

2. having the power of keeping bodies suspended or

afloat: said of the air or other fluid.

buran 'bo:-zən n. a snowsterm; especially a long-continued snowsterm accompanied by a cold northeast gale and clouds of drifting snow, occurring on the steppes and deserts of centgal Asia.

burga 'bo:z-gə n. [also spelt boorga] a storm of wind and sleet in Alaska, similar to the porga of Siberia and Russia. burning-gas 'beznin,gæs n. illuminating gas: coalsgas.

butterfly batez, flus n. any diurnal lepidepterous insect, especially one of the rhopalecerous lepideptera.

buttock 'batak n. the portion of an aerofeil or streamline bedy between the shoulder and the tail; the fore part of the run of a streamline bedy.

buzzard 'bazəzd n. any hawk of the genus Buteo, etc.

buzzing 'bazin n. a low humming-sound like that of bees, or of the letter z, sometimes heard in the ears when traveling at a considerable elevation above the earth.

caisson 'kee-son n. [synonymous cognate caissoon] a waters tight box or floating dock sometimes attacht to an airship

to keep it afloat in case it falls into the water.

calamus n. 'kæla-məs [ploral calami] the quill or tubular
part of the stem or scape of a fether; the barrel.

callina ,kel'jri-no n. a dry feg, occurring in Spain.
calm ka:m n. entire want of wind; absence of air-currents of any kind.

Calms of Cancer, the region of high barometric pressure and relativ colm located under the tropic of Cancer, etc.; the horse latitudes.

dead calm, an absolute or complete calm.

region of calms, the region or tract in the Atlantic and Pacific oceans on the confines of the tradewinds where calms of long duration prevail; the calm latitudes.

calm-belt 'ka:m,belt n. a belt or zone of relativ calm on the equatorial side of the tradewinds; a belt of calms.

calm-zone 'ka:m,zoon n. a zone or atmosferre region, at a certain altitude, which is calm, or free from wind; a zone of discontinuity. see under zone.

camber 'kæmbəz n. a convexity or orch, as of an aerocurv; the curvature or bend of an aerofoil, mesurd upon a line perpendicular to the chord of the curv and passing thru the

highest point of the surface.

cambric 'keem-bzik n. a kind of fine white linen cloth originally made at Cambray in Flanders; also, an imitation of this fabric, made of hard-spun cotton yarn. It is used in making airscraft.

caoutchouc 'kou,tsuk n. india-rubber or gum elastic, derived from the milky resinous juice of certain trees in South America, Africa and the East Indies, eften used in making balloonsenvelops.

capsize ,kæp'saiz v.

1. tr. upset, overturn.

2. intr. be upset or overturnd.

captain 'kæptin n. the commanding officer of a balloon or airship; the hed aeronaut.

captive 'kæptıv adj. [also spelt captiv] kept ın restgaint; prevented from ascending freely or escaping; connected to

the earth by a rope or cable: as, a *captiv balloon; a *cap-

trv flyingsmachine.

captive balloon, a balloon anchord or attacht to the ground by means of a rope or cable, which may be either permanently fixt, or connected with an anchor which can be raised at plesure: distinguisht from free balloon.

car ka:z n.

1. the port of a balloon or airship in which the aeronauts sit or stand; the mansvessel; the basket, fuselage, or nacelle.

2. an airship; an aerocar.

earburation ,kazbjo'zee-Son n. the process of impregnating with an atomized volatil hydrocarbon, as the air in an internal-combustion engin, under such conditions that the hydrocarbon vaporizes and forms with the air an explosive mixture.

cardinal 'kozdn-l adi, fundamental, chief, principle.

cardinal point, one of the four points of the horizon (or of the hevens), north, south, east, and west; one of the four chief points of the compass.

cardinal wind, one of the four winds blowing from the

one of the four winds of heven.

careen ka'ziin intr. list, heel, or incline to one side.

carpal 'kazpəl adj. of the carpus or wrist-joint of a bird's wing.

carpal angle, see under angle.

carriage 'kæzidʒ n. a wheeld vehicle; a conveyance; a moving support; the chassis of an aeroplane flying-machine.

rolling carriage, an instrument invented by S. P. Langley for studying the pressure on the normal plane and de-

termining the value of the constant relating thereto.

carrier-pigeon 'kæzi-əz,pidzən n. [also spelt carrier pigeon] a pigeon traind to carry or convey a message from a distance to a peint near its home; a homingspigeon.

car-rigging 'ka:z,zigin n. the rigging of the car of an air-

ship.

carrying-kite 'kæzi-in,kuit n. the lower of the two kites, as in Pocock's or Wenham's kitescarriage, designed to furnish the carryingscapacity or tractiv power: distinguisht from the upper or pilot kite; a draftskite.

carrying-power 'kæzi-ın,pou-əz n. the power of an airship

to support weight.

carrying-rope 'kæzi-ɪŋ,zoop n. the rope borne by a ropebearing kite, as to a wreckt ship, by means of which a lifesaving cable is then drawn on board. carrying-surface 'kæzi-in,sezfis n, a surface for carrying or supporting a flying-machine in the air; a supportingsurface.

caster-wheel 'ka:-stəz,wiil n. [also spelt castor-wheel] a chassis-wheel or skid-wheel mounted on a vertical pivot located considerably in front of the bearing-point of the tire of the wheel, so that the wheel turns automatically as the course of the vehicle changes.

Castor 'ka:-stəz n.

Castor and Pollux, Saint Elmo's fire; corposant.

catamaran 'kætəmə,zæn n. a raft-like airship or airscraft having two elongated gas-vessels longitudinally parallel to each other, with the car and propelling-apparatus between them.

catamaran kite, a double kite whose parts are arranged

like those of a catamaran.

catapult 'kætə,palt n. an apparatus in which a falling weight actuates a rope which polls an aeroplane flying-machine along a storting-rail and thus enables it to launch itself into the air; a storting-derrick; a launching-derrick; a pylon.

cat's-nose 'kæts,nooz n.

1. (in England) a strong, cool, dry northwest wind which pushes under and lifts up a warmer southwest wind.

2. (in England) the cloud in front of such a wind.

cat's-tail 'kæts,teel n. cirrus cloud; curl-cloud.

cattail 'kæt.teel n. cat's tail cloud: a currus cloud: a curl cloud.

cauliflower 'kc:-li,figu-az n. a volcanic or other cloud hav-

ing the form of a cauliflower.

cavitation ,kævi'tee-son n. the formation of cavities or holes within an agitated fluid; the action of a fluid, when streaming past a solid body such as a screw propeller, of ceasing to follow the surface of that body and becoming discontinuous with itself.

cell sel n. a bex-like structure consisting of upper, lower, and side planes, as a box kite or in the tails or other aerofoils of some aeroplane flying-machines, used to afford lateral and longitudinal stability.

cellular 'seliv-loz adj. cell-like; consisting of cells or small bexelike compartmens: as, Hargrave's *cellular kites; *cellular tail.

center 'senter n. the middle point; the point or position of

equilibrium of a body.

center of balance, the center or point at which an aerofoil must be supported in order to remain balanced, or in equilibrium, when an air-current is blowing against it; the center of pressure.

center of action, the area of high or low barometric pressure, which appears to be the most activ or conspicuous on a wether-map.

center of aspiration, the region in a cyclonic stormsarea

where air is rising, etc.

center of bearing, the center of the surface with which an aerofoil bears on the air, or presents itself to the resisting force of the air; the center of surface.

center of effort, the center or point at which the whole amount of the propulsiv effort or thrust of one or more propellers may be applied with the same effect as when

distributed: the center of thrust.

center of gravity, the center or point about which all the parts of a rigid body or rigidly connected system of bodies exactly balance each other, and which being supported, the body or system will remain at rest in any position; the center of attraction; the center of mass; the center of inertia; the center of weight.

center of gyration, the center or point at which, if the whole mass of a revolving body were collected, the rotatory

motion would remain the same.

center of mass, the center or point in relation to a body or system of bodies, so situated that any plane which passes thru it divides the body or system into two parts of which the masses or weights are equal; the massecenter; the center of gravity.

center of lift, the center or point at which the whole amount of lift or vertical component of the upward airpressure upon an aerofoil may be applied with the same

effect as when distributed.

center of motion, the center or point in relation to a body, which remains at rest while all the other ports of the body move round it.

center of power, the region in a storm-area or cyclone characterized by the greatest condensation of water vapor.

center of pressure, the center or point at which the whole amount of pressure may be applied with the same effect as when distributed; the point at which an aerofoil must be supported in order to remain in equilibrium when an airscurrent is blowing against it; the center of airspressure.

center of pull, the center or point at which the whole amount of pull may be applied with the same effect as

when distributed.

center of resistance, the center or point at which the

whole amount of resistance to the translatory motion of an aerofoil may be concentrated with the same effect as when distributed; the point at which the center of thrust or of effort must be located, in order that a flying-machine be in equilibrium.

center of thrust, the center or point at which the whole amount of propulsiv thrust or effort of one or more propellers may be applied with the same effect as when distributed; the point at which a flying-machine would have to be supported in order to remain in equilibrium when the propellers were in action; the center of effort.

centric 'sentric adi, having the center of resistance coincident with the line of flight: opposed to acentric: as, a

*centric aerodone.

channel-flying 'tsant, frai-in n. the action of flying across a channel of water, as the English Channel, in a machine.

charliere . sazli'e:z n. [also spelt Charliere, charlière] a hydrogen balloon.

chart tsa:zt n. a map or draft, as of the currents of the atmosfere.

meteorological chart, a chart or map of meteorological

fenomena: a wether map.

thermal chart, a chart or map showing thermal conditions, or the temperature of the air, land, or water, as by isothermal lines.

chassis 'sæsis, 'sa:-si, sæ'sii n. [ploral chassis] the central or essential frame of an aeroplane or other flying-machine, to which the motor, rudders, propellers, seats, wheels, etc., are attacht; the under-structure of an aeroplane.

chassis-wheel 'sass, will n, one of the wheels attacht to the under part of the chassis of a flying-machine, constituting a port of the running-gear or landing-apparatus.

compare skid=wheel.

chemise si'miz n. a covering of unvarnisht silk enveloping a balloon in place of the ordinary net.

chiroptera ,kar'zopta-za n. pl. the wingshanded creatures, or

bats. chord ke:zd n. the straight line joining the ends of the arc

of a circle or other curv.

chute sout n. a slide or shoot; also, a rapid downward dash or rush of an airship: as, a disastrous *chute.

cigar-shaped si'ga:z, seept adj. having the elongated shape or form of a cigar, often somewhat pointed at one or both ends; spindle-shaped, fusiform.

cilium 'sili-am n. [ploral cilia] a hairslike process on the

barbule of a bird's fether: a barbicel.

circle 'sBzkəl intr. ascend or mount in circles, or spirally, as a bird does; turn in a circle or arc of a circle, as an aeroplane does when rounding a curv.

circling 'sazkıın n.

1. the action as of a bird when soaring in circles or in a spiral course, mounting during that part of each lap which is against the wind; gyrating.

2. an instance of this action; a gyration.

circulation ,sezkço'lee-sən n. the action of circulating, as the earth's atmosfere; movement in a circle or circuit.

general circulation of the atmosphere, the widespred circulatory movements of the atmosfere or air due to differences of its thermal condition between the polar and equatorial regions.

planetary circulation, the circulation of atmosferic air around the planet; the rotation of air around the earth; the

planetary winds collectivly.

tropical circulation, the general circulatory movements of the winds around areas of high and low barometric pressure in the tropics.

circumnavigate ,sezkəm'nævı,get tr. navıgate, sail, or fly around: as, to *circumnavıgate a tower, *circumnavıgate Germany; *circumnavıgate the globe.

cirriform 'sızı,fo:zm adj. having the form of cirrus cloud,

shaped like curlscloud; curly.

cirrocumular ,sizo'kçumju-ləz adj. consisting of or resem-

bling cirro-cumulus cloud; cirrocumulous.

cirrocumulated ,sizə'kçumju,letid adj. [also spelt cirrocumulated] of the nature of cirro-cumulus cloud; cirrocumular.

cirrocumulative ,sizo'kçumju,letiv adj. [also spelt cirrocumulativ] of or pertaining to cirro-cumulus cloud.

eirro-cumulo-stratus sızə,kçumjo-lə'strae-təs n. a cloud of indefinit structure from which rain is falling.

cirrocumulous ,sizo'kçumjo-ləs adj. [also spelt cirrocumulous] of the nature of cirrocumulus cloud; cirrocumular.

cirro-cumulus ,sizo'kçumjo-ləs n. [also spelt cirrocumulus; ploral cirroscumuli] a form of composit cloud combining the the shapes of the cirrus and the cumulus and consisting of a connected system of small white roundish and fleecy cloudlets in close proximity to one another, without shadows, but separated by intervals of sky; mackerelsback sky; mackerelsback sky;

cirro-filum ,sizo'fai-lom n. ice-cloud disposed in threds. cirro-nebula ,sizo'nebjo-lo n. [ploral cirro-nebulae] a nebu-

la or haze in the higher cloud-strata; a faintly reticulated

or striated mass of haze or ice cloud high up in the sky; cirrus-haze.

cirrose 'si,zos adj. of the nature of cirrus or curlscloud; filamentous; wispy; cirrous.

cirrostrative ,sizo'stree-tiv adj. [also spelt cirrostrativ] of cirrostratus cloud.

cirrostratous ,sizo'stree-tos adj. having the form or nature of a cirrostratus cloud.

cirro-stratus ,sizo'stree-tes n. [also spelt cirrostratus] a form of cloud combining the shapes of the cirrus and the stratus and eften giving rise to halos around the sun or moon; cirrus haze.

cirrous 'sızəs adj. of the nature of cirrus or curl-cloud; fila-

mentous; wispy; cirrose.

cirro-velum ,sızə'vıi-ləm n. [also spelt cirrovelum] a horizontal velum or thin veil-like sheet of cirro-stratus cloud.

cirrus 'sızəs n. [ploral cirri] a form of cloud presenting the appearance of parallel or divergent filaments or wisps, or resembling a lock of hair or wool, generally at a great elevation and spreding indefinitly; cat's tail, cat's tails; mare's tails; curl cloud.

cirrus haze, see under haze.

false cirrus, a veil or screen of fibrous cloud sometimes surrounding the top of cumulo-nimbus or thunder-cloud; a delicate white cirrus-like cloud streaming away from the summit of a tall cumulus cloud.

magnetic cirrus, cirrus clouds arranged in parallel bands erroneously supposed to be formd by magnetic influence;

a polar band; a Noah's ork.

reticulated cirrus, an interlaced mass or network of

threds or striae in a dense cirrus cloud.

tailed cirrus, small cirroscumulus or altoscumulus clouds with tail-like streaks of snowflakes or fine rain-drops drifting or falling slowly behind them.

undulate cirrus, cirrus cloud disposed in waves or gentle

curvs; undulated cirrus.

cirrus-flecked 'sızəs,frekt adj. [also spelt cirrus=flect] flect
or detted over with cirrus cloud.

cirrus-haze 'sızəs,heez n. a haze among or above alto-cirrus clouds: cirro-nebula.

cirrus-like 'sızəs,laık adj. like cırrus or curl-cloud.

claw kzc: n. a shorp hookt end of a lim of a bird or other animal; any claw-like hook: as, the *claw of a grapnel.

clearance 'kli:-zons n. clear space, room, or distance, as between the rear edges of the main planes of an aeroplane flying-machine and the propeller. climb kzarm intr. fly or soar upward thru the air; mount continuously: ascend, rise.

clino-anemometer ,kzai-no-æni'memi-təz n. an anemometer for mesuring inclined or non-horizontal air-currents.

clinometer ,kzar'nemi-təz n. an instrument for mesuring angles of dip, angles of elevation, or other vertical angles such as of the roll, the heel, or the pitch of a ship at sea.

close-to-the-ground 'kroos-tada, ground adj. in which the

craft keeps close to the ground; low: said of flight.

cloud keard n. a visible mass of vapor or watery particles suspended in the air at a considerable height above the general surface of the ground; also, the substance of this mass; visible watery vapor floating high in air.

altitude of a cloud, the height of a cloud, mesurd in

vertical line, above the land-level or the sea-level.

alto clouds, see alto.

cloud of night, stratus cloud, which often ascends from the ground after sunset, continues at night, but is disperst at sunrise; night-cloud; fall-cloud.

cotton-ball clouds, small cumulus clouds, resembling balls

of cetton.

iridescent cloud, a cloud which shows rainbow colors.

mammiform cloud, a cloud having pendent protuberances on its under side, resembling mammae or tits.

metrolucent cloud, a high cloud which shines after sunset:

a night-shining cloud.

nacreous cloud, a delicate, high, white cloud shining late at night; a nectrlummnous cloud.

night-shining cloud, a high cloud which shines by night

(after sunset); a metgolucent cloud.

noctiluminous cloud, same meaning as nacreous cloud.

phosphorescent cloud, a pure white cloud sometimes seen in Europe at midnight near the horizon, some 10 or 20 miles above seaslevel, possibly self-luminous but perhaps shining by reflecting the light from some distant twilight; an iridescent, opalescent, or luminous night-cloud.

tornado cloud, a form of cloud, distinctiv of a ternado or whirlwind, which reaches down nearly to the surface of the earth or ocean from the main cloud-mass above and marks the central axis of a whirling mass of air; a water-

spout cloud.

turreted cloud, a cloud whose cloudlets rise like turrets or towers: a thunderscloud.

waved cloud, same meaning as ripplescloud.

woolpack clouds, cumulus clouds.

waterspout cloud, same meaning as tornado cloud,

cloud krand v.

1. tr. overspred with a cloud or clouds: overshadow; obscure: darken.

2. intr. become cloudy: become overcast or obscured with

clouds

cloud kaged adj. of a cloud or clouds; characteristic of the clouds: as, *cloud motion; the *cloud principle.

cloudage 'krav-did3 n. a mass of clouds: cloudiness.

cloud-area 'kroud. e:-zi-a n. [also spelt cloud greal an area or tract of cloud.

cloud-ascending 'kraud-a, sendin adj. ascending or mounting to the clouds: towering as high as the clouds.

cloud-assembler 'kroud-a, semblaz n, he who assembles or collects the clouds: epithet of Zeus in Homer.

cloud-bank 'kzoud,bænk n. a bank or wall of cloud.

cloud-barred 'kraud.ba:zd adi. [also spelt cloudsbard] bard. bankt up with, or obscured by clouds.

cloud-belt 'kraud.belt n.

1. a belt, zone, or circular region coverd with clouds; the zone around the earth which has a maximum of cloudiness. equatorial cloudsbelt, the cloudsbelt which girdles the earth in the equatorial region and contains in its midst the equatorial rainsbelt.

2. the belt or ring of clouds itself, girdling the earth or

other planet: a cloud-ring.

cloudberg 'kraud,be:zg n. [also spelt cloudsberg] a large mass or mountain of cloud, resembling a distant iceberg.

cloud-blanket 'kroud.blænkit n. a blanket or covering of clouds.

cloud-born 'kzaud,be:zn adj. bern in the clouds; originating in the clouds.

cloud-borne 'kzaud,bo:zn adj. borne or transported by the

clouds. compare airsborne.

cloud-built 'kraud,bilt adi. [also spelt cloud-bilt] bilt or made of cloud or clouds; also, figurativly, bilt in the clouds: fanciful.

cloudburst 'kraud,be:zst n. a violent downpour of rain in large quantity and over a limited area; a waterspout.

cloud-camera 'kzoud,kæmə-zə n. a camera, consisting of a lens in a dark chamber, used for observing the image of a cloud in determining its altitude, size, motion, etc.: a fotogrammeter.

cloud-canopy 'kraud,kæne-pi n. a canopy or suspended

covering formd of clouds.

cloud-cap 'kzgod,kæp n, a cap or hood of cloud formd round a mountainstep.

cloud-capped 'kraud,kæpt adj. [also spelt cloud=capt] capt with clouds; having a cap or hood of clouds about its summit

cloud-castle 'kzoud.ka:-sal n. a castle in the clouds; an air=

cloud-chart 'kzgod.t\a:zt n. a chart or daily wether-map showing the kinds, quantities, and motions of the clouds over a given area; a cloud-map.

cloud-chaser n. 'kroud.t(se-saz n. an airship which chases

the clouds.

cloud-checking 'kraod,tsekin adj. checking, halting or stepping the course of the clouds.

cloud-cleaver 'kraud,krii-vəz n. one who cleaves or breaks

thru the clouds.

cloud-cliff 'kroud,krif n, a cliff or bank of clouds; a cloudw=11

cloud-cloak 'kroud,krook n. a cloak or covering of clouds. cloud-compacted 'kraud-kam'pæktid adi, compacted or crowded with clouds: clouded.

cloud-compeller 'kraud-kəm,peləz n. one who compels, or dominates over, the clouds; one who collects or drives together the clouds: an epithet of Zeus in Homer. cloud-compelling 'kraud-kam, pelin adj. collecting or driv-

ing together the clouds: applied to Zeus.

cloud-control 'kzgod-kən.trool n. control or mastery of the clouds.

cloud-covered 'kraud, kavezd adi. [also spelt cloudscoverd] coverd by clouds; cloud-wrapt.

cloud-crammed 'kraud,ksæmd adj. [also spelt cloudscramd] cramd or crowded with clouds; cloudspact.

cloud-curtain 'kzgod,keztn n. a curtain formd of cloud; a

screen of cloud. cloud-dispelling 'kraud-dr, spelin adj. dispelling or driving away the clouds; cloud-dispersing.

cloud-disperser 'kraud-di'spersez n. one who disperses

the clouds; a cloud-scatterer.

cloud-dividing 'kraud-dr, var-din adi, dividing or parting the clouds; cloud-separating.

cloud-dodging 'kraud, dedgin n. the action or practis of dedging or evading clouds.

cloud-drift 'kzaud.drift n.

1. irregular, drifting clouds; cloud-rack; a mass of drifting cloud.

2. the drift or drifting motion of clouds.

cloud-eclipsed 'kzaud-I,kzipst adj. [also spelt cloud:eclipst] eclipst by a cloud: cloudsobscured.

clouded 'kzaw-did adj. coverd, surrounded, or obscured by clouds.

cloud-embrace 'kraud-im,brees n. the embrace of the

cloud-enveloped 'kraud-in,velopt adj. [also spelt cloud/envelopt] envelopt or wrapt in cloud; cloud/wrapt; cloud/ coverd.

cloud-field 'kzood, frild n. an expanse of clouds.

cloud-film 'kraud, film n. a filmy mass of cloud.

cloud-firing 'kroud, far-zin n. the firing of cannon in attempts at rain-making or warding off hail-storms, etc.

cloud-fitting 'kraud, fiting adj. fitting the clouds.

cloud-flake 'kroud, freek n. a flake or fleck of cloud; a bit of cloud-rack.

cloud-flecked 'kroud, frekt adj. [also spelt cloud-flect] showing flecks or small patches of cloud.

cloud-floe 'kraud, froo n. a cloud-mass resembling or likend to an ice-floe.

cloud-fold 'kraud, foold n. a fold of cloud.

cloud-form 'kraud, fo:zm n. a form of cloud; cloud-shape. cloud-formation 'kraud-foz, mee-San n. the formation or

genesis of cloud.

cloudful 'krond-fal adi, full of clouds: cloudy: clouded:

dark.

cloud-gate 'krood, gret n. a gate or pass between hills or premontories thru which clouds are moved by the day and night winds.

cloud-girt 'kraud, gs:zt adj. girt or wrapt with cloud; clouds

coverd.

cloud-gloom 'kraud, gloum n. gloom or gloominess due to clouds.

cloud-hung 'kzqud,han adj. hung or suspended in or on the the clouds: as, *cloud-hung navies.

cloudily 'kzau-di-li adv. in a cloudy manner; with clouds; darkly.

cloud-image 'kroud, imrd3 n. the image of a cloud, as in a nefoscope.

cloudiness 'krau-di-nis n. the state of being cloudy or clouded.

scale of cloudiness, the scale or gradation series by which the proportion of cloudiness to clear spaces, for a given area of the earth's surface, is exprest; a cloud-scale.

clouding 'kao-din n. the appearance of cloudiness; clouded or cloudy aspect or condition.

cloud-island 'kroud, and and an ass of cloud which resembles an island; an isolated cloud-mass. cloud-kissing 'kraud,kisin adj. touching the clouds as if kissing or caressing them; lefty.

cloud-laden 'kagud lee-dan adi. laden or loaded down with

clouds

cloudland 'kraud, land n. the land or region of the clouds; a relm for above the general surface of the earth; also, a 'landscape' of clouds; a cloudscape.

cloud-lead 'kraud, led adj. [also spelt cloud-led] led, at-

tracted along, or preceded, by clouds.

cloudless 'krau-dles adi, without a cloud; unclouded; clear, bright.

cloudlessly 'krau-diss-is adv. in a cloudless manner; without

clouds.

cloudlessness 'krow-diss-nis n. the state or quality of being cloudless: clearness.

cloudlet 'kzav-diet n. a little cloud.

cloud-level 'kraud, level n. the level of the clouds; the elevation at which clouds occur.

cloud-light 'kraud, lark n. clouded light, drm light.
cloud-like 'kraud, lark adj. [also spelt cloudlike] like a cloud; resembling a cloud.

cloud-like 'kraud, lark adv. like a cloud; in the manner of

a cloud.

cloud-map 'kroud,mæp n. a map or chart showing the distribution of clouds over a given area of the earth's surface; a cloudschart.

cloud-mass 'kzoud,ma:s n. a mass of clouds: a cloud-aggre-

cloud-monster 'kroud, monster n. a monster-like cloud=

cloud-motion 'kraud,moo-son n. the motion of a cloud; cloud-movement. compare cloud motion, under cloud.

cloud-nymph 'krood,nimf n. [also spelt cloud-nymf] a nymf of the clouds.

cloud-particle 'kraud, parti-kal n. one of the minute partrcles of water of which cloud is made up.

cloud-peak 'kraud, prik n. a cloud-top which resembles a mountain-peak; the pointed top of a cloud.

cloud-piercing 'kraod,pi:z-sin adj. piercing or extending thru the clouds; overtopping the clouds.

cloud-projector 'kroud-pso,dzektez n. a fotografic apparatus by which the dimensions, altitudes, and distances of clouds are determind.

cloud-rack 'kroud,zæk n. [also spelt cloud-wrack] an assemblage of irregular or broken clouds drifting across the sky; floating cloudy vapor; cloud-drift.

- cloud-region 'kraod,zii-dzən n. the region or place where clouds occur.
- eloud-rift 'kraud, zift n. a rift or opening in the clouds, or in a cloud; a cloud-gap.
- cloud-ring 'kraud,zin n. a ring of clouds; specifically, one of the cloudy zones, belts, or regions north or south of the equator of the earth.
- cloud-rocked 'kzaod,zekt adj. [also spelt cloud-rockt] reckt by the clouds.
- cloud-scale 'kroud, skeel n. same meaning as scale of cloudiness. see under cloudiness.
- cloud-scaling 'kroud, skee-lin adj. scaling the clouds; towering to the clouds; cloud-ascending.
- cloudscape 'kroud, skeep n. a scene composed of clouds; expanse of cloud open to view; a 'landscape' of clouds; a cloudland.
- cloud-shadow 'kroud, Sædo n. the shadow of clouds, especially as seen in the sky, when the air is hazy, in the form of dark lines pointing toward the sun ('the sun drawing water'), or, just before sunrise and after sunset, giving rise to radiant beams diverging from the sun.

cloud-shape 'kraud, seep n. the shape of a cloud; a clouds

form.

- cloud-shutter 'kraud, staz n. a fotografic shutter used in securing images of clouds.
- cloud-stratum 'kzood,stree-təm n. [ploral cloud-strata] a stratum of cloud; a cloud-layer.
- cloud-study 'kroud, stadi n. the study of the clouds; that branch of meteorology which is concernd with the fenomena of clouds; nefelogy.
- cloud-surface 'kzqud,sazfis n. the surface or superficies of a cloud.
- cloud-surmounting 'kraud-səz,maun-tin adj. surmounting or overtopping the clouds; rising above the clouds; cloudpiercing.
- cloud-surpassing 'kzaod-səz,pa:-sin adj. surpassing or outstripping the clouds.
- cloud-tempest 'kzaud,tempist n, a tempestuous or stermy gathering of clouds; a cloud≤sterm.
- cloud-theodolite 'kz.aud-θi,ødə-lait n. a theodolite used in observing clouds.
- cloud-top 'kzaud,top n. the top of a cloud; the summit of a cloud=mass.
- cloud-topped 'kroud,topt adj. [also spelt cloud=topt] having the top coverd with clouds; cloud=capt.

cloud-touching 'kraud,tat(in adj. touching or reaching up to the clouds.

cloud-tree 'kraud trii n, a cloud which resembles a tree in

form; a tree-shaped cloud.

cloud-triangulation 'kzaud-trai-ængjulee-sən n. the mesprement of the sizes and altitudes of clouds by triangulation.

cloud-type 'kraud taip n, a type or typical form or kind of cloud

cloud-wall 'kzgod.wc: ! n. a wall or bank of cloud.

cloudward 'krood-weed adv. toward the clouds; cloudwards.

cloudwards 'kraud-wordz adv. towards the clouds.

cloud-wave 'krood, weev n. a wave-like mass of cloud; a cloudsbillow.

cloud-way 'kzgod, wee n. the way or road thru or upon the clouds: the sky road.

cloud-work 'kraud, we:zk n. work or research in observation of the clouds. cloud-world 'kraud, we:zid n. the world, region, or relm of

the clouds: cloudland. cloud-woven 'kzaod, woo-von adj. woven out of cloud or

clouds; like a fabric or network of clouds.

cloud-wrack 'klaud,zæk n. see cloudsrack. cloud-wrapt 'kroud,zæpt adj. wrapt or envelopt in cloud; cloud=coverd.

cloudy 'kzgo-di adj.

1. of cloud: of the nature of cloud: as, *cloudy vapor, a *cloudy particle, *cloudy condensation.

2. of or pertaining to the clouds.

3. characterized by the presence of clouds; abounding in

or full of clouds; also, not transparent, not clear.

cloudy day, a day in which clouds prevail; specifically. a day in which the average cloudiness between sunrise and sunset equals 8 on a cloud-scale of 10.

cloudy-topped 'krav-dr,tept adj. [also spelt cloudy=topt]

having a cloudy top or summit; cloudstopt.

coal-gas 'kool, gas n. a mixture of gases produced by the destructiv distillation of coal, consisting mainly of corbureted hydrogen, and, when somewhat purified, constituting the common gas used for lighting and heating, and for inflating balloons; illuminating qas; burning qas; inflating

co-altitude ,ko'æltr,tçud n. the comparment of the altitude of an object in the sky or hevens; the zenith-distance.

coast koost n. the edge or margin of the land next the sea; the seashore; the seacoast: the seaside.

coast koost intr. descend, glide, or slide down thru the air, as if on an inclined plane; volplane downward.

coast-defense 'koost-difens n. a defense or fertification on the coast, designed to prevent foren mensofswar from

entering harbors, destroying cities, etc.

coast-wind 'koost, wind n. a wind which blows along or over a coast, or is due to the presence of a coast; any wind which is characteristic of, or which persists in, the coastal region of a continent; a coastal wind.

coating-material 'koo-tin-ma,ti:-zi-al n. a vornish or other material for coating or gas-proofing balloonsenvelops.

co-aviator ,ko'ee-vi,etəz n. [also spelt coaviator] an aviator

who acts jointly with another or others.

coefficient ,ko-r'front n. a numerical quantity, constant for a given substance or structure, used to mesure some one of its properties.

coefficient of efficiency, the coefficient of carryings or sustainingspower possest by an aeroplane or other aerofoil

in flight under given conditions.

coefficient of slip, the coefficient or numerical constant

used as a mesure of propeller-slip, see slip.

coleopter ,keli'opter n. any one of the celeoptera; a sheath-wingd insect; a celeopteron; a beetle.

coleoptera ,keli'epte-ze n. pl. [singular coleopteron] the

sheath-wingd insects; the beetles.

coleopterous ,keli'eptə-zəs adj. of the celeoptera or beetles; having elytra.

collapse kə'læps v.

1. intr. fall together or into a flattend form or irregular mass, as an inflated balloon by escape of gas; cave in; fall in; go to pieces; break down or go to smash.

2. tr. cause to fall together or flatten out, as a balloon, by

deflation.

collapsible kə'læpsə-bəl adj [also spelt collapsable] capable of collapsing or being collapst or folded; also, that can be knockt down and packt in small space, as for shipment: as, a *collapsible flyingsmachine; a *collapsible propeller.

collision ko'lizon n. the action of colliding or forcibly striking or dashing together; a violent encounter of a moving

body with another.

coma 'kɔo-mə n. a state of hevy, deep, prolonged sleep with slow, stertorous, irregular breathing, often experienced by persons in balloons at great altitudes; stupor; lethargy.

comatose 'koo-mo,tos adj. affected with coma; in a state of coma; also, of, pertaining to, or of the nature of coma.

comet 'kemit n. a celestial bedy moving about the sun in

an elongated elliptic or parabelic orbit, resembling a bright stor surrounded by a misty light and having a train of light, or tail, sometimes of enormous length, and directed away from the sun.

compass 'kampos n. an instrument consisting of a magnitized needle turning freely, horizontally, on a pivot, used for determining the magnetic meridian or one's direction or position with respect thereto; a mariner's compass; a

seaman's compass.

compensating-rope 'kompon-see-tin,zoop n. one of the ropes inside the gasbag of a dirigible balloon, such as the Purseval, which serv as compensators between the ballonets and the gas-valv.

compensator 'kompon, setaz n. a relativly small balloon or gasbag placed below the main gasbag to compensate or pre-

vent loss of gas during the voyage.

compression kem'psesen n. the action of compressing; con-

densation by pressure.

compression side, the side or surface of a wing, aeroplane, propeller-blade, or other aerofoil, which effects the compression of, or acts against, the air: the opposit of rarefaction side.

concave ,kon'keev, (assumptivly) 'kon,kev adj. having the outline or surface curvd like the interior of a circle or sfere: the reverse of convex; hollow; presenting a hollow

surface to view; incurvated.

concave 'kon,kev n. the orch or vault of haven; the havens; as, the blue *concave.

concaved 'ken,kevd adj. made or fashiond in a concave form; concave.

concavo-concave kon, kee-vo-kon'keev, (assumptivly) kon-,kee-vo'kon-kev adj. concave on both sides.

concavo-convex kon, kee-vo-kon'veks, (assumptivly) kon, kee-vo'kon-veks adj. concave on one side and convex on

the other, and thinnest in the center.

concentrating-hoop 'konson-tretin,houp n. the hoop or ring of a balloon, upon which the guy-ropes or cordage are concentrated or brought together, and to which they are attacht; the concentrating-ring.

concentrating-ring 'konson-tretin,zin n. the ring of a balloon upon which the guy-ropes are concentrated and to

which they are attacht; the concentratingshoop.

condenser kan'denser n. [also spelt condensor] any device or apparatus for condensing or compressing air or other gases or vapors, or for reducing gases to a liquid or solid form; a pneumatic force-pump; a gas-condenser; a cham-

ber in a steam or other engin in which the steam or other gas is condenst to liquid form, to be re-used.

coniscope 'kong, skop n. [also spelt koniscope] an instrument for showing the amount of dust in the air or atmosfere.

compare dustscounter.

connect kə'nekt tr. jein, fasten, or link together, as hypothetically, the particles of air or other fluid in a region of space.

doubly connected, connected by two, and only two, irreconcilable paths: said of a region of space occupied by

air or other fluid and containing an obstacle.

multiply connected, connected by two or more paths: said of a region of space occupied by air or other fluid and con-

taining one or more obstacles.

simply connected, connected in such a manner that all paths joining any two points are reconcilable, or such that all circuits drawn within it are reducible: said of a region of space occupied by air or other fluid and containing no ehstacles.

triply connected, connected by three, and only three, irreconcilable paths; said of a region of space occupied by air or other fluid and containing one or more obstacles.

connecting-rope kə'nektin,zoop n. a rope which connects

a balloon with the ground.

connectivity kenek'tivi-ti n. the order of connection of a

region of space.

contour 'ken, to:z n. an outline: as, the *contour of a coast; the *contour of a bird; the *contour of a wing; the *contour of a propeller-blade; specifically, the vertical outline of a portion of the earth's surface such as a rolling country or mountainous region; the topografic lay-out of a tract of land; also, a contour=line.

contour-feather 'ken-to:z,fedəz n. [also spelt contours fether] one of the fethers which determin the detail of the

contour or outline of a bird; a surface fether.

contour-line 'ken-tu:z.lain n. a line representing the herrzontal contour of the earth's surface at a given elevation; a line representing the intersection of the ground-surface with a horizontal plane at a certain height above sea-level: one of a series of lines on a topografic map showing the elevations and depressions of the surface; a line on a map all points of which have equal elevations from the datum= plane.

contour-map 'kon-tu:z,map n. a map or chart showing the contours of a section of the earth's surface; a topografic

map with contourslines.

control kən'tgool n.

1. a device for controlling, managing, or governing an

airship or flyer in any respect.

front control, a control located in the front or fore part of an airscraft; a box-like front controllingsdevice or forward elevator, as at the end of the front outrigger of a biplane.

lateral control, a control for regulating lateral or side effects, as air currents; a control for securing sidewise or

transverse equilibrium or balance; a side control.

2. the act or power of direction or guidance, as of an air-ship; regulation, as of equilibrium: as, a system of three-rudder control.

compound control, control or regulation which is made up of, or involvs, several elements or processes; a system of aeroplane control in which, by two-directional movement of a single lever or wheel, the aviator operates two regulatings devices such as a vertical and a horizontal rudder.

three-rudder control, control of an aeroplane flying-ma-

chine by means of three rudders.

3. a locality, as a town, which is used as a regulatings center or point of reference or basis of operations, as along

the route of an aeroplane race.

control-frame kən'ttəol,fssem n. a frame, such as a bodycradle or shoulder-yoke, by which the control of an aircraft is effected; a frame by means of which the movements of the operator's body are utilized in controlling or balancing a flying-machine.

control-lever kən'tgool,hi-vəz n. a handslever for operating

a front or other control, as in a biplane.

controlling-lever kən'tgəo-lin,lii-vəz n. a lever used in contgolling or regulating an airship; one of the levers in an aeroplane by the manipulation of which the operator works the contgols.

controlling-means kan'tgoo-lin, minz n. a means or medium by which the control of an airship is maintaind; a

control=arrangement.

control-wire kən'tgoo, waiz n. a wire by means of which

a control is operated: as, a *control-wire shield.

convection ken'veksen n. the action of conveying or carrying; specifically, the transportation of energy, as heat, by molar motion of bodies pervaded therewith, as in the ascension of heated air or water.

compound atmospheric convection, the total transfer of heat from one part of the atmosfere to another by currents or by condensation of water vapor into cloud.

convectional kən'veksə-ni adj. of or due to convection.

convectional circulation, a general circulation of the atmosfere due to its thermal differences between the polar and equatorial regions of the globe.

convectional current, a convectional movement of the air due to thermal differences in the atmosfere at different

altitudes; a convection-current.

convection-current kən'vek\sən,kbzənt n. a convectional current. see under convectional.

convective kan'vektiv adj. [also spelt convectiv] of the na-

ture of or relating to, convection.

convective resistance, resistance in a fluid, as air, due to changes in the motion of the fluid and to the formation of surfaces of discontinuity; convectiv friction.

convexed 'ken, vekst adj. [also spelt convext] made or

fashiond in a convex form.

cooler 'kou-loz n. the apparatus used for cooling or lowering the temperature of the circulating water of an internal combustion engin.

cooling 'kou-lin n. the process by which the circulating water of an internal-combustion engin is coold: as, water

*cooling, air *cooling.

cordage 'ke:z-did3 n. cords or ropes collectivly, as in the

rigging of a balloon.

corner-stay 'ko:z-nəz,stee n. a stay which is located in or servs to stiffen one of the corners or angles of an aerofoil, as in a monoplane flyingsmachine.

corona kə'zoo-nə n. [plural coronas, coronae]

1. a series of small colord rings or circles of blue, white, golden and red, 3 to 10 degrees in diameter seen around the moon and sometimes the sun, due to the diffraction of the light in passing between the particles of cloud or haze covering the moon or sun; also, a similar appearance opposit the sun; an anthelion; and, more widely, a similar fenomenon in optical instruments, etc.

2. (in astronomy) the halo of radiating white light seen round the sun or disk of the moon in a total eclipse of the

sun.

diffraction corona, a corona due to diffraction of light, as distinguisht from a similar fenomenon which may be due to other optical processes.

corposant 'ke:z-pe-zent n. a ball of electric light sometimes seen about the masts, yard-arms, or other parts of a ship, during a storm; Saint Elmo's fire; Castor and Pollux. costal 'ke:-stel adj.

1, of the costae or ribs of a bird: as, *costal processes.

2. of or near the costa or anterior edge or margin of an insect's wing: as, the *costal vein, *costal cells.

costal angle, the angle of the costa; the tip of an insect's

wing.

costal area, the area, bordering the costa of an insect's wing or teamen, and extending to the subcestal vein.

countercurrent 'koon-toz,kezont n. a current of air flowing or blowing counter to, or against, another current; a countersdraft.

counterdraft 'koon-toz,dra:ft n. a draft or current of air which runs counter to another; an opposit or opposed atmosferic current: a counterscurrent.

counter-glow 'kaun-təz,qloo n.

1. the glow or light in the eastern sky after sunset, due to atmosferic dust, and limited below by the twilightsarch.

2. same meaning as gegenschein.

countershaft 'kgon-toz, s:ft n. an intermediate shaft driven from a main shaft for giving motion to a porticular machine.

countertrade 'koon-toz,treed n. a wind which is above the tradewind, and blows counter (or in the opposit direction) to it, or away from the equator; an antitrade; a returnstrade.

counterwake 'kgon-toz, week n. a wake or current which opposes or runs counter to one alredy existing; a countercurrent surrounding the ded-water of wake current of a streamline body and flowing in the opposit direction from that of the wake; a counterwake current.

counterwind knoun-toz, wind n. a wind blowing counter to,

or in a direction opposit to, one alredy existing.

course ko:zs n.

1. the action of running or moving enward; forward

movement, as of an airship; a run.

2. the path, line, or direction of a run; the path of a body moving thru the air; the direction of the flight of an aerofoil; the flight=path.

3. a race-course for flying-machines; an aviation-course.

course-finder 'ko:zs,fain-dez n. a device for finding or determining the course or flight-path of an airship.

covering 'kava-zin n. the fabric, paper, or other material, which covers or is spred over the framework of a kite and forms the main sustaining surface.

covert 'kavezt n. one of the fethers covering the bases and adjacent parts of the larger wingsfethers and tailsfethers of a bird; a tectxix; especially, a covert-fether of the wing; a wing=covert.

antebrachial covert, one of the covertsfethers or tectrices

located on a bird's antebrachium or foregrm; a cubital covert; a secondary covert.

cubital covert, one of the covert-fethers or tectrices located on the cubit, foreurm, or antebrachium of a bird; an

antebrachial covert; a secondary covert.

greater covert, one of a set or subdivision of the secondary upper wing-coverts constituting a single row which projects furthest upon the secondary remiges or flight-fethers; one of the major tectrices of the wing; a greater upper secondary covert; a greater secondary covert.

inferior covert, a lower covert; an under covert.

least covert, a lesser covert.

lesser covert, one of a set or subdivision of the secondary upper wingscoverts, including all those clast as either greater coverts or median coverts; one of the minor tectrices of the wing; a lesser secondary covert.

lower covert, one of the covert-fethers or tectrices on the lower or under side of a bird's wing; one of the inferior tectrices of the wing; an under covert; an inferior covert.

manual covert, one of the covert-fethers or tectrices located on a bird's manus or hand; a primary covert.

median covert, one of a set or subdivision of the secondary upper wingscoverts constituting a single row located midway between the greater coverts and the lesser coverts; one of the median tectrices of the wing; a median secondary covert; a middle secondary covert; a middle covert. middle covert, a middle secondary covert; a median

covert.

primary covert, one of the wingscoverts which overlie the bases of the primary remiges or flight-fethers; a manual covert.

secondary covert, one of the wing-coverts which overlie the bases of the secondary remiges or flight-fethers; an antebrachial or cubital covert.

superior covert, an upper covert.

under covert, one of the covert-fethers or tectrices located on the under or lower side of a bird's wing; one of the inferior tectrices of the wing; a lower covert; an inferior covert.

upper covert, one of the covert-fethers or tectrices located on the upper side of a bird's wing; one of the superior tectrices of the wing; a superior covert.

upper primary covert, one of the upper or superior coverts which overlie the bases of the primary remiges or flight= fethers of a bird's wing; one of the set of rather long and and stiffish covert-fethers or tectrices located on the upper side of a bird's wing and covering the bases of the primaries; one of the (superior) coverts of the primaries.

eraft ksa:ft n. [ploral croft] any sailing or floating vessel or outfit, as an airship; also, such objects, collectivly.

crank-shaft 'ksænk,su:ft n. [also spelt crankshaft] a shaft

turnd or driven by a crank.

crepuscular ksr'paskçu-ləz adj. of or pertaining to twilight; resembling twilight, especially the morning twilight, as preceding the full light of day.

crepuscular rays, the divergent rays sometimes seen after sunset and before sunrise dividing the sky into segments;

in Japan, cald the ropes of Moui.

crest-height 'ksest, hart n. the height of the crest of a wave of water, as at sea.

crew ksou n. the company of airmen who man an airship;

the air sailors belonging to an aerial vessel.

crissal 'ksisəl adj. of the crissum or anal region of a bird, under the tail; also, characterized by the color of the crissal fethers: as, a *crissal thrush.

eropper 'ksoper n. a sudden descent or fall with the crop, craw, or chest foremost, as of a bird; a fall on the crop.

compare header.

cross kso:s n. a structure consisting essentially of two inter-

secting pieces, an upright and a transverse bar.

luminous cross, a cross of light formd by the intersection, at the sun when near the horizon, of a part of a parhelic circle with vertical columns of light extending above and below the sun due to the reflection of sunlight from the upper and lower facets of ice-crystals in the air.

cross-brace 'kse:s,bzees n. a transverse brace or stick, as in

a cellular kite.

eross-channel 'kso:s,tsanl adj. able to fly across the English Channel; capable of channel flying.

cross-city 'kso:s,siti adj. extending across or over a city:

said of flight.

extending across or over the open country, and not determind merely by roads or other fixt paths: said of flight; also, related to flight of this sert: as, a *cross*country prize.

cross-country 'kso:s,kantri adv. across or over the open

country: as, to fly *cross=country.

cross-current kse:s,kszent n. a current of air or wind flowing or blowing across or at an angle with another current; a crosswise current.

cross-sprit 'kso:s,spsit n. a transverse spsit, spar, or pole.

cross-stick 'kso:s, stik n. the stick of a kite-frame which extends crosswise or across the main stick; the horizontal stick of a kite-frame.

erosstree 'kse:s.trii n. a transverse horizontal timber or

supportingered, as in a Porseval airship.

cross-truss 'kse:s,tras tr. furnish with a diagonal truss: as, to *cross-truss a skid to the fuselage.

cross-wind 'kso:s, wind n. [also spelt crosswind] a wind

blowing crosswise or across, as in relation to the course of an airship: a transverse wind. cross-wire 'kso:s,waiz n. [also spelt crosswire] a wire ex-

tending crosswise, as in the framework of an aeroplane;

a transverse wire.

crow ksoo n. any bird of the genus Corvus, etc; one of the Corvinae.

cruise ksouz n. a flight of considerable extent, to and fro, not directed toward any particular landing-place, but for purposes of experiment, observation, or the like,

eruising-radius 'ksou-zin, zee-di-əs n. the radius of the circle or area over which the cruising operations of an air-

ship extend; the action-radius; an aeroradius.

cumular 'kçumju-ləz adj. having the form of a heap; heapt, piled up; cumulous.

cumular cloud, same meaning as cumulus cloud.

cumulescent kçumjo'lesent adj. forming into cumulus cloud; becoming cumular; piling up; growing larger.

cumuliform 'kcumioli.fo:zm adi, having the form of cumulus cloud.

cumulo-cirro-stratus .kcumio-lo-sizo'stree-tos n. (rare) nimbus; rainscloud.

cumulo-cirrus ,kçumjo-lo'sızəs n. [also spelt cumulocirrus; ploral cumuloscirri] a cloud of cumulus structure but cirrus position; an alto-cumulus cloud.

cumulo-nimbus ,kcumjo-to'nımbəs n. [ploral cumulo-nimbi]

thunderscloud, showerscloud.

cumulo-stratus ,kçumjo-lo'stree-tos n. [ploral cumulo-strati] a form of cloud in which the structure of the cumulus is mixt with that of the cirrosstratus or cirroscumulus, the cumulus being at the top and overhanging a flattish stratum or base.

cumulous 'kçumjo-ləs adj. heap-like; of the nature of cumu-

lus cloud: cumuliform.

cumulus 'kçumjo-ləs n. [ploral cumuli] a form of cloud consisting of white convex or conical masses heapt upon each other and having a nearly horizontal base; day-cloud; summer=cloud; wool=pack clouds.

turreted cumulus, a large cumulus cloud having turretelike covers the sky in the regions of the tradewinds.

trade cumulus, a kind of small detacht cloud which often

masses rising from its top; a thunder-cloud.

ocean current, a current or stream in the water of the air.

cumulus-like 'kçumjoləs,laık adj. like cumulus cloud; resembling cumulus.

curl-cloud 'ka:zl,kzaod n. cirrus; cat'sstail.

current 'kszent n. that which flows; a stream; a portion of a body of air moving in a definit direction; an aircurrent.

ascending current, a current of air which is ascending or rising: a rising current.

convectional current, see under convectional.

downthrow current, an air current which has a downward throw or trend; a falling or descending current of ocean, such as the Gulf Stream.

upper currents, the currents or motions high up in the

curtain 'ksztn n. an aerofoil placed vertically, as between the main supporting surfaces of some biplanes; a vertical surface in a cellular or box-kite structure; a panel; a partition.

curve 'ks:zv n. [also spelt curv]

curve of torque, a plotted curv, or curvd line, showing the relation between the torque or twisting-force acting on a propeller and the thrust or the speed of revolution of the propeller.

inflected curve, a fugord curv of the inflected type.

tumbler curve, a fugerd curv of the type characteristic of

the tumbler pigeon.

cusp kasp n. a point or apex; a point at which two branches of a curv meet and step, with a common tangent; a point at which the moving point describing a curv has its motion exactly reverst; also, an analogous point on a curvd surface; a spinode; a stationary point.

custom 'kastem n. a tribute, toll, impost, or duty, levied by a national or local authority upon the entry of commodities or goods into his dominion; a duty levied on imports:

an importstax.

eut-air 'kat,e:z n. a rigid shield at the front of an airship, or a rigid edge on an aeroplane or wing, so shaped as to cut or plow thru the air and thus reduce the atmosferic resistance to motion. eyclonal ,sar'k200-ni, 'sar-k20-ni adj. of, pertaining to, or of the nature of a cyclone: cyclenic.

cyclonal gradient, see under gradient.

evelone 'sarkton n.

1. any storm or atmosferic disturbance in which the wind has a circular, whirling, or rotatory motion, as a hurricane or tornado of limited diameter and destructive violence; a tornado.

2. a system of winds or atmosferic currents, often extending over an area having a diameter of several hundred miles and rotating round a center of minimum barometric pressure and relativ colm which itself usually has a translatory motion.

land cyclone, a cyclone or cyclonic system of winds

which is located over a land surface.

ocean cyclone, a cyclone or cyclonic system of winds

which is located over the ocean.

polar cyclone, the hypothetic cyclone in the north or the south polar region of the earth; the supposed system of rotatory atmosferic currents, with cold a center, from which the lower air flows outward and the upper air flows inward. cyclone-center 'sai-kron, senter n. the center of a cyclone

or area of low barometric pressure.

cyclone-flood 'sai-kron, frad n, the flood accompanying a cyclone, due to the wave of water formd by the storm; a storm=wave.

cyclone-path 'sai-kron,pa:θ n. the path or route along which a cyclone moves.

cyclone-pit 'sar-kron,pit n. a pit or underground room made for refuge from a tornado or cyclone.

cyclone-wave 'sai-klon, weev n, the wave of water produced by a cyclone.

cyclonic ,sar'krenik adj. of or pertaining to a cyclone or cyclones: of the nature of a cyclone. of a core meet and step with 50 camon in

1. tr. depress, diminish, lower, deden: as, to *damp out the amplitude of fugoid waves.

2. intr. become deprest or lowerd; diminish, decrease.

danger-zone 'deen-dzez,zoon n. a zone or region of danger. as about the cusp of a pletted fugerd or flightscury.

dart do:zt n. a pointed missil thrown by the hand; a light spear or javelin: also, an arrow.

dart dazt intr. move thru the air like a dart, as a Malay kite; spring or stort with a sudden rapid motion; shoot.

date-line 'deet,lain n. the boundary-line between contiguous regions of the globe where the calendar is different; the (practically somewhat devious) north-and-south line thru the Pacific ocean (theoretically) identical with the meridian of 12 hours or 180 degrees from Greenwich, England) east of which the nominal date is one day earlier than on the west of it.

dawn do:n n, the first appearance of daylight in the mor-

ning; daybreak.

false dawn, a transient light, resembling dawn, but appearing about an hour before actual daybreak. day dee n.

1. the time of sunlight: the interval between the rising

and setting of the sun.

break of day, the bursting forth or first appearance of light in the morning; the dawn; daybreak.

clear day, a day in which the sky is clear. see clear sky,

under skv.

dark day, any day in which the sunlight is dim or absent, or the atmosfere foggy or smoky, due to prairie or forest fires, volcanic eruptions, etc.

high day, the time when the sun is in the meridian; high

2. the time occupied by the earth in making one complete turn on its axis; the space of twenty-four consecutiv

apparent solar day, the day or interval of time between two successiv meridian transits of the sun.

change of day, a change of one's reckoning in circumnavigating the globe, when, by the calendar, a day is lost or gaind.

gained day, the calendar day which is gaind or reckond twice at the date-line in circumnavigating the globe from west to east.

lost day, the calendar day which is lost or dropt out at the date-line, in circumnavigating the globe from east to west.

sidereal day, the interval between two successiv transits

of a given stor.

daybreak 'dee, bzeek n. the break of day; the first appearance of light in the morning: the dawn.

day-breeze 'dee,bziiz n. a periodical breeze or light wind occurring in flat inland regions.

day-cloud 'dee,kzood n. cumulus cloud; summer-cloud.

day-dawn 'dee,dc:n n. the dawn of day; daybreak.

dead ded adv. [also spelt ded] directly, exactly, straight: as,

facing *ded into the wind; *ded ahed.

dead-reckoning 'ded,zeka-nin n. [also spelt dedzreckoning] the reckoning or calculation of an airship's position independently of observations of the hevenly bodies, merely by distance and direction, run, etc.

dead-water 'ded,wc:-təz n. [also spelt dedswater] air or other fluid without current; still air; the eddysair or eddyfluid just behind the stern of an aerofoil or airship; distin-

quisht from live stream. see under stream.

deadweight 'ded, weet n. [also spelt dedweight] the relativly ded or inert weight or load other than the living passengers, carried by a balloon; the weight of the balloon itself, as distinct from its live (or paying) weight or load.

death-blast 'deθ,bla:st n. a dedly blast, as of het gas near

a volcano; a deth-dealing wind or storm.

deck dek n. one of the platform-like hozizontal planes of a biplane or multiplane; a main surface in an aeroplane flyer

deflate dr'freet tr. release the air or gas from anything inflated, as a balloon; remove the gas from: the opposit of

inflate.

deflation dr'flee-son n. the act or process of deflating; an emptying or letting out the gas from the gasbag of a balloon: the opposit of *inflation*.

deflect dr'frekt tr. bend or turn to one side or from a straight line; change the direction of; cause to deviate from

its course.

deflecting-plane di'flektin, pleen n. a plane or aerofoil in a flying-machine, used for deflecting or changing the course of the craft; a horizontal rudder; a deflector.

deflector di'frekter n.

1. a metal plate used to deflect or to direct the flow of air or other gas, as in aerodynamic experiments; a baffles plate.

2. a plane or aerofoil in a flyingsmachine, used for deflecting or changing the course of the craft; a deflectings plane.

demountability di, moun-tə'bili-ti n. the quality of being

demountable.

demountable ,di'moun-tə-bəl adj. that may redily be taken aport or knockt down, for shipment, and easily reassembled: as, modern *demountable aeroplanes. compare collapsible.

density-gradient 'densiti, gzee-di-ant n. the gradient of the

density of the air; the rate of variation of atmosferic

departure dr'partsəz n. (seasterm) the distance (in nautical miles) by which a ship in sailing departs or moves east or west from a given meridian; change of lengitude; also, the bearing of an object on the coast, taken at the commencement of a voyage, from which the dedsreckoning begins.

depression dr'pseson n. condition or action of being deprest or lowerd, as a balloon in the air; a low place; a condition or region of deprest or lowerd barometric pressure, as indicated by an isobar; a low-pressure line or area; a low.

barometric depression, a depression or lowness of the barometric readings, due to diminution of atmosferic pressure.

depression of the dew-point, see under dew-point.

secondary depression, a depression in a barometric pressure adjacent to a larger depression; a kink or loop in one or more of the isobars of a low, often indicativ of rain, and in summer, especially of thunderstorms.

Veshaped depression, an area of depression of barometric pressure whose isobars intersect like the lines of the letter

V. as on the side of the trough of a cyclone.

derecho di'zee-tso n. a strong wind or squall blowing in a straight course, with no apparent rotatory movement.

derrick 'dezik n. a hoisting-apparatus for operating the falling weight which is sometimes used in starting an aeroplane flying-machine; a launching-derrick; a starting-derrick; a catapult; a pylon.

descend dr'send intr. go or come down; move downward toward the land or water underneath; fall gradually and

easily to or toward the surface of the earth.

descending-position dr'sendin-pa,zisan n. the position of the rudder of a flying-machine appropriate to descending or sinking toward the ground.

descensional dr'sensoni adj. of descension or descent: as, ascensional and *descensional movements of the atmosfere.

descent dr'sent n. the action of descending to or toward the surface of the earth; a going or coming down to the ground; downward motion towards the land or water underneath.

gliding descent, a descent, as of a flying-machine to the earth's surface, made by means of gliding; a downward glide or volplane. *see glide.

deviation , divi'se-son n. the deflection of the needle of a

ship's compass, owing to the magnetism of the iron in the ship, or other local cause.

deviator 'dri-vi, et az n. an apparatus attacht to a balloon by a rope and intended to trail along behind in the sea and thus deviate or turn the balloon from its normal course.

dew diou n, the moisture occurring in minute drops on the grass or any cool surface, due to the condensation of the water-vapor in the air towards or during the night after a het day, and especially plentiful in the early morning.

dew-bow 'djou,boo n. an iridescent bow or halo, seen on a surface coverd with dew; a rainbow-like effect caused by

dewsdrops.

dew-fall 'djou,fc: in. the fall, formation, or deposition of dew; a fall or deposit of dew; also, the time when this begins, in the evening.

dew-point 'djou, point n. that point or degree of the tempe-

rature of the air at which dew begins to form.

complement of the dew-point, the number of degrees by which the temperature of the dewspoint is below the temperature of the air; the depression of the dew-point.

depression of the dewspoint, the extent to which the dews point is deprest below the temperature of the air; the com-

plement of the dewspoint.

dewspoint apparatus, an apparatus for determining the dewspoint.

dewspoint hygrometer, see under hygrometer.

diagonal ,dai'ægə-ni n. a diagonal brace or stay in the

framework of a flying-machine; a cross-stay.

diaphragm 'dai-ə,fsæm n. [also spelt diafram] a septum, membrane, sheet, or any thin partition, as that dividing one compartment of the gasbag of a balloon from another. diedral ,dai'ri-drat adj. same meaning as dihedral.

dietheroscope ,dai-1'0ezə,skop n. an instrument for show-

ing the refraction of the air in mirage.

dihedral ,dar'hii-dral adj. [synonymous cognate diedral] furnisht with, or containd by, two planes or plane faces: said of a pair of wings or aerofoils inclined upward and away from each other.

dihedral angle, the solid angle formd by two planes; the inclination of two planes, as aeroplanes or wing-surfaces, which meet or approach each other usually at their lower

dilatation ,dar-lo'tee-son n. the action or process of dilating; the state of being dilated; expansion, as of a balloon.

dimensional dr'menso-ni adj. relating to dimension or magnitude: as, *dimensional theory.

dip dip n.

1. an act of dippring; a brief downward plunge thru the

air, as of an aeroplane.

2. the downward inclination of the magnetic needle at any particular place; the angle which the needle makes with the horizon.

3. the angular distance of the visible horizon below the horizontal plane thru the observer's eye; the depression of the horizon due to the observer's elevation, which has to be allowed for in taking the altitude of a hevenly body.

4. the angular depression or inclination of one or the other end of an airship; the downward slope of the craft,

fore or aft.

- dip dip intr. incline downward; slope: as, to *dip and swoop.

 dipping front edge, a form of front or fore aerofoiledge which dips, slopes, or inclines downwards; the drooping front edge of a wing or other aerofoil; the archt form of wingssection.
- dip-the-dip 'dip-də,dip adj. characterized by the making of a sudden dip or downward durt in the air comparable to a shooting of the chutes or toboggan-slide on the ground.
- dipper 'dipez n. any swimming bird which dips into or dives in the water with great ease and rapidity, as the grebe.

dipping 'dipin n. the action of the verb dip; the process of

sloping downward for a brief space of time.

dipping-needle 'dipin, nii-dl n. a magnetic needle mounted so as to be free to rotate in a vertical plane about its center of gravity, used for determining by its dip the direction of the earth's magnetism or magnetic pole; the needle of a dipping-compass.

dipter 'dipter n. one of the diptera; a two-wingd fly.

diptera 'diptə-zə n. pl. the two-wingd flies, a large order of insects having one pair of membranous wings, with a pair of halteres or poisers representing a posterior pair.

direction-maintenance drzekjen, meentn-ens n. the maintenance of the general direction of the course of an aerodone or airscraft; the keeping up, or persistence in, a given flightspath thru capacity to resist diverting forces, as by means of an abutment fin; directional maintenance.

direction-rudder drzeksen, zadez n. a rudder used for controlling the horizontal direction of a flying-machine; a side-to-side rudder; a horizontal rudder for lateral steering.

dirigibility ,dizid39'bili-ti n. the quality of being dirigible or steerable.

dirigible 'dızıd39-bəl, (improperly) dı'zıd39-bəl adj.

1. capable of being directed or guided; steerable.

2. of or concernd with dirigible balloons.

dirigible 'dızıdzə-bəi n. a dırıgible balloon; a lightersthans air airship; as, a war *dırıgible.

discontinuity ,dis-kentr'nju-i-ti n. the quality or state of being discontinuous; want or failure of centinuity; interrupted condition.

kinetic discontinuity, a discontinuity in the kind or in

the course of motion.

physical discontinuity, discontinuity in the kind of

matter.

surface of discontinuity, the surface which separates the live stgeam from the ded-water in the rear of a body of imperfect stgeamline form in its course thru the air or other fluid.

disembark ,disəm'ba:zk n. land from an airship; get out

upon the ground, as at the end of a voyage.

disk disk n. [also spelt disc] the highest portion of the thorax or elytra of an insect, seen from above; the central part of the wing.

dispatch-bag dr'spæts, bæg n. a bag used in sending di-

spatches or messages from a balloon to the earth.

dispatch-craft dr'spæts,ksa:ft n. pl. airscraft used for send.

ing dispatches or messages.

displacement ,dis'plees-ment n. the quantity or weight of fluid which is displaced by a solid body (as an airship) placed in it.

distance-piece 'distns,piis n. a spor or other piece, as of wood, which is inserted between two objects to separate

them or keep them a certain distance apart.

diurnal ,dai'sznł adj.

1. performd in or occupying one day; daily.

2. of or belonging to the day as distinguisht from the

night: the opposit of nocturnal.

dive daiv n. a sudden dort downward, as of an airscraft; a descent or plunge hed first; a heder: as, a spiral *dive, a winding *dive, a sweeping *dive.

high dive, a dive or steep quick descent made in a fly-

ingsmachine from high up in the air.

low dive, a dive or steep quick descent made in a flyingmachine from a low altitude above the earth.

spiral dive, see under spiral.

dive daiv inir. [past participle dived; preterit dived and, sometimes, dove] dart suddenly downward; descend hed first precipitately. diver 'day-vaz n. a bird which habitually dives, as a grebe,

loon, or penguin; a diving bird.

dizzy 'dızı adi, having or causing a whirling feeling or vertigo; giddy: as, a *dizzy height, a *dizzy flight, a *dizzy peise, a *dizzv mist.

doldrum 'doldram n. (seasterm) a region in which ships are

specially liable to be becalmd.

equatorial doldrums, the region of calms and light baffling winds near the equator, where the tradewinds meet and neutralize each other.

double 'dabat intr. go or fly back: return: as, to *double on

one's course.

double-decked .dabel'dekt. (assumptivly) 'dabel.dekt adj. [also spelt double-deckt] furnisht with, or consisting essentially of, two decks or planes, one above the other, as a biplane flyer or horizontal rudder; having two parallel superposed aeroplanes or aerofoils.

double-decker ,dabəl'dekəz n, an airship which has two decks or planes, one above the other, as a biplane; an aeroplane flying-machine having two parallel superposed aero-

feris.

double-sailing 'dabəl, see-lin adj. sailing in a double or twofold way, because of having two aeroplane sustainingsurfaces insted of one.

double-surface 'dabel.sezfis adi. having two sustainings

surfaces, as a biplane; double-deckt; double-surfaced.

double-surfaced ,dabəl'sBzfist, (assumptivly) 'dabəl,sBzfist adi, furnisht with two sustaining surfaces, as a biplane: double-surface; double-deckt: distinguisht from single-sur-

double-vaned 'dabal, veend adj. having two vanes or blades,

as a screw propeller.

double-winged 'dabal, wind adj. [also spelt double-wingd] having two wings or aeroplanes, one above the other: said of flyingsmachines: doublesdeckt.

down-draft 'doon,dra:ft n. [also spelt down=draught] a

downward draft of air; a descending airscurrent.

downfall 'down.fc: 1 n. the action of falling: a sudden descent, accidental or intentional; a swooping down.

down-feather 'daun, fedez n. [also spelt down-fether] one of the fuzzy fethers, usually small, constituting the down or fine soft under plumage of swans, ducks, etc.; a plumule.

downpour 'down,po:z n. [also spelt down-bour] a pouring

down of rain; a hevy continuous fall of rain.

downshoot 'down, fout n. a downward or sharp quick descent thru the air: a swoop.

down-stroke 'doon, strok n. the downward stroke or sweep of a reciprocating part such as a flapping wing: the opposit of upstroke.

downways 'doon, weez adv. in a downward way; downwards.

draft-kite 'dra:ft,kait n. the lower of the two kites used in Wenham's kitescarriage, designed to furnish the drafting, drawing, or tractiv power, and distinguisht from the upper or draft kite; a carrying-kite. compare pilotskite.

drag dræg intr. be drawn, pold, or hauld along as the dragrope of a balloon on the ground, or an airship on the ground or on the surface of water; also, move with undue friction, as a flying-machine in its passage thru the air.

drag dræg n. the action or fact of dragging; the impediment placed in the way of free motion; specifically, the difference between the speed of a ship and that of its screw propeller when the speed of the ship is greater than that of the screw; the slip.

viscous drag, the drag occasiond by a viscous fluid upon

a solid body moving thru it; entrainment.

drag-line 'dræg, san n. a line of definit length one end of which is attacht to a kite while the other end drags on the ground, its purpose being to keep the kite in the air, or to regulate its motion or position, by means of the friction of the line on the ground.

dragon-fly 'drægon, flas n. any neuropterous insect of the group Libellulina, characterized by a long slender body, large eyes, and two pairs of large reticulated wings, and by their strong, swift flight: as, a mechanical *dragon-fly.

dragon-kite 'drægon,kart n. a Chinese kite consisting of a series of light elliptic bamboo disks and Indiaspaper, decorated and garnisht and undulating in the air so as to re-

semble a dragon or crawling serpent.

g-rope 'dræg,zoop n. a rope of definit length attacht to e car of a balloon or dirigible and allowd to hang down that when the ship approaches too near to the earth, the rope drags along on the surface of the land or water and thus, by lightening the load; causes the ship to rise, or at least prevents it from descending any further; a guider rope; a balancer.

drift drift n.

1. the fact or state of being driven; slow course or cur-

rent: as, the *drift of the air or of the clouds.

planetary drift, the drift of the air in the planetary circulation of the earth's atmosfere; the drift of the planetary winds.

2. lateral deviation, as of a projectal from its path; ten-

dency to move sidewise.

3. the force with which a fluid, as the air, presses horizontally upon an aerofoil, either backward or forward, as the case may be; the horizontal component of the air-pressure on a kite, aeroplane, or airship; the backward posh or thrust (or, sometimes, the forward pull) of the atmosfere or wind upon an aeroplane or aerocury: distinguisht from lift. compare headeresistance.

drift drift intr.

1. float or be driven along, as an airship, by a current of air; be carried at random by the force of the wind.

2. tend, move, or be posht or thrust herizontally backward (or, less usually, forward) somewhat, relatively, by the

pressure of the air.

drifter 'drifter n. any aerial craft of the type which tends to drift or float along with the air, rother than actually fly or move under the complete control of the operator; a lighter-than-air machine.

drifting-force 'driftin, fo:zs n. the force or strength of the tendency of an aerofoil to drift. see drift (verb, sense 2).

drive draw n. a driving or propelling mechanism; also, the mode of being driven: as, a flexible *drive; the direct *drive of a helicopter.

chain drive, transmission of power from the motor of an airship to the driving-apparatus or propeller by means of a

chain.

driver 'drai-vəz n. one who drives or operates a flyingsmachine; an aviator.

driving-power 'drai-vin,pau-əz n. the motory power employd or kept in reserv for driving or propelling an airship; power or capacity to drive; propulsiv power.

drome droom n. an aerodrome; a flyer; an aero.

droop droup n. a downward bend; the curvature, concave downward, of the margin of a wing; the hanging cut the archt form of a wing-section; the dipping edge a sustaining-surface; the arch of an aerofoil. compare dip (verb) and arch.

drop drop intr. fall, sink, or descend, as thru the air to or

toward the ground.

drop drop n. the action of dropping, sinking or falling thru
 the air; a descent: as, a long *drop, a corkscrew *drop.
droplet 'droplot n. a little drop, as one of the water particles

of a water-cloud.

drosometer dro'somi-toz n. a weighing=instrument for mesuring dew. duration-contest djo'zee-sən,kon-test n. a contest as to duration of flight; a competitiv trial of flyers as to capacity to stay up in the air in continuous flight without alighting.

duration-prize djo'zee-sən,psaiz n. a prize or premium offerd or won for flight of long duration; a trofy for longest

continuous light without alighting.

dusk dask n. gloom, shade; the darker stage of twilight just before night; also, the stage of partial darkness just before dawn or daybreak.

dusky 'daski adj. somewhat dusk or dark; darkish, gloomy,

shadowy.

dust dast n. earth or other solid matter in the form of fine dry particles, floating in the air; powdery or granular matter in the atmosfere: as, a cloud of *dust.

dust-counter 'dast, known-toz n. an instrument for mesuring the amount of dust or particles of solid matter in the air

or atmosfere. compare coniscope.

dust-fog 'dast, fog n. a whitish fog formd of the finest mist

or vapor-dust; dust-vapor fog.

dust-haze 'dast, heez n. a haze, or misty appearance of the atmosfere, usually of reddish or yellowish hue, consisting of or due to dust.

dustiness 'dasti-nis n. the state of being dusty or contain-

ing dust; dusty condition of the air or atmosfere.

dust-shower 'dast, \(\) \(\) \(\) a shower or light downpour of dust (with or without rain or snow) due to a cloud of dust having been carried into the upper atmosfere and precipitated. compare \(sea \) \(\) \(\) dust.

dust-wapor 'dast, vee-poz n. same meaning as vapor dust.
dust-wind 'dast, wind n. a wind that brings dust sterms,
such as the northwesterly gales on the eastern coast of

Australia.

dust-wisp 'dast, wisp n. a wisp or delicate spray or streak of dust or ice-particles, usually of grayish-white color, floating high in the sky at sunset or sunrise.

dynamic di'næmic adi.

1. of or relating to force or energy: contrasted with kine-

matic, and often, loosely, with static.

dynamic cooling, the cooling or lowering of temperature of a portion of the atmosfere due to the expenditure of some of its internal heat energy in expansion occasiond by inferior atmosferic pressure from without.

dynamic heating, the heating, warming, or rise of temperature of a portion of the atmosfere due to compression occasiond by superior atmosferic pressure from without. dynamic stability, see under stability.

2. mechanically propeld or lifted; motorsdriven: said of gasless or heviersthansair power flyingsmachines.

eagle 'ii-gəl n. any one of various large diurnal birds of prey, especially one of the genus Aqurla or Haliaetus, well-known for their strength, keen vision, and graceful and powerful flight; the 'king of birds.'

earth-contact '8:zθ,kon-tækt n. the action or fact of coming into contact with the earth; a contact with, or a touch-

ing of, the earth, on the port of an airship.

earth-force 'B:z0,fo:zs n. the force of attraction of the

earth; gravity.

earth-harbor 'a:zθ,ha:z-bəz n. [also spelt earth harbor] an airshipsharbor in the earth; an underground harbor or refuge for airscraft.

earthman '8:20-mon n. [ploral earthmen] a man who habitually stays upon the earth or ground: distinguisht from

airman.

earthward 'B:zθ-wəzd adv. toward the earth or ground;

downward.

eclipse I'krips n. an interseption or obscuration of the light of the sun, moon, or other hevenly body, by the intervention of another hevenly body either between it and the eye or between it and the source of its illumination.

eddy 'edi n. a portion of a body of air or other fluid which has a rotary motion; a small whirl or vertex in a fluid.

edge ed3 n. the narrow outer portion or margin of the fore part of a bird's wing, aeroplane, or other aerofoil.

advancing edge, an edge which advances or precedes another; the front edge of a sustaining-plane or other aerofoil; the leading edge: the opposit of following edge.

following edge, an edge which follows or comes after another; the rear edge of a sustaining-plane or other aerofoil; the rearward edge; the trailing edge: the opposit of advancing edge.

front edge, the edge of a wing, aeroplane, or other aero-

foil which is located in front; the advancing edge.

leading edge, the edge (of a wing or other aerofoil) which leads or comes first, in flight; the advancing edge; the front edge: the opposit of following edge.

trailing edge, the rear edge or margin (of a wing or other aerofoil), considered as trailing thru the air; the posterior margin of an advancing aerocury; the following

edge: the rearward edge: distinguisht from advancing edge, front edge.

edge-effect 'ed3-1,fekt n. an effect produced by the edge

of a wing, aeroplane, or other aerofoil.

edge-resistance 'edz-zi, zistns n. the resistance to the air offerd by the edge of an aerofoil.

efflux 's.fraks n. a flowing outward of air or other fluid; outflow.

eggoon .e'goun n. an egg-shaped airship or balloon.

egg-shaped 'eg, seept adj. having the shape or form of a

hen's egg; oveid.

elbow 'el-bo n, the definit bend where the main body of the sustaining vessel or hull of some dirigible balloons begins to curv toward its pointed bow or stern.

electrohygroscope i.lektrə'hai-gzə,skop n. [also spelt electroshvaroscopel an instrument for showing the amount of

electricity and humidity in the atmosfere.

electrolytic i.lektrə'litik adi, pertaining to electrolysis or decomposition by an electric current, as of water into exvgen and hydrogen; as, an *electrolytic plant for generating hydrogen.

electrometer ,ilek'tgomi-təz n. an instrument for mesuring the difference of electrostatic potential between two conductors, used for investigating atmosferic electricity.

electroscope r'lektraskop n. an instrument for showing the presence of free electricity, as in the air, and for determining its kind.

elevating-engine 'sir-vetin, end3in n. the engin, in an airship, which is used for elevating or forcing the craft

upward thru the air.

elevating-lever 'eli-vetin, lii-vəz n. a lever, in an aeroplane flying machine, by the manipulation of which the

craft is elevated or caused to rise.

elevating-plane 'Eli-vetin, pleen n. a plane or aerofoil forming part of a flying-machine and used in elevating the craft or inclining it upward; the front horizontal rudder of an aeroplane flyer.

elevation ,elr'vee-Son n.

1. the altitude or angular height of the pole or any hevenly body above the horizon: the angle of any line of drrection above the horizon.

2. a particular altitude or height above the surface of the earth, or above any given level, as that of the sea; also, height, leftrness.

elevator 'eli, vetəz n. an elevating plane: as, a duplex *elevator, a flexible *elevator.

elevator-outrigger 'eli-vetəz, aut-zigəz n. the outrigger, in a flying-machine, which supports the elevator or elevatings

elevator-surface 'elr-vetoz.spzfis n, the aerofoil surface of

an elevator or horizontal rudder.

ellipse I'lips n. a plane curv such that the sums of the distances of each point in its perifery from two fixt points or foci, within the perifery, are equal.

Elmo 'el.mo n.: Elmo's fire. Saint Elmo's fire. Saint Elmo's

light. same meaning as corposant.

elytra 'eli-tro n. pl. see elytron.

elytron 'sirtron n. [ploral elvira] the hard outer wingscase, or modified fore-wing, of a coleopterous insect or beetle; a shard, wingscover, or wingssheath.

elytrum 'eli-trom n. same meaning as elytron,

emargination i, mozdar'nee-fon n, the process or state of having the morgin taken away; a somewhat abrupt narrowing or incision of the web of a bird's fether toward its end or extremity; a slight forking, as of a bird's tail.

emergency-wing i'mszd3ənsi,win n. a supplementary wing or aerofoil in a flying-machine, designed for use in case of an emergency to prevent a sudden or disastrous fall; a

parachutesplane.

empyrean ,em-par'zii-ən, ,empr'zii-ən, ,em'pizi-ən n. highest heven.

encircle en'sprket tr. make a circling movement about;

circle round; circumnavigate.

end-surface 'end, spzfis n. the surface at the (front) end or extremity of the float-vessel of a dirigible balloon.

endurance-flight in'djo:-zons,flait n. a flight in which the power of endurance or staying power of a flying-machine is tested; a long continuous flight made with a view to proving how long an airship can hold out in flight or stay up in the air; an aerial endurance trip.

energy 'enez-dai n. the power of doing work; actual or po-

tential capacity for causing motion in matter.

energy of translation, the capacity of a body for doing work in virtue of its motion of translation; the energy of

translatory motion.

engine-failure 'endzin, fee-liez n. failure of the engin or power-plant of a flying-machine to work, during flight; a giving out of the motor of an aeroplane.

entomology, ento molo-d51 n. the science of insects. entrainment, en'treen-mont n. the drag occasiond by a viscous fluid upon a selid body moving thru it; viscous drag. entrance 'entrans n. the hed and shoulder (taken together) of an aerofeil or streamline body; the bow or forebody of an airship of streamline form: distinguisht from run.

entrant 'entront n. one who enters, as in an airship-race. entry 'entry n. a going in; the action of entering; an entrance.

angle of entry, see under angle.

envelop 'envelop n. [also spelt envelope] the integument or cover forming the chief part of the gasbag of a balloon; also, the outer flexible cover or rigid shell enclosing the gas-receptacles of a dirigible.

envelop-construction 'envo-lop-kon.strakion n. falso spelt envelopesconstruction] the process of constructing balloons

envelops: the making of envelops.

envelop-material 'envo-lop-mo,tr:-zi-ol n. [also spelt envelobe:material the material or stuff used in making balloons envelops; envelop-cloth; balloon-fabric.

envelop-stuff 'envo-lop, staf n. [also spelt envelope=stuff] the stuff or fabric of which the envelop of a balloon is made: balloonsfabric.

equalizer 'ikwə,lar-zəz n. [also spelt equaliser] a leveler, an evener, or an adjuster; that which equalizes or makes equal, even, or level, as the front rudder of a biplane,

equator i'kwee-təz n.

1. (in astronomy) an imaginary great circle of the celestial sfere, whose plane is perpendicular to the axis of the earth; the celestial equator; the equinoctial.

2. (in geography) an imaginary great circle of the earth. in the plane of the celestial equator, and equidistant from

the poles; the geografic equator.

hydrometeoric equator, the equator of rainfall, or line girdling the earth and dividing the regions having the rainfall characteristic of the northern winter half-year from regions having the rainfall characteristic of the southern summer half-year and vice versa; the pluviometric equator: as, Supan's *hydrometeoric equator.

magnetic equator, a line girdling the earth in the neighborhood of the geografic equator, at every point of which the vertical component of the earth's magnetic attraction

is zero; the aclinic line.

meteorological equator, the line or narrow tract girdling the earth, near the geografic equator, situated midway between opposing winds and corresponding to the belt of calms.

bluviometric equator. same meaning as hydrometeoric

thermal equator, the line girdling the earth, in various

positions at different seasons of the year, etc., and passing thru the points of maximum temperature; the line along which the greatest heat occurs at the earth's surface.

3. an imaginary great circle of the gasbag of an inflated sferical balloon, whose plane is perpendicular to the vertical axis of the balloon.

equatorial .ikwə'tə:-zi-əl adi, pertaining to the equator of the gasbag of a balloon.

equilibrate ikwi'lar,bzet tr. bring into or keep in a state of

equilibrium or equipoise; equilibrize; balance.

equilibration .ikwili'bzee-son n. the action or process of bringing into or keeping in equilibrium or equipoise; the

state or condition of being balanced.

equilibrator ikwr'lar,bzetəz n. a long ropeslike device attacht to a dirigible balloon and capable of being lowerd and raised in order to equilibrate or study the craft or keep it at a certain constant height, as from the surface of the

sea below; a balancer; a guide-rope.

equilibrium ,ikwi'libzi-əm n. [ploral equilibria] the state or condition of equipoise; the state of a material system in which the forces acting on the system are evenly balanced, or such that their resultant is zero; the state of an airship when the resultant of all the airspressures upon it is vertical and passes thru the center of gravity of the craft: balance.

atmospheric equilibrium, the state of equilibrium or balance among the various parts of the atmosfere, as related to herizontal or vertical movements of the air, etc.

automatic equilibrium, same meaning as automatic bal-

ance. see under balance (noun).

equilibrium of direction, equilibrium or stediness in the general direction of the course or flight-path of an aerodone, such as is provided by a directiv fin or wind-vane. and identical in kind to that which is afforded an arrow by its fether; directional equilibrium, balance, or stability. compare directionsmaintenance.

lateral equilibrium, same meaning as lateral stability.

see under stability.

longitudinal equilibrium, same meaning as longitudinal stability. see under stability.

moving equilibrium, equilibrium in which the body concernd is in motion; the condition of having equilibrated or balanced movement.

neutral equilibrium, equilibrium in which the body concernd is neutral or indifferent as to its exact position, er. whenever moved slightly from its position, will remain in its new position; the equilibrium of a directionally bal-anced aerodone; indifferent equilibrium.

stable equilibrium, equilibrium in which the body concernd, whenever slightly moved out of its position, tends

to return to its position.

unstable equilibrium, equilibrium in which the body concernd, whenever slightly moved out of its position,

tends to depart from it still further.

vertical equilibrium, the state of equilibrium or balance of an airship whose flight is being maintaind at the equilibrium-level, there being no advantage in changing its altitude or vertical distance from the earth.

equilibrium-level ikwr'irbzi-əm'ievəl n. the level or horrzental plane of equilibrium or balance, for any given airship, so for as concerns its speed or economies of travel; the level of optimum altitude for an aeroplane or other airship, at which it is in vertical equilibrium, or cannot easily rise higher or advantageously sink lower.

equilibrize i'kwili,bzaiz tr. [also spelt equilibrise] equili-

brate: balance.

equinoctial ,ikwr'noksoł adj. pertaining to a state of equal day and night; also, pertaining to the period or point of the

equinox: as, an *equinoctial storm.

escape-valve, e'skeep,vælv n. [also spelt escapesvalv] the valv in the envelop of a balloon by which gas is allowd to escape from the bag, thus causing the craft to descend; a balloon=valv; a safety=valv.

ether 'ni-0 > n. [also spelt gether]

1. the upper air; the blue hevens.

2. a hypothetic medium possessing great elasticity together with other qualities of a somewhat paradoxical nature, supposed to be diffused thruout space, to pervade all material bodies, and to serv to transmit light, heat, and other forms of radiant motion.

ethereal r'on:-zi-əl adj. [also spelt etherial and, formerly,

aethereall

1. formd of, containing, or fild with the ether or air of the upper regions; of or pertaining to the havens; havenly; celestial: as, *ethereal space, *ethereal regions.

2. of or pertaining to the ether of space: as, the *ethereal

medium.

euplexoptera ,jupiek'sopto-zo n. pl. a suborder of orthopterous insects identical with the order Dermaptera, having the under wings folded crosswise and lengthwise; the earwigs or Ferficulidae; the Eupleceptera.

evaporometer i,væpə'zemi-təz n. an instrument for mesuring the quantity of liquid, as water, evaporated in a given time: an autometer.

exhaust-muffler ,eg'zc:st,maft > n. the muffler on the exhaust of an internal-combustion engin: a muffler; a silencer.

expanding-nower .ek'spændin.pqu-ez n. power to cause ex-

expanse ,ek'spæns n. the expanse, extent, or stretch of the outspred wings of an insect or bird; the distance or mesurement from tip to tip of the outstretcht wings; stretch of wing; expanse of wing; extent of wing; alar extent; alar expanse: wingspred (sense 1).

exploring-balloon .ek'spro:-cin-balloun n. a small balloon to which recording instruments are attacht, used for ex-

ploring the atmosfere: a registration-balloon.

exploring-gun .ek'spzo:-zin.gan n, a proposed gun or small cannon, as at the nose of an airship, to be used for exploring the atmosfere by means of explosiv shells, etc.

extensor , ek'stensəz n. a muscle which servs to extend, straighten out, or unfold any port or member, as a wing:

the epposit of flexor.

extent , ek'stent n. the extent, expanse, or stretch of the outspred wings of a bird or insect; the tip-to-tip mesurement of the wings; extent of wing; expanse of wing; stretch of wing; alar extent; alar expanse; wingspred (sense I).

eve ai n.

1. opposed aspect or course; confronting presentation or direction: as, to sail in or into the wind's *eve: to steer a ship in the sun's *eye.

2. something suggesting an animal or human eve in

shape, position, or the like.

eve of a storm, see under storm. eye of the wind, se under wind.

eye-spot 'ar, spot n. an eye-like spot, as in the wing of a butterfly, in the wing of an grous-fesant, or in the tail of a peacock; an ocellus.

eyrie 'E:-zi, 'I:-zi, 'AI-zi n. same meaning as gerv.

eyry 'E:-ZI, 'I:-ZI, 'BI-ZI n. same meaning as aery.

face fees n. that side of a kite which is usually seen from the ground when the kite is aloft, and which is toward the direction from which the wind is blowing; the front.

falcate 'fc:1,ket adj. bent or curvd like a sickle; hookt: as, a wing *falcate at the tip.

falcated 'fc:1,ketrd adj. curvd like a sickle; sickle-shaped;

hookt: falcate.

fall fc:1 n. descent from a higher to a lower position, due either to the force of gravity or to artificial impulse or power; a dropping or tumbling down; a downfall; a drop.

fall fc:l intr. [past participle fallen; preterit fell] descend from a higher to a lower position or level; drop thru the working of gravity or the application of artificial impulse or power; come down; settle; sink.

fall calm, become calm; cease to blow, as the wind. fall-cloud 'fc:1,kzavd n. stratus cloud; cloud of night.

falling-star 'fc:-lin.sta:z n. a shooting-star: a meteor.

fall-mantle 'fc:1, mæntl n. same meaning as parachute-cloak. fan-blade 'fæn.bleed n. one of the blades or vanes of a fan

or fan-wheel.

fan-blast 'fæn,bla:st n. a fanning-apparatus, fan-wheel, blower, or bellows proposed for use in airships as a means of creating a blast or strong current of air for propulsion; a fan-blower; a fan-propeller.

fan-blower 'fæn,bloo-oz n. an air-blower workt by fans or

blades; a fan-blast; a fan-propeller.

fanner 'fænəz n. a device, such as a blade, vane, or paddle,

for fanning or blowing air.

fanning-distance 'fænin, distas n. the distance at which a flying-machine begins to fan, or throw out perceptible air-currents against, a neighboring object, as the ground.

fan-propeller 'fæn-pso,pelez n. a propeller which works by means of fans, fanners, or vanes, which, by their rotary or other motion create a blast or strong current of air used for propulsiv or experimental purposes; a fan-blast.

fan-wheel 'fæn, will n. a wheel-like or rotary blowing-apparatus having fans or vanes; a fan-propeller; a sail-wheel.

fast-falling 'fa:st,fc:-lin adj. falling or descending fast or rapidly, as an aeroplane; swiftly-falling.

fast-flying 'fa:st,frai-in adj. flying fast or rapidly; swiftly flying: as, a *fast-flying aeroplane.

fata Morgana ,fa:-to-mez'ga:-no n. a kind of mirage, most

frequently seen in the Straits of Messina.

feather 'fedez n. [also spelt fether] one of the epidermal appendages which together constitute the plumage, the peculiar covering of birds, consisting typically of a main stem or shaft fringed on either side with a vane or web; (in the plural, collectivly) the plumage.

axillary feathers, the innermost of the under coverts

fethers of a bird's wing, lying in the axilla or arm-pit, close to the bedy.

feather 'fedez v. [also spelt fether]

1. tr. furnish with fethers.

2. intr. move. wave. or float like fethers.

3. turn (an oar or blade), at a certain point in the stroke,

so that it may pass thru the fluid edgeways.

feather-border 'fedez,bo:z-dez n. [also spelt fethersborder] that part of the border or margin of a bird's wing which is beset or fringed with, or made up of, fethers; the border or outline of the fethers (collectivly) of a bird's wing.

featherdom 'fedez-dem n. [also spelt fetherdom] the relm

of fetherd creatures; the fethery kingdom.

feathered 'fedozd adj. [also spelt fetherd] provided with or having fethers: as, the *fetherd tribe; *fetherd Mercury.

feather-follicle 'fedez.feli-kel n. [also spelt fether-follicle] one of the fellicles or little pits in a bird's skin which supports the base of the fetherspapilla upon which the future fether is molded or generated.

feather-germ 'fedoz,d3B:zm n. [also spelt fether-germ] the germ from which a bird's fether develops; the papilla,

feathering 'fedo-zin n. [also spelt fethering] the action of the verb feather; also, the fether, as of an arrow; the fethers collectivly; the plumage; fether-like structure.

feathering 'feda-zin adi. [also spelt fethering] feathering movement, see feathering-movement.

feathering-movement 'fedəzin, muuv-mənt n, [also spelt fethering=movement] a mode of wing=movement resembling the movement of an oar which is being 'fetherd' or turnd at the end of the stroke and brought back thru the air edgewise: a movement characterized by an alternately flatwise and edgewise turning of the vanes, wings, or blades.

feathering-paddle 'fedezin.pædl n. Talso spelt fetherings paddle] one of the paddles or vanes, in a rotary or other apparatus, which have a fethering or alternately flatwise and edgewise motion, proposed for propelling or lifting

flyingsmachines; a fetheringsvane.

feathering-vane 'fedəzin, veen n. [also spelt fetherings vane] one of the vanes or blades in a propelling-wheel proposed for airships, designed to move in a manner somewhat akin to the fethering-movement of oars; a fetheringpaddle.

featherless 'fedez-les adi. [also spelt fetherless] having no fethers; destitute of fethers; without plumage.

feather-like 'fedez,lark adj. [also spelt fether-like] like or resembling a fether.

feather-papilla 'fedəz-pə,pilə n. [also spelt fether-papilla; ploral feather-papillae] one of the little papillae or conical elevations, whose bases rest one on each of the fethers follicles of a bird's skin, and from each of which a fether is molded or generated; a fether-germ.

feather-tract 'fedoz,trækt n. [also spelt fetherstract] one of the definit tracts or areas of the skin of a bird where

fethers grow; pteryla.

feathery 'fedo-zi adj. [also spelt fethery]

1. clothed with fethers; fetherd; of fetherd creatures or birds: as, *fethery society.

feathery kingdom, the kingdom of fetherd creatures; the

bird kingdom; fetherdom; birdland.

2. resembling fethers or plumes in appearance or lightness; fetherslike; plumeslike; also, fringed, tipt, or fleckt with something fetherslike.

fill fil tr. inflate (a gasbag or envelop) with gas.

filoplume 'fai-la,proum n. a thredslike or hairslike fether; a thredfether.

fin fin n.

1. an organ attacht to any one of various parts of the body of a fish or whale, which servs for steering or propelling in the water; also, a similar organ in other animals, as the flipper of a seal, the modified wing of a pigeon, etc.

2. any relatively small aerofoil or plane which resembles the fin of a fish or other animal, such as a vertical tails

piece; a vertical stabilizing-rudder.

directive fin, a fin whose function is purely directiv, as the fether of an arrow: distinguisht from abutmentsfin.

following fin, a fin which follows, or trails along at the after end of an advancing air craft; a rear fin: distinguisht from leading fin.

leading fin, a fin which leads or occupies a position in the forward port of an advancing air-craft; a front fin:

distinguisht from following fin.

fin-area 'fin, e:-zi-a n. the area of a fin or fin-like aerofoil or port, in aerodynamic apparatus.

fin-center 'fin, senter n. the center of a fin or fin-like part. finishing-line finishing n. the line or limit set for finishing or completing an airship-race.

finishing-point 'finisin, point n. the point or spot set for finishing or completing an airship-race; the point at which the finishing-mark of a race is located: the opposit of starting-point.

finish-mark 'finis, ma:zk n. the mark or sign placed at the

spot or line at which an airship-race is to be brought to a finish or ended; a stop-signal at the end of a race-course.

fin-kite 'fin,kait n. a kite consisting of a plane, to the lower part of which is affixt at right angles a 'fin' or keel.

fin-like 'fin.laik adj. resembling a fish's fin in shape or

function; flipper-like: as, a *fin-like wing.

fin-plan 'fin,plan n. the plan or plansform of a fin.

fin-tail 'fin,teel n. a tail, in an air-craft, consisting of a combination of fin-like ports.

fireball 'faz,bc: 1 n.

1. a large shooting star or meteor having the form and appearance of a ball or globe of fire; a large globe shaped luminous aerolite.

2. globe-lightning; an electrical fenomenon sometimes seen in thunder-storms, resembling a luminous or red-hot firy ball or globe falling from the clouds and often bursting with a loud report; ball lightning.

fire-balloon 'faiz-baloun n.

1. a balloon beneath and attacht to which is a fire by which the air containd in the balloon is heated and rarefied, thus causing the balloon to ascend or rise; a hot air balloon.

2. a balloon sent up at night with fireworks, which

ignite at a regulated height.

fish-kite 'fis, kuit n. a fish-shaped Chinese kite thru which the wind blows from hed to tail keeping it afloat at a low angle, often attacht to a pole on house-tops.

fish-shaped 'fis, seept adj. having the shape or form of a

fish: as, a *fish-shaped air-craft.

flaceid 'fræksid adj. slack, portly empty, or limp, as the envelop of a portly deflated balloon.

flac-signal 'fræq.signi n. a signal or sign made by means

lag-signal 'ilæg, signi n. a signal or sign made by means of a flag or flags, as to a parachute jumper.

flame-proof 'freem, pounf adj. proof against flame or fire, as the enveloped of some fire balloons.

flap fræp n.

1. the motion of something broad and flat, on or as if on a hinge; a reciprocating motion, as of a bird's wing.

2. a broad, flat, and often somewhat loose part designed to hang or work on, or as on, a hinge; a wing-like vane or aerofoil, as on a kite.

flap fræp v.

1. tr. move up and down, as a wing; beat; sway.

2. intr. beat the wings; make movements like wingsbeats; move up and down; beat; also, progress, as a bird does, by flapping the wings: as, to *flap along on the water.

flapper 'flæpez n. a sustaining structure or other broad flat part which flaps after the manner of a wing; a flap.

flapping 'flæpin n. the action of swaying or working to and fro or up and down the wings, etc.

flaw frc: n.

1. a sudden burst or squall of wind; a sudden blast or qust, usually of short duration.

2. a fall of rain or snow accompanied by gusty winds; a

short spell of rough wether.

flaw fic: tr. blow in gusts: used of the wind.

fledge freds v.

1. intr. acquire fethers large enough for flight.

2. tr. bring up (a young bird) until its fethers are grown and it is able to fly.

3. tr. furnish with plumage; wing for flight; fether.

fledgling 'fled3lin n. [also spelt fledgeling] a young bird just fledged; a nevis in aviation;; a raw or inexperienced aviator; a tenderwing.

flew frou v. see fly.

flex freks tr. bend.

flexion 'firekson n. [also spelt flection] the action of bending or flexing; flexure; curvature; also, bent condition, or an instance of this.

flexor 'freksəz n. a muscle whose function is to produce flexion or bending; a flector: the opposit of extensor.

flexure 'freksoz n. the action of bending; flexion; curvature; also, flext or bent condition, as of a wing or aerofoil; the form or direction in which anything is bent; curvature, bend: as, parabelic *flexure.

flexure of wing, the bend of the wing (of a bird); the

corpal angle.

flier 'frai-əz n. see flyer.

flight frait n.

1. the action, fact, or mode of flying or moving thru the air with or as with wings; volitation, volation; also, the power to fly; the ort of flying ortificially; aviation.

active flight, that type of flight in which the aerofoil is

Itself activ or mobile; flapping flight.

aerial flight, flight in or thru the air or atmosfere;

especially, ortificial flight; manflight; aviation.

aeroplane flight, flight which is characteristic of the type of flying-machine known as an aeroplane; the mode of flight exhibited by aeroplane flying-machines: as, a demonstration of *aeroplane flight. compare aeroplanesflight.

angle of flight, the angle or inclination of the sustainingsurfaces or the longitudinal axis of an airship or flyer in

flight, to the line of the direction of its course or to the

artificial flight, flight by artificial means, or by machines or apparatus artificially designed or constructed; mechanical flight; manflight; aviation: distinguisht from natural flight.

axis of flight, the axis, line, or course along which flight proceeds; the line passing thru the center of gravity of a flyer and extending in the direction of its motion thru the

air.

bounding flight, same meaning as leaping flight.

dynamic flight, flight by means of power-driven flying-

machines; power flight; mechanical flight.

flapping flight, flight in which the wings or other aerofoils are flapt or moved up and down. compare soaring

flight, rowing flight.

free flight, flight or flying which is unhinderd by artificial or outside restgaint of any kind, unaided by support, and unattacht to the earth; flight in which the bird or flying-machine is aloft and completely at liberty to pursue its course; unimpeded flight.

hovering flight, a mode of soaring flight in which the bird or flyer hovers or remains suspended over or about a particular place or spot; stationary flight; hovering.

leaping flight, flight characterized by movements resem-

bling leaps or bounds; bounding flight.

line of flight, the line or direction in which flight takes place; the course or route along which a flyer moves thru the air; the flight-path. compare axis of flight.

mechanical flight, artificial flight accomplisht by mechanical means; flight of man in powersdriven machines.

natural flight, flight, such as that of birds, insects, etc., by natural means; the power of flying by means of wings or other organic structures: distinguisht from artificial flight.

of the same flight, having the same power, mode, or capacity of flight: said of arrows of equal size and weight.

orthogonal flight, see under orthogonal.

power flight, flight by means of artificial motor power; human flight in powersdriven machines; dynamic flight.

rowing flight, flight characterized by a rowing-movement or regular or rithmic flapping-motion of the wings; a mode of flapping flight.

sailing flight, flight in which the bird or flyer sails on the wind, or soars or floats on air-currents; soaring flight.

skimming flight, flight characterized by skimming, soar-

soaring flight, flight in which the bird or flyer soars, floats, or sails on the air-currents or wind, support and propulsion sometimes being furnisht by the air alone without any expenditure of power by the soarer; sailing flight. compare flabbing flight.

stationary flight, flight, or suspension in air, in which the bird or flyer remains stationary, or hangs suspended over or about a particular spot or place; flight in which the flyer

is stationary or has no translatory motion; hovering.

subaqueous flight, flight in the water, beneath the surface, as of certain birds.

sustained flight, flight which is sustaind, maintaind, or kept up continuously for a long time, or for a considerable time, without alighting or falling to the earth.

take flight, begin flight; start off flying or in flight; take

wing: as, *take flight for home.

time of flight, the length of time occupied by a flight; duration of actual flight, during an experiment with a flyer. whistling flight, flight accompanied by a whistling sound. as that of a duck or pigeon.

2. an instance of such action or mode of action; an act of flying; a balloon-flight; an airship-flight; an aeroplane-

flight; a monoplane-flight.

top of a flight, the top, or highest point or part, of a flight; the topmost point, or place of greatest elevation. reacht in the course of a single flight.

3. the distance a bird can or does fly without alighting:

as, a dovecet distant a *flight or two from water.

4. a collection or fleck of birds, insects, or things flying or passing thru the air together: as, large *flights of white clouds.

flight-datum 'flat, dee-tom n. [ploral flight-data] a datum,

or given or granted fact, regarding flight.

flight-feather 'flait, fedez n. [also spelt flight-fether] one of the wing-fethers on which a bird depends for its power of flight; a flyingsfether.

flightless 'frait-les adj. incapable of flight.

flight-muscle 'flat, masal n. one of the muscles used in flight; a wingsmuscle.

flight-path 'frant, pa:0 n. the path of flight of a bird or flyer; the course of flight: as, the equation of the *flightspath.

flight-record 'frait, zekozd n. a record of a flight, as at an aviation-meet; the best recorded achievement as to speed. distance, endurance, height, etc., of a flying-machine or of an aviator; a flying-record.

flight-resistance 'frait-zi, zistns n. the resistance which the

air offers to the flight of a bird or air-craft; resistance to flight.

flight-signal 'frait, signal n. a signal, such as a flag of special design, indicating that a flight is to take place.

flight-velocity 'frait-villesi-ti n, the velocity or speed of

flight.

flipper 'fripez n. a flattish lim used to swim with, as any of the lims of a turtle, the forelim of a seal, walrus, or whale; the fin of a fish; the wing of a penguin; also, a flipper= like or finelike part of a flying-machine; an aileron.

float fixet n. any device, such as an inflated air bag, caisson, or pentoon, which is attacht to or bilt into an aeroplane or other airsmachine to keep it afloat upon waters

surfaces.

float facot intr. rest on or in the air or other fluid; be buoyd up; move gently along on air-currents; soar; sail.

floatage 'fino-tida n. [also spelt flotage] the action or state of floating; also, the power or capacity to float; floatings power: buevancy.

floater 'froo-tez n. one who or that which floats.

floating-appliance 'flootin-a, plai-ans n. an appliance or device for enabling an air-machine to float upon watersurfaces; a float; a water=foot.

floating-power 'fino-tin, pau-oz n. power to float; capacity

to remain suspended or affoat in the air: floatage.

float-reservoir 'floot.zezəz-voz n. a reservoir or receptacle on which the floatingspower of a balloon or airship depends; the float-vessel; the gas-vessel.

float-vessel 'froot, vessel n. the vessel or receptacle upon the bueyancy of which depends the power of a balloon or airship to float in the air; the float-reservoir; the gas-vessel; the gashag.

flock flok n. a band or assemblage of birds or the like: as, a *flock of aeroplanes.

floe faco n. a sheet of ice floating upon the surface of the sea; a detacht portion of a field of floating ice; an ice-floe. floeberg 'fico,be:zq n. [also spelt floesberg] a berg com-

posed of floe-ice.

floe-ice 'faco, sis n. the ice of a floe; the frozen substance of an ice=floe.

flow fact on the action or fact of flowing; movement in a current or stream; also, an instance or mode of this.

discontinuous flow, flow which is not continuous. line of flow, an imaginary line or curv drawn within a fluid at any instant such that at each point of the curv the instantaneous velocity of the liquid is along the tangent.

streamline flow, the flow of fluids in or along streamlines or paths of continuous motion of particles.

tube of flow, an imaginary tube bounded by surfaces across which there is no flow or streaming of the particles of a fluid.

flow-line 'fzoo,lain n. a line of flow. see under flow.

flown from v. see fly.

flow-system 'froo,sistim n. a system of flow, such as streamline flow.

fluke frouk n. an unexpected stroke.

a fluke of wind, a chance breeze.

fluky 'frou-ki adj. [also spelt flukey] of the nature of a fluke or chance; uncertain: as, a *fluky wind.

flurry 'flbzi n. [ploral flurries]

1. a gust or squall; also, a sudden shower: as, a *flurry of snow or rain.

2. a sudden rush (of birds).

flush fras n. a flight of birds suddenly started up.

flutter 'flatez intr. move or flap the wings rapidly without flying much, as a bird; hang upon wing in the air; also, move with a light quivering motion thru the air, as a leaf.

fly flai v. [past participle flown; indicativ present flies;

preterit flew]

1. intr. move thru the air with or as with wings.

2. intr. pass or rise quickly in or thru the air.

3. tr. cause to rise and maintain its position or move in the air: as, to *fly a kite, *fly a balloon, *fly a machine.

4. tr. fly in or thru: as, to *fly the airs; a device for *flying the air.

fly flai n. [ploral flies]

1. (obsolete) the action or fact of flying; flight (sense 1).

2. an instance of such action: as, it was an easy *fly.

flyabout 'frai-a, bout n. a vehicle for flying about; an aerial

runabout.

flyaway 'frai-ə,wee n. [also spelt flyaway] one who flies

away. [1281-5, wee n. [also spelt flyzaway] one who flies

flyaway 'frai-a, wee n. an easy or overwhelming victory, in a flying-contest; an aerial walkover.

flyer 'frai-oz n. [also spelt flier]

1. a person or an animal that flies; a flying-man or a flying animal.

2. a device such as a vane or wing, forming part of a flying-machine or airship and designed to aid in flight: as, a rotary *flyer for moving a gas-vessel; wheels, pullies, and different *flyers.

3. an apparatus or machine which is designed to fly;

a machine for navigating the air; an airship; a flyings machine; an aeroplane; a kite.

4. one skild in flying kites; a kitesflyer: as, expert

*flvers.

flying 'frai-in adi.

1. that moves thru the air with wings, or as with wings; that flies or is flying: as, the highest *flying bird or machine: *flying game; crawling, creeping, and *flying things.

2. capable of flying or of simulating flight; characterized by habitually flying, or by making flying leaps thru the air: as, a *flying quadroped, a *flying animal, a *flying

reptil, a *flying bird.

3. like or simulating flight: as, a morsupial capable of

making a *flying leap.

4. characterized by human flight; of artificial or mechan-

ical flight; of manflight: as, the *flying age.

flying 'flai-in n, the action of moving thru the air with or as with wings; the ort, occupation, or sport of aerial flight; aviation.

flying principle, the principle which underlies flying, in the stricter sense; the hevier-than-air idea; the bird principle: distinguisht from balloon principle.

flying-apparatus 'flai-in-æpə,zee-təs n.

1. the apparatus or organs which enable an animal to fly, or to simulate flight.

2. an apparatus or machine designed to fly in the air; a

flyingsmachine; a flyer.

flying-attitude 'frai-in, æti-tçud n. the attitude, posture, or angle of incidence of an aerofoil of a flying-machine while in flight: distinguisht from ground attitude, see under attitude

flying-car 'frai-in,ka:z n. a car or vessel designed to fly in

the air; an aerial vehicle; an aerocor: an airship.

flying-cat 'frai-in,kæt n.

1. a flyingslemur.

2. the taguan or a species of the rodent genus Pteromys; a flyingsmormot; a flyingsquirrel.

flying-course 'flai-m,kozs n. a course, track, or ground where flyers are tested or flown; an aviation-course.

flying-device 'frai-in-di'vais n. a device or apparatus for accomplishing artificial flight; a flying-apparatus; a flyingmachine.

flying-dog 'fasi-in,do:g n. a kind of vampiresbat.

flying-dragon 'fiai-in'drægen n. a lizard of the genus Draco, having a large frill on each side of the body consisting of skin stretcht over six elongated hinder ribs, which like a parachute sustain the creature in the air for a few moments; the dragon; a flying-lizard.

flying-engine 'frai-in endain n. [also spelt flying-engin] 1. an engin or dynamic apparatus designed for artificial

flight: a flyingsapparatus: a flyingsmachine.

2. an engin or motory apparatus designed for use in flying-machines; an aerial engin or motor; the power-plant

flying-event 'flai-in-i, vent n. one of the events, contests, or single proceedings in a flying-meet; a flying-contest.

flying-exercise 'frai-in, eksəz-saiz n. an exercise in flying or gliding; a flyingsexperiment.

flying-experiment 'flai-in-ik.spezi-ment n. an experi-

ment in flying; a flyingsexercise.

flying-feat 'flai-in, frit n. a feat or exploit in flying; a skilful or extraordinary performance in the art of flight.

flying-feather 'frai-in, feder n. [also spelt flying-fether] same meaning as flight=feather.

flying-fever 'frai-in,fii-vəz n, a fever or grdor for flying or air sailing; an intense desire to fly.

flying-fish 'frai-in,fis n. any fish which can sustain itself or fly thru the air (by means of large wing-like pectoral fins), especially a fish of the family Exocoetus; a volator.

flying-fox 'frai-in, foks n. a large frogiverous bat whose hed resembles that of a fex; any bat of the family Pteropopidae; a fox-bat; a fruit-bat; a kalong.

flying-frog 'frai-in, frog n. a batrachian of Borneo, of the genus Rhacoforus, family Ranidae, whose long webd toes

enable it to take flying leaps thru the air.

flying-gecko 'flai-in,geko n. a kind of gecko lizard, Ptychozoon homalocefalum, which has large wing-like expansions of skin on the hed, trunk, tail, and lims acting as a parachute to sustain the animal during flying leaps.

flying-ground 'fisi-in, ground n. [commonly used in the ploral] a ground, field, or course where airships or flyers are tested or flown; an aviation-ground; an aviation-field.

flying-gurnard 'flai-in, geznezd n. a flyingsfish of the family Cefalacanthidae or Dactylopteridae; a flying-robin; a bat=fish.

flying-homer 'frai-in, hoo-moz n. a homing-pigeon raised

flying-instructor 'flai-in-in, straktez n. an instructor in the art of flying; a teacher of manflight.

flying-lemur 'frai-in,lii-məz n. an insectivorous mammal of the family Galeopithecidae, resembling a lemur, provided with a parachuteslike extension of the skin by which it is enabled to make flying leaps from tree to tree; a flying cat, colugo, kaguan, or kubeng.

flying-limb 'frai-in, him n. [also spelt flying-lim] a lim or member of an animal's body, used in flying.

flying-line 'frai-m, lain n. a line attacht to a kite and used

to fly it with; a kite-line; a kite-string.

flying-lizard 'fiai-in,lizəzd n. any lizard of the genus

Draco, as Draco volans, capable of a short parachute-like

leap; a flying dragon.

flying-machine 'frai-in-ma, in n. a machine or apparatus designed to fly thru the air, or to enable its user to do so:

an aerodrome; a hevier-than-air airship; a flyer.

flying-man 'flui-in, mæn n. [ploral flying-men] a man who, by the aid of ortrficial devices, flies or sails in the air; a man-bird; an aviator.

flying-marmot 'fiai-in, ma:z-mət n. a taguan or large fly-

ing squirrel of the genus Pteromys.

flying-meet 'frai-in, mit n. a meet or meeting at which flying is carried on, or flyers tested or flown; a flying-meeting; an aviation-meet; an aero-meet.

flying-meeting 'frai-in, mii-tin n. a meeting or meet at which flying is carried on, or flyers tested or flown; a

flying-meet; an aviation-meeting.

flying-membrane 'flai-in, mem-been n. a membrane or fold of skin used by some animals in flying or in simulating flight; a patagium.

flying-model 'frai-in, mod! n. a model flyer for experi-

menting purposes; a miniature flying-machine.

flying-opossum 'flai-in-o,pesəm n. a kind of opessum

capable of simulating flight.

flying-phalanger 'fini-in-fo, kendzoz n. [also spelt flyings falanger] any one of the petaurists or flying marsupials of the family Falangistidae, having a parachute-like fold of skin along the sides, by which they are enabled to take flying leaps thru the air; a flying-squirrel; the acrobat.

flying-plane 'flai-in,pleen n.

1. an aeroplane or aerofeil designed to fly or glide thru the air.

2. an aeroplane flyrng-machine; a aerodrome; an aerodone; an aerodyne; a flyer.

flying-ram 'flai-in,zem n. a fancied aerial warscraft recalling or named after the ram; an aerial batteringsram.

flying-record 'frai-19,zekəzd n. same meaning as flight: record.

flying-robin 'frai-in, zobin n. the flying-gurnard; the batfish. flying-sail 'frai-in, seel n. a flying-apparatus or glider with sail-like wings; an air-sailing machine; a glider.

flying-school 'frai-in, skoul n. a school where flying is

taught or studied; an aviation-school.

flying-screw 'fini-in,sksou n. a model flying-machine designed by Pénaud in 1870, using two superposed screw propellers rotating in opposit directions; a helicopter.

flying-ship 'frai-in, sip n. a ship or vessel designed to fly

thru the air; a flying-machine; an airship; a flyer.

flying-space 'frai-in, spees n. a space or area of ground where airships or flyers are tested or flown; a flying-field; an aviation-ground.

flying-squid 'frai-in, skwid n. a sagittated calamary or seasarrow; a cefaloped or squid of the genus Ommastrefes, haveing two large lateral fins by which it is enabled to lead

high out of the water.

flying-squirrel 'frai-in, skwbzəl n. a squirrel-like anımal having a parachute-like fold of the skin on each side of the body by which it is enabled to make flying leaps thru the air.

American flying=squirrel, sciuropterus volucella.

flying-string 'frai-in, strin n. the string attacht to a kite, by which it is flown; a flying-line; a kite-string; a kite-

flying-surface 'flai-in, spzfis n. the surface of the aerofeils used in a flying-machine for the purpose of flying; sustaining-surface; supporting-surface.

flying-time 'frai-in,taim n.

1. the time when a hawk or falcon is in condition to be flown.

2. the time consumed in flying over a definit course or the like; the period of time occupied by a flight: as, the total *flying-time was fifteen minutes.

flying-twine 'frai-in, twoin n. the twine or cord attacht to a kite, by which it is flown; a flying-string; a kite-string.

flying-weather 'frai-in, weder n. [also spelt flying-wether] whether or atmosferic conditions considerd in relation to suitability for artificial flying; wether as adapted to making flights.

fly-line 'frankam n. the line or route of flight followd or

taken by a bird in its regular migrations.

fly-off first, o: f n. that part of the rainfall or precipitation upon a land surface which is evaporated or flies off again into the atmosfere: distinguisht from runzoff.

fog fog n. thick mist or visible watery vapor suspended in the atmosfere at or near the earth's surface, usually due to

the cooling of the air below the dewspoint and consequent condensation of its watersvapor; an obscured condition of the atmosfere due to the presence of condenst watersvapor: as, an arctic *fog.

barometric fog, a fog due to a lowering of barometric pressure and the consequent expansion and cooling of the

air and condensation of water-vapor.

drifting fog, fog-like cloud which, when in the form of a horizontal stratum, is cald stratus.

dry fog

I. a light fog (consisting of very fine particles of water) which does not wet objects with which it comes in contact. compare wetting fog.

2. a haze due to the presence of dust, soot, or ashes,

as from a prairie fire.

electric fog, a fog accompanied by electrical fenomena

such as Saint Elmo's fire or ball-lightning.

radiation fog, a feg due to the cooling of the air consequent upon the radiation of its heat toward the colder earth below or sky above.

red fog, a fog or fogslike cloud of reddish hue, made up of dustsparticles, often seen off the northern part of the

west coast of Africa.

wetting fog, a fog (composed of water-particles) which wets objects with which it comes in contact. compare dry fog.

wooly fog, a fog of wool-like appearance which moves slowly over the lower slopes of mountains in the night-

time.

fog-alarm 'fog-a,la:zm n. an alarm, or signal by sound from a bell, gun, horn, or whistle, used in foggy wether, to indi-

cate the presence of rocks, lighthouses, or ships.

fog-bank 'fog,bænk n. a bank or wallslike mass or stratum of fog as seen from a distance; also, sperfreally, a foggy or hazy appearance at sea, often taken for land, but vanishing as it is approacht; Cape Flysaway; Nosman's Land; Dutchman's Land.

fog-bell 'fog,bel n. a bell rung as a fog-signal.

fog-billow 'fog,bilo n. a billow or great surging wave of fog, observed by looking downward, as from a balloon, upon fog which is being acted upon by a gentle wind; a big fogwave.

fog-bound 'fog,bound adj. bound, impeded, detaind, embars

rast, or confined by fog, as a ship at sea.

fogbow 'feg,boo n. a bow or arch of light five degrees wide, slightly rosy on the outside, seen in a feg, and faintly re-

sembling a rainbow and due to similar causes, the globules of water of the fog playing the same port as the rains drops.

fog-buoy 'fog,buu-i n. a buoy kept floating on a water-surface over which fog is apt to occur, as near a shoal.

fog-dog 'fog,do:g n. a break or clearing spot in a fog-bank,

presaging the lifting of the fog.

fog-drip fog,drip n. the drip or dropping water from solid bodies upon which fog-particles have collected and run together.

fog-eater 'fog, ii-təz n. a break ın a fog bank or mıst, presagıng clearing wether; a fog dog; also, a fog bow.

fogged fogd adj. coverd with fog; misty.

fogginess 'fogi-nis n. the state of being foggy.

fog-gun 'fog,gan n. a gun fired in foggy wether as a warning or fog-signal.

foggy 'fogi adj, abounding with fog; damp with fog; misty.
fog-horn 'fog,ho:zn n. a horn sounded as a warning or a
signal in foggy wether: as, the siren *fogzhorn.

fogless 'fogles adj. without fog: clear.

fog-ring 'feg,zin n. a ring or circular bank or mass of feg, not unusual off the Newfoundland coast.

fog-scale 'fog, skeel n. a scale of fog = intensities; a graded system by which degrees of fogginess may be exprest; a system of grades for describing how thick the fog is.

fog-signal 'fog, sign! n. a signal such as the sound of a horn, whistle, or torpedo, made in foggy wether as a warn-

ing of danger; a fogsalurm.

Edem fog-signal, a signal for use in foggy or thick wether to determin the direction of approaching sounds waves.

fog-wave 'fog, weev n. a wave of fog; a fog-billow.

föhn fs:n n. a warm dry south or southwest wind which descends from the upper Alps into the valleys on the north side of the chain of Alps; also, a similar wind elsewhere, as on the west coast of Greenland and in New Zealand; a föhn-wind.

föhn-wind 'fB:n, wind n. same meaning as föhn.

fold foold tr. double over on itself; lay or bring one part

(of a balloon, etc.) over onto another by bending.

footpound 'fot, pound n. the amount of energy required, at any given place or altitude, to raise a weight of one pound, against gravity, a height of one foot: a unit of energy, or work.

foot-rest 'fot,zest n. a red, bor, or the like, as in a biplane, en which the aviator rests his feet during flight. fore for adi, situated at the fore or forward part: front: forward.

fore for adv. (of place) before; in or toward the front part; toward the bow: forward: opposed to aft.

fore-and-aft ,fo:z-on'a:ft adj. of or related to the fore and after part of an airship considerd together: longitudinal.

fore-and-aft stability, see under stability.

forecast 'fo:z.ka:st n. a forecasting or anticipatory estimate of the wether; an estimate of the expected wether; a publisht statement of wether-probabilities; wether-profecy; a wether forecast.

forecast district, a district or definit region for which a

wether forecast is made.

long=range forecast, a wether=forecast made at long range: an estimate of wether-conditions to be lookt for at some distant date, as a week, a month, or a year ahed.

seasonal forecast, a wether-forecast for a coming season; a statement of probabilities as to average rainfall, temperature, and wind for an approaching season: as, a *seasonal forecast of mensoon rains.

forecast ,foz'ka:st tr. consider or calculate beforehand; fore-

tell: as. *forecast the wether.

forecast-division 'fo:z-ka:st-di,vi3on n. a governmental division or section connected with the Wether-Bureau, whose duty is to forecast the wether.

forecaster ,fo:z'ka:-stəz n. one skild in forecasting or fore-

telling the wether: a wether forecaster. fore-end 'forzend n, the end, as of an airship, which is

foreward, or toward the bow; the front end. foreglow 'fo:z.gloo n. a glow seen in the east before sunrise.

compare afterglow.

forepart 'fo:z,pa:zt n. the fore, front, or forward part, as of an airship.

foretell ,foz'tel tr. tell or estimate beforehand; forecast: as,

to *fortell the wether.

fore-wing 'fo:z,win n. [also spelt fore wing] one of the front upper wings of an insect which has two pairs of wings; an anterior wing; a mesothoracic wing; a superior wing; as, the *fore-wing of a butterfly: ditinguisht from hind-wing.

founder 'foun-daz intr. fall helplessly to the ground; break down; be wreckt; collapse; as, when an airship *founders.

fracto-cumulus .fsækto'kcumio-les n. [ploral fracto-cumuli] ragged cumulus; rrregular fragments or patches of low cloud torn from, or floating below, the flat base of ordinary cumulus cloud.

fracto-nimbus ,fsækto'nimbes n. [ploral fracto-nimbi] rag-

ged nimbus; irregular fragments or patches of cloud torn from, or floating below, a nimbus or rainscloud; scud.

fracto-stratus ,fsækto'stree-tos n. [ploral fracto-strati] 11-

regular fragments or edges of stratus cloud.

frame freem n. a structure which servs as a support or skeleton; the rigid main part of an airship or flyer, to which other parts, such as the motor and passenger-accommodations, are attacht; the framework.

frame-member 'fseem, member n. one of the members or

parts of the frame of a kite; a frame-stick.

frame-stick 'fseem, stik n. one of the sticks or rods forming the frame of a kite: a frame-member.

framework 'fseem,we:zk n. a structure which constitutes a frame or rigid portion in an airship, flyer, or kite; the frame.

freedom 'fsii-dom n. the property of being free to move in a translatory or rotary manner in one or more directions or about one or more axes; capacity for unrestraind flight or aerial movement: as, the degrees of *freedom of an aerodone.

free-flight 'fsni, Lant adj. characterized by free flight; related to unrestgaind or unhinderd flight; as, *free-flight models; the *free-flight method of experiment. see under flight.

freshen 'fseson intr. become fresher or stronger; increase in

velocity: as, the breeze *freshens.

friction 'fsikson n. the resistance which any body meets with

in moving over the surface of another.

internal friction of a fluid, the friction inside of a mass of fluid due to the relativ motions of the particles; viscosity.

skin friction, see skin-friction.

friction-plane 'fsikson, pleen n. an aeroplane or plane aerofoil used in determining the skin-friction generated by the motion of an aerofoil thru the air.

frontage 'fsantid3 n. the spred, or tip-to-tip width (of an

aeroplane or flyer).

frost fse:st n.

1. the act or state of freezing or becoming frozen; the temperature of the atmosfere when below the freezing-point of water.

black frost, frost not accompanied by hoar or rime: drs-

tinguisht from white frost.

2. frozen dew or vapor; hoar; rime; hoarfrost; white frost.

frost-bite 'fso:st,bait n. the inflamed or gangrenous con-

dition of a portion of the skin or flesh produced by ex-

posure to frest or severe cold.

frost-bow 'fze:st,boo n. a bow or halo of white light around the sun in fresty or cold wether, due in some cases to minute water-particles and in other cases to ice-particles.

frost-cloud 'fso:st,kraod n. a cloud whose particles adhere to solid objects as frostwork; a rimescloud; an icescloud

(sense 2).

frost-signal 'fse:st,sign! n. a signal, consisting of a white flag with a black center, for indicating the approach of a frest or of cold wether; a cold-wave signal.

fuel-pump 'fiou-ol,pamp n. a pump for injecting gasoline or other liquid fuel into the engin of an airship; a fuels

miectrng device.

fugoid 'fivu gord adj. see phugoid.

fuselage 'figu-si-lida n, the body or frame of an airship; the hedy-framework of a flying-machine; the body-frame; the underhedy.

gale geel n, a wind of considerable strength; a strong wind; a blast.

fresh gale, a gale (numberd 8 in Beaufort's wind-scale) having a velocity of about 15.4 meters per second.

moderate gale, a gale (numberd 7 in Beaufort's wind= scale) having a velocity of about 12.9 meters per second.

straight-line gale, a long-continued gale which blows in a straight line or course, rother than around a region,

strong gale, a gale (numberd o in Beaufort's wind-scale) having a velocity of about 18 meters per second.

whole gale, a gale (numberd 10 in Beaufort's wind-scale)

having a velocity of about 21 meters per second.

gallery 'gæle-zi n. a balcony or balcony-like car forming a part of a balloon such as the large fire-balloon at Lyons. France, in 1784.

gap gap n. the opening or vacant space between two adjacent aerofoils of an aeroplane flying-machine; the distance between the adjacent planes or supporting surfaces of a biplane or multiplane.

garage gə'za:dz, gə'za:z, 'gæzidz, 'ga:-zidz n. a house or storage-place for airships or flying-machines; an airship-

house; an aeroplane-shed.

garua g3'zou-a n. a hevy fog which prevails from May to October in the rainless area along the coast of Peru up to an altitude of about one hundred feet.

- gasbag 'gæs,bæg n. [also spelt gas>bag] a bag for holding gas; specifically, the bag or receptacle made of silk or other material, and its immediate connections and appurtenances, forming the most conspicuous part of most balloons and dirigibles.
- gas-balloon 'gæs-bə,loun n. a balloon or gasbag which is inflated with gas; a coalsgas balloon; a hydrogensballoon: as, the separate *gassballoons of a Zeppelin airship.
- gas-capacity 'gæs-kə,pæsi-ti n. the capacity of a balloon or airship for receiving or containing gas; holding-power; cubic content.
- gas-chamber 'gæs,tsem-bez n. a chamber or receptacle for holding gas; one of the gas-compartments of a sectional air-ship.

gas-charge 'gas,tsa:zd3 n. the charge or quantity of gas in

the gasbag of a balloon or airship.

gas-compartment 'gæs-kəm,poztmənt n. one of the comportments of the composit gas-receptacles of certain airships; one of the subdivisions of the gas-reservoir of an airship, fild with inflating-gas; a gas-chamber.

gas-condenser 'gæs-kən,densəz n. an apparatus used for

condensing gas; a gas=compressor.

gas-container 'gæs-kən,tee-nəz n. a vessel, receptacle, or bag forming a port of an airship and designed to contain gas; a gas-chamber; a gas-receptacle; a gas-holder.

gas-craft 'gæs,ksa:ft n. pl. craft or aerial vessels depending upon or using gas for sustaining-power; lighter-than-air

craft.

gas-cylinder 'gæs,sılın-dəz n. a strong metal cylinder or cılındırıcal gas-holder used for containing and transporting

inflating=gas in a comprest state; a gas=tube.

gas-engine 'gæs,end3in n. [also spelt gas-engin] an engin or motor in which the motion is obtaind by the alternate admission and condensation (by explosion) of a gas-mixture in a closed cylinder containing a piston; a gas-motor; also, sometimes, a gasoline or petgol engin.

gas-envelop 'gæs,envo-lop n. [also spelt gaszenvelope] the envelop or covering of the gasbag or gaszreceptacle of a

balloon or airship.

gaseous 'gæsi-əs adj. having the nature of gas; in the condition of gas.

gas-filled 'gæs,fild adj. [also spelt gas-fild] fild or inflated with oas: gas-inflated.

gas-float 'gæs,fzoot n. the gas-inflated float or bag of a balloon or airship; the inflated gas-bag of a balloon con-

siderd as the float or buoy which sustains the craft in the air.

gas-generator 'gæs,dʒenə-zetəz n. an apparatus for generating or producing hydrogen gas, as in an airship; a gas-producer.

gas-globe 'gæs,gloob n. a globe-shaped receptacle or balloonenvelop fild with gas; a globular or sferical gas-vessel or gasbag; the sfere of a balloon.

gas-holder 'gæs,hool-dəz n. a vessel for holding or storing gas; also, the gasbag of a balloon.

gas-hose 'gæs,hooz n. a hose or flexible tube for conducting gas.

gas-inflated 'gæs-in,flee-tid adj. inflated or fild with gas; fild with inflatingsgas; gassfild.

gasless 'gæs-les adj. using no gas; not depending on gas for sustainingspower.

gas-meter 'gæs,mii-təz n. [also spelt gas-metre] a meter or apparatus for mesuring the amount of gas consumed or used.

gas-motor 'gæs,moo-tez n. a gassengin.

gasolene 'qæsə.lin n. see gasoline.

gasoline 'gæsə,lin n. [also spelt gasolene] a volatil inflammable liquid, one of the first products in the distillation of crude petgoleum, used in the motors of automobiles and flyers; petgoleum spirit; petgol.

gasoline engine, an internal-combustion engin or motor in which a mixture of gasoline vapor and air furnishes the

power; a gasoline motor; a petrol engin.

gasoline-supply 'gæsə-lin-sə,plai n. supply of gasoline; the quantity of gasoline carried on board an airship or flyer.

gasometer ,gas'emi-təz n. a device for mesuring gas; also, a holder or storehouse for illuminating gas or inflating gas; a gas-holder.

gas-pipe 'gæs,paip n. a pipe for conveying or conducting gas.

gas-plant 'gæs,pla:nt n. a plant or apparatus for generating or making hydrogen or other gas, as for inflating balloons.

gasproofing 'gæs,psou-fin n. the process of rendering gasproof or air-tight; the action of coating or otherwise treating a balloon-envelop so as to prevent the escape of its inflating-gas.

gas-pump 'gæs,pamp n. a pump for compressing gas.

gas-purifier 'gæs,pçozi-fai-əz n. an apparatus used in gas:

works for purifying gas or freeing it from sulfur compounds, as it comes from the gas-washer or scrubber.

gas-reserve 'gæs-zi,zB:zv n. [also spelt gas-reserv] gas kept

ın reserv, as ın a Zeppelin airship.

gas-reservoir 'gæs,zezə-vəz n. a reservoir or receptacle containing gas; the gas-vessel of an airship; a gas-container; a gas-holder.

gas-tight ,gæs'tart, (assumptivly) 'gæs,tart adj. so tight as

to be impermeable to gas.

gas-tube 'gæs,tçoub n. a steel tube or hollow cylindrical receptacle in which inflatings or other gas is comprest and transported; a strong, portable, cylindrical gassholder; a gasscylinder.

gas-valve 'gæs,vælv n. [also spelt gas-valv] a valv or controlling device for regulating the escape or flow of gas.

gas-vessel 'gæs,vesəl n. a vessel or receptacle containing gas or intended for that purpose; a gas-container; specifically, the gasbag or gas-reservoir of a balloon.

gas-washer 'gæs,wejəz n. an apparatus used in gas-works for washing gas or freeing it from ammonia before it goes

to the gas-purifier; a scrubber.

gas-works 'gæs,wb:zks n. an establishment in which illuminating-gas is made and whence it is distributed thru pipes to consumers.

gegenschein 'gee-gən, sin n. the luminous patch on the ecliptic opposit to the sun: also sometimes cald counters

glow

geosphere 'd3ii-9,sfi:z n. [also spelt geosfere] the atmosfere of the earth as distinguisht from that of other planets.

get-away 'getə,wee n. the act of getting away from or leaving the storting point in an airship; the deporture or leaving of an airship from a given location or resting place; a get off; a stort.

get-off 'get,o:f n. the action of an aeroplane flyingsmachine or other airship in getting off, storting, or leaving the

ground; a get away; a stort: as, a quick *get off.

giddiness 'gidi-nis n. the condition of being giddy or dizzy, as at a height; swimming in the hed; vertigo; dizziness.

giddy 'gidi adj.

1. having a confused sensation of swimming or whirling in the hed with proneness to fall; affected with vertigo; dizzy.

2. causing or apt to produce dizziness or swimming in

the hed; rendering giddy or dizzy.

3. whirling or circling round with bewildering rapidity.

glide glaid v. [preterit glided, glode; past participle glided, alid]

1. intr. pass from one place to another by a smooth, continuous, and easy movement; sail or sweep evenly along, as a balloon often does; skin smoothly enward, as in an aeroplane; plane at an easy angle; coast or slide earthward: as, sailing and *qliding birds.

2. tr. cause to glide: as, a breeze *glides the craft quietly

onward.

glide glaid n. the action of gliding; a gliding, skimming, or sliding movement, as of an aeroplane when descending at an easy angle; also, a flight in or of a gliding-machine or glider; a gliding-experiment: as, a trial *glide.

glider 'glar-dəz n.

1. one who or that which glides thru the air.

2. an appendage or structure which enables an insect to glide thru the air: as, elytra used as sustainers and *gliders in flight.

3. an apparatus designed to glide, sail, or soar thru the air or to enable its user to do so; a gliding-machine; a

sailing=machine.

biplane glider, a glider of the biplane type; a gliding-machine having two superposed parallel sustaining-planes or aerofoils.

double:monoplane glider, a glider of the double:mono-

plane type. see under monoplane.

free glider, a glider which is free from, or unattacht to, the earth; a free-sailing or untowd gliding-machine. compare towed glider.

towed glider, a glider which is towd, dragd, or governd

by means of a cord or line. compare free glider.

gliding 'glar-din adj. characterized by smooth, continuous, easy movement or motion; skimming; sailing; soaring: as, *gliding birds, *gliding flight.

gliding 'glai-din n.

1. the action of the verb glide; a gliding or skimming movement.

2. the art, occupation, or sport of those who glide, skim, or sail thru the air or use glidingsmachines or gliders.

gliding-angle 'glar-din, ængol n. the angle at which gliding is done; the inclination of a gliding aeroplane, glider, or aerofoil to the direction of flight or to the horizontal: compare rising-angle.

natural gliding-angle, the angle at which an aeroplane or plane aerofoil naturally continues to glide indefinitly.

compare natural velocity, under velocity.

gliding-apparatus 'glar-din-æpə,zee-təs n. an apparatus for

gliding thru the air; a glider.

gliding-datum 'glar-drn, dee-tom n. [ploral gliding-data] a datum, or given or granted fact, concerning the action of gliding planes or aerofoils.

gliding-effect 'glar-drn-r,fekt n. an effect produced by

gliding; a gliding or skimming movement.

gliding-experiment 'glai-din-ik, spezi-mont n. an experiment with a gliding-machine or glider; a test made with a gliding plane or aerofoil.

glidingly 'diar-din-is adv. in a gliding manner.

gliding-machine 'glar-din-mə, sin n. a machine or apparatus designed for gliding thru the air; an aeroplane, usually without a motor, by means of which, or in which, glides may be made in the air, as from a higher to a lower level; a glider.

gliding-path 'glar-din,pa:0 n. the path or course of a glide; the path or line of motion of a gliding plane, propellers

blade, or other aerofoil.

gliding-plane 'glar-din, preen n. one of the planes or aeroplane surfaces forming part of the gliding or steeringapparatus of a diribible balloon; a governing-plane.

gliding-speed 'glar-drn, sprid n. the speed at which an aerial vehicle glides or is capable of gliding; the speed at

which an aeroplane makes a gliding descent.

gloaming 'gloo-min n. twilight, especially the evening twi-

light; glooming; dusky light; shade, dusk.

globe gloob n. a ball; the sfere or sferrcal gasbag of a balloon.

globo-cirrus ,głoo-bo'szes n. [plural globoscirri] a globular or ball-like cirrus cloud from which fibers or filaments stream downward.

globo-eumulus 'głoo-bo,kçumjo-ləs n. cloud consisting of slightly elongated, hemisferic, grayish masses, appearing in nimbus or rain-cloud.

gloom gloum n. an indefinit degree of darkness; shadowy obscurity.

glooming 'glou-min n. (in poetry) gloaming.

glory 'glo:-zi n. one of the colord circles seen around the shadow of a person's hed on a fog.

diffraction glory, a glory due to diffraction of light, rather than to refraction, etc.

goldbeater 'goold.bri-tez n.

goldbeater's skin, a light, skin-like animal membrane used in beating out gold-leaf, and also, sometimes, for making balloon-envelops.

gondola 'gendo-lo n. a boat-like car of a dirigible balloon.

gore go:z n. one of the many triangular or lune-shaped pieces of silk or other material which together form the envelop of the gasbag of a balloon.

gossamer 'gosə-məz n. a web-like or gauzy fabric or struc-

ture: as, the *gessamer wings of an insect.

gossamer-like 'gossmez,lank adj. like gossamer; web-like, gauzy: as, *gossamer-like construction.

gourd-whistle 'go:zd,wisəl n. a light wind-blown whistle made of tubes fastend to a gourd body or wind-chest, at-

tacht by the Chinese to the tails of flying pigeons.

governing-plane 'gavəznın,pleen n. one of the aeroplanes forming part of a dirigible balloon or airship and used to govern or control the direction or equilibrium of the craft.

gradient 'gzee-di-ent n. a series or system of steps, grades, or degrees; specifically, the rate at which a variable

quantity changes; rate of variation; rate of change.

adiabatic gradient, the vertical gradient of the temperature of any portion of the atmosfere under adiabatic conditions; the rate of change in the temperature of the air (with change of altitude) caused by change of volume and concomitant transformation of internal energy of the air concernd, but not the result of any transference of heat to or from the surrounding air; the rate at which the temperature of the atmosfere varies (as mesured at different heights above the earth) when the variation of its temperature is due solely to expansion or compression of the air resulting from a decrease or an increase in the external air-pressure and the accompanying absorption or evolution of internal heat.

barometric gradient, the gradient of barometric pressure with distance; the rate of change of atmosferic pressure along the surface of the earth, usually mesured (on the wether-map) along a line perpendicular to the isobars at

any point.

critical barometric gradient, the barometric gradient which would be maintaind under stedy wind-conditions; the rate at which atmosferic pressure along the surface of the earth would vary under the influence of a stedy wind

or stedy system of winds.

cyclonal gradient, the barometric gradient directed toward the center of a cyclone; the rate at which the atmosferic pressure along the earth's surface would vary if mesured (on the wether-map) along a line extending from any given point toward the central point of minimum pressure in a rotary system of winds.

electric gradient, the gradient of the electric potential of the atmosfere; the vertical or the horizontal rate of change in the potential function of the electricity in the air.

gradient of refraction, the vertical temperature-gradient at considerable altitudes as affected by fenomena of re-

fraction.

initial gradient, the small gradient of pressure of the air at about seazlevel where the slight variations of pressure due to differences of density of the air, the tides, etc., initiate or give rise to the winds which cause the larger (observed) barometric gradients.

neutral gradient of pressure, a vertical pressure-gradient whose maintainance keeps the atmosfere neutral or in dy-

namic equilibrium.

vertical gradient, the gradient according to vertical height above the earth; the rate at which any atmosferre condition, as temperature or pressure, etc., varies with the altitude.

gradient-formula 'gzee-di-ent,fo:z-mjv-le n.

Ferrel's gradient-formula, a formula expressing the relation between barometric gradient and the accompanying winds.

grading 'gree-din n. the mode in which a propeller-blade or other aerofoil is graded or graduated in outline, contour, or curvature of surface for a definit purpose; the form of curvature or contour which results from this process: as, segmental *grading.

linear grading, the grading of a propeller-blade along the line of its radius. This grading, for any given radius, is the quotient obtaind by dividing the load-value by the

thrust=value.

load grading, the grading of a propeller blade in correlation with the distribution of its load.

thrust grading, the grading of the propeller-blade in cor-

relation with the distribution of its thrust.

grapuel 'grapus' n. a small anchor with three or more flukes, carried in a balloon and used for securing the balloon to earth on its descent; a grappling-iron; a grapple-iron; an anchor.

grapple-hook 'gzæpəł,hok n. a grapnel; a grapplingsiron. grapple-iron 'gzæpəł,ai-əzn n. a grappleshook; a grapplings

iron; a grapnel.

grapple-rope 'gzæpəl,zoop n. the rope to which a grapple is attacht to a balloon; an anchor-rope.

grappling 'græplin n. a grapplingsiron; a grapnel.

grappling-iron 'gzæpzın, si-əzn n. a device made of iron

carried in a balloon and used for grappling the earth in

landing; a grapnel; an anchor.

graveyard 'qzeev,ja:zd n. a portion of an aviation-ground or flying course which has gaind the reputation for being a sort of cemetery or place where, on account of trecherous air-currents, rough ground, etc., the machines are apt to fall and go to smash and their occupants be kild or come to

gravitation 'gzævi,tee-son n. the action or process of gravitating: the tendency which material bodies have of attracting one another, of which gravity, or the fall of bedies to

the earth, is an instance.

gravity 'gravi-ti n. the quality of having weight or of tending downward or toward the earth; the earth-force; also, weight, heviness; also, gravitation.

center of gravity, see under center.

specific gravity, the degree of gravity which specifically characterizes a given material substance or body; the relativ heviness or weight of any particular portion of matter, usually exprest by the ratio of its weight to the weight of an equal volume of water (in the case of solids and liquids) or of hydrogen (in the case of gases).

gravity-correction 'gzæviti-kə,zeksən n. a correction of a reading of a standard mercurial baremeter on account of the variation of the force of gravity at different altitudes and the resulting changes in the pressure of the atmosfere.

gregale gzi'qu:-li n. a dreded northeast wind in the island of Malta and other Mediterranean regions, resembling the

tramontana wind of Italy.

ground ground n. the solid part of the earth's surface; any portion of the land-surface; firm land; also, a tract or region.

ground attitude, see under attitude.

ground-current 'ground, kerent n. an air-current near the the surface of the ground or earth; a current or stream of air due to the influence of the earth or objects thereon upon the motions of the atmosfere.

ground-level 'ground, level n. the level of the ground; the general level of the land-surface in a given locality.

guide-line 'gard,larn n. a line used as a guide-rope on a balloon; a guide rope.

guide-rod 'gaid, zed n. one of the reds used in a flying= model devised by H. Sutton of Australia, about 1888, for guiding or directing the stroke of the wings.

guide-rope 'gaid, zoop n. a long rope attacht to a balloon and allowd to dangle or hang below, so that when the balloon descends too close to the earth or ground surface the rope will, by resting on or dragging along the ground, relieve the balloon of weight, and cause it to rise, thus guiding it automatically or tending to keep it at a uniform distance from the earth; 'the rope'; a drag dope; a balancer.

guiding-plane 'gai-din,pleen n. a plane or aeroplane serving to guide or direct the course of a flying-machine; a

rudder.

gull gal n. any long-wingd, web-footed bird of the family Laridae, such as of the genus Larus; also, popularly, a tern, a skua.

gust gast n. a sudden violent rush or blast of wind.

gust-swept 'gast, swept adj. swept by gusts of wind; fit-

fully windy; windswept; squally.

gusty 'gasti adj. (of wind) blowing in gusts or violent blasts; (of wether) markt by gusts or squalls of wind; fitfully windy or stormy.

guy gai n. [ploral guys] a rope or wire used to guide or stedy any part of a balloon or airship; a guy-rope; a guy-wire.

guy gar tr. fasten with a guy or guys; make secure by means of the guy-rope or guy-wire.

guy-line 'gai, ain n. a line or cord used to guide or stedy

a kite.

guy-rope 'gai,zoop n. a rope used as a guy; a stedying-rope; specifically, one of the ropes extending between the basket or car of a balloon or airship and the netting or envelop above.

guy-wire 'gai, waiz n. one of the wires forming or serving

as a guy or stay in an airship; a stedyingswire.

gyrate 'd3a1,zet, ,d3a1'zeet intr. move in a gyre, circle, spiral, or helix; revolv, usually round a fixt point or on an axis; rotate, whirl, circle, wheel.

gyrating 'dan, zetin, dan'zee-tin n, the action of birds in

soaring in a spiral course; circling,

gyration ,d3ar'zee-[on n. the action or process of gyrating; motion in a circle, spiral, or helix; revolution round a fixt center or axis; turning round, wheeling, whirling; also, an instance of any of these: as, a Helmholtz surface of *gyration.

Dove's law of gyration, same meaning as Dove's law of

the rotation of the winds. see under wind.

gyration in storm areas, the mode of gyration or rotation of the winds in the areas coverd by storms as formulated by Ferrel; the anticlockwise cyclonic movements occurring in the northern hemisfere, and the clockwise cyclonic movements occurring in the southern hemisfere.

gyrator 'dʒaɪ,zetəz, ,dʒaɪ'zee-təz n. he who or that which gyrates or whirls.

gyratory 'd3a1-zə,təzi adj. moving in a gyre, circle, spiral, or helix: revolving: whirling.

gyre daarz n.

1. a turning round, revolution, whirl; a circular or spiral turn.

2. a ring, circle, spiral, or helix; also, a vortex.

gyroplane 'dan-z-preen n. a flying-machine in whose design the principle of sustention by means of gyrating or rotating aerofoils is given prominence; a flyer of the helicopter type.

gyropter ,d3ar'zoptoz n. a gyrating or rotating wing or aerocury; also, a flying-machine of the helicopter type in-

vented or advocated by Davidson.

gyroscope 'd3a1-z2, skop n. a device consisting essentially of a rotating wheel mounted in a ring and having its axis free to turn in any direction, exhibiting in its action the epposition which the axial momentum of a rotating bedy makes to any change in the plane of its rotation.

gyroscopie ,djai-zə'skopik adj. pertaining to or of the na-

ture of a gyroscope; rotatory.

gyroscopic effect, the balancing effect of gyroscopic action; the stedying effect characteristic of the gyroscope.

gyroscopic motor, a motor or gasoline engin in which, by rotation of cylinders, etc., a certain gyroscopic effect is obtaind.

gyroscopic stability, stability or stediness of an airship due to gyroscopic action of revolving aerofeils or other ro-

tary mechanism.

gyrostat 'd5a1-z5,stæt n. a device consisting ordinarily of a rapidly rotating fly=wheel pivoted as finely as possible within a rigid case, having a convex curvilinear polygonal border, in the plane perpendicular to the axis thru the center of gravity of the whole.

gyrostatic ,d3si-z3'statik adj. pertaining to the gyrostat or gyrostatics; connected with the principle that a rotating

body tends to maintain its plane of rotation.

gyrostatically ,d3a1-zə'stætikə-li adv. in a gyrostatic manner.

gyrostatics ,d3a1-zə'stætiks n. the science of gyrating or rotating bodies.

hail heel n. ice or frozen vapor falling in pellets or masses in a shower from the atmosfere.

soft hail, hail made up of small hailstones or frozen rainsdreps, usually mixt with rain and melting rapidly.

hail heel v.

1. intr. (impersonally): it hails, hail falls; (with subject) pour or send down hail.

2. tr. pour down as hail; throw or send down a shower

like hail in a storm.

hail-band 'heel, bænd n. a band or narrow tgact of ground coverd with hail; one of the stgips of land (usually parallel to each other and to the path of the sterm) which, as a result of a hailstorm, is left coverd over with hailstones.

hail-cloud 'heel, kzaod n. a cloud from which hail falls; a

cumulus cloud in the hail stage.

hail-gage 'heel,geed3 n. [also spelt hail-gauge] a gage for mesurrng the amount of hail which has fallen; a rain-gage so arranged as to separate the hail from the rain and allow of the separate mesurement of each.

hail-shower 'heel, Sou-ez n. a shower or light fall of hail.

hailstone 'heel, stoon n. one of the stones or pebbleslike masses of ice which fall in a hailstorm; a pellet of hail.

hailstorm 'heel, sto:zm n. [also spelt hail-storm] a storm or

violent fall of hail.

hair-hygrometer 'he:z-hai,gzomi-təz n. an instrument invented by Saussure for mesuring atmosferic humidity; a hair-hygroscope.

half-gale 'ha:f,geel n. a gale intermediate between a mod-

erate gale and a whole gale; a fresh or strong gale.

halo 'hee-to n. [ploral halos, haloes] a circle of either white or prismatically colord light seen round a luminous bedy and usually due to refraction; specifically, one of the pair of large colord or white concentric circles, red inside, commonly of 22 or 46 degrees radius, sometimes seen around the sun or moon, and due to the refraction of light as it passes thru ice-crystals of cirrus cloud or cirro-nebula.

diffraction halo, a halo due to diffraction of light, rather

than to refraction or dispersion.

halter 'hæltez n. [ploral halteres] one of a pair of slender processes with clubd ends placed near the insertion of the wings in a dipterous insect or a male coccid, supposed to aid in balancing the insect; a poiser; a balancer.

halteres ,hæl'tı: ziz n. pl. see halter.

hamuli 'hæmjo,lai n. pl. see hamulus.

hamulus 'hæmju-ləs n. [plural hamuli] one of the minute hooks or hook-like processes similar to the (plain) barbicels or cilia, forming a fringe or frayed edge to a barbule of a bird's fether; a hooklet. hand-wheel 'hænd,will n. a wheel workt by hand, as one of those for warping wings or operating the elevating-plane. at either side of the driver's seat in a monoplane.

hang han intr. remain suspended or persed in the air, as a hird or an airship sometimes does or seems to do: be pend-

ent: hover.

hangar 'hæn,quz, 'hængəz, 'hanəz, 'hen,guz, 'en,guz n. [also, sometimes, spelt hanger] a shed or house for sheltering balloons or airships; an airshipshed; an aeroplaneshed.

hangarward 'hænəz-wəzd adv. toward the hangar or aeroplaneshed.

hanger 'hænez n, that part of a kite to which the guy-line is

hung or attacht.

harbor 'haz-bez n. [also spelt harbour] a place of shelter; a shelterd recess in a coast-line fit for use as a port or haven for waterships.

air harbor, same meaning as airsharbor. earth harbor, same meaning as earth-harbor.

harmattan .hoz'mætn n. a dry porching land-wind which blows during December, January, and February on the coast of Upper Guinea in Africa, obscuring the air with clouds of reddish or white dust from the desert.

hawk hc:k n. any diurnal bird of prey which is neither a vulture nor an eagle, or, more exclusivly, neither a buzzard, falcon, harrier, nor a kite; a bird of the subfamily Accipi-

hawk-like 'hc:k,lark adj. [also spelt hawklike] like or re-

sembling a hawk; like that of a hawk.

haze heez n. an obscuration of the atmosfere or gravish tint of sky due to particles of dust in the air: especially frequent in dry spells in summer, and, in hot climates, causing the sky to assume even a peassoup color.

aqueous haze, a haze, or misty appearance of the atmosfere, due to the presence of aqueous particles (water-particles), and usually having a blue or whitish tint according as

the particles are small or large; water-haze.

cirrus haze, cirrosstratus cloud.

haze-fire 'heez,faiz n. brilliantly luminous haze or mist. hazeless 'heez-los adj. free from haze; without haze.

head hed n. [also spelt hed]

1. the main port or surface of a kite, such as Tatrn's, as distinguisht from the tail or fins.

2. the fore or foremost part or end of an aerofoil, airship, or flyer; the part in front of the shoulder; the front.

3. (in aerostatics) the difference of pressure on a unit of base existing between two fluid columns of different densities communicating at their bases; also, the pressure of a confined volume of gas upon a unit of the interior surface

of the confining vessel.

head-area 'hed, e:-zi-a n. [also spelt hed area] the area of the hed (or part in front of the shoulder) of an aerofeil or airship: the area of a surface which offers hed-resistance.

equivalent head-area, a hed-area or area of hed which is equivalent to the aggregate of the hed-areas of all the parts of an airship considerd separately; the sum of the hedareas of any airsmachine.

head-breeze 'hed,bziiz n. [also spelt hed:breeze] a breeze or light wind blowing directly against the hed or foresport of

an airship; a breeze coming from the front.

header 'heder n. [also spelt heder] a fall hedefirst or on the

hed, as of a bird. compare cropper.

headless 'hed-los adi. [also spelt hedless] having no hed; destitute, or nearly destitute, of hed-piece or front projecting portion: as, the Wright *hedless biplane.

head-piece 'hed,pris n. [also spelt headpiece, hed-piece] the piece or part which forms the hed or front projecting portion of an aeroplane flyingsmachine; the opposit of tailbiece.

head-resistance 'hed-zi, zistns n. [also spelt head resistance, hederesistance] the resistance which the hed, hull, body, frame, or car of a balloon, airship, or flyer, considerd apart from the spars, rigging, and sustaining surfaces, offers to the air, in flight; the hull-resistance; the body-resistance. compare drift.

headway 'hed, wee n. [also spelt hedway] the motion (of an airship) ahed or forward; rate of progress: as, initial *hed-

way; to make *hedway against the wind.

head-wind 'hed, wind n. [also spelt hed wind] a wind blowing directly against the hed or fore-part of an airship; a wind coming from in front.

heat hit n. the form of energy concemitant with the sensa-

tion felt when near fire, etc.

latent heat of precipitation, that part of the latent heat of evaporation which is set free when the vapor is precipitated or condenst in the form of water or cloud.

heat-haze 'hit, heez n. a hazy condition of the air in het

wether; haze.

heat-lightning 'hrit, lart-nin n. [also spelt heat lightning] sheet lightning, occurring in hot wether as a result of a storm so distant that the thunder is inaudible; summer= lightning.

heat-stroke 'hit, strook n. an affection of the nervous system, often fatal, caused by exposure to excessiv heat; collans or fever due to exposure to atmosferic heat.

heat-wave 'hiit.weev n. a wave of hot wether; a hot wave.

heaven 'heven n. Talso spelt heven; commonly used in the ploral] the sky, the firmament; also, a zone or region.

heavenward 'heven-werd adv. [also spelt hevenward] toward the hevens: hevenwards: skyward.

heavier-than-air ,hevi-əz-də'ne:z, (assumptivly) 'hevi-əz-dəne:z adi. [also spelt hevier-than-air] possessing greater weight in proportion to bulk than the air or atmosfere; of greater specific gravity than the air, as a gasless aerial vehicle: said of gliders, aeroplanes, and other airships which do not depend upon gases lighter than the air, or upon rarrfied air or a vacuum, for sustaining power: the opposit of lighter=than=air.

heel hill intr. incline or cant from a vertical position; turn

partly over: tilt.

height hart n. [also spelt hight; synonymous cognate highth] 1. the quality of being high; highness, altitude, elevation: as, the *height of the earth's atmosfere; the *height of his flight.

2. the maximum vertical dimension of an aerial vehicle.

3. a high point or position: as, to fall from a given *height; to fly from *height to *height. height-control 'hart-kon, trool n. the control of the height of

a balloon or airship above the earth; altitude control. height-flyer 'hait, frai-sz n. one who flies for a height-

record; an aviator who is trying for altitude.

height-prize 'hart,psarz n. a prize for attaining height, as in an aeroplane; a prize for high flying.

height-record 'hart, zekozd n. a record for height; the best recorded achievement in high aeroplane-flying.

helical 'heli-kel adj. belonging to or having the form of a

helix; screwshaped; spiral.

helicoid 'heli,koid n. (in geometry) a warpt surface generated by a moving straight line which always passes thru or touches a fixt helix.

helicoid 'heli,keid adj. of or pertaining to a helicoid or a helix.

helicoidal ,heli'ker-di adj. relating to a helicoid or helix; screwshaped; spiral.

heliconef 'helika,nef n. an aeronef or hevier-than-air flying-machine of the helicopter type invented by H. Chatley. helicoplane 'helika,pien n. a flyingsmachine of the helicopter type invented by Hinriker; a flyer with revolving

aeroplanes.

helicopter heli'koptəz, hili'koptəz n. [synonymous cognate helicoptere, helicoptere] a flying-machine invented by Pénaud about the year 1870; also, any one of various similar flying-machines, such as those designed or advocated by Leonardo da Vinei, Launoy and Bienvenu, Phillips, Edison, Berliner, Cornu, and others, depending, for liftings or sustaining-power, upon vertical screws or rotating aerofoils; a flying-screw; a gyroplane: distinguish from aeroplane and ornithopter.

helicopteric ,heli'keptə-zik adj. of the nature of a heli-

copter or vertical-screw flyer.

helicoptic, helr'keptik adj. same meaning as helicopteric. helicoptically, helr'keptika-li adv. by means of, or in the manner of, a helicopter: as, to fly *helicoptically.

helices 'heli,siz n. pl. see helix.

heliophotometer ,hii-li-o-fə'tomi-təz n. [also spelt heliofotometer] an instrument for mesuring and recording the duration of sunlight introduced by F. Craveri about 1874.

helix 'hii-liks n. [ploral helices, helixes] anything of a spiral or coild form whether in two dimensions (like a watche spring) or in three dimensions (like a corkscrew); (in geometry) a curv formd by a straight line traced on a plane surface which is then wrapt round a cylinder; a curv on any developable surface which becomes a straight line when the surface is unrolled into a plane; a gyre: sometimes distinguisht from spiral, which is often a plane curv. helix of travel, the helix or helical curv described by the

extremity of the blade of a screw propeller in its travel or

translatory motion thru the air.

helm helm n.

1. the handle, tiller, or wheel by which the rudder of an airship is managed; the steering-wheel; the steering-gear.

2. a helmscloud; a helmet.

helm-bar 'helm,ba: n. a bar of cloud formd at the summit of a standing wave of air; a roll of cloud suspended below a helmscloud.

helm-cloud 'helm,kloud n. a stationary cloud formd at the summit of a standing wave of air; a dork cloud which rests on the brow of a mountain before a storm; a helm or helmet.

helmet 'helmit n. a helmscloud; a helm.

helm-wind 'helm, wind n. a wind which produces helm or helm-cloud.

hemipter hr'miptoz n. any insect of the order hemiptera.

hemiptera hr'miptə-zə n. [singular hemipteron] a large order of insects, such as bugs, lice, and plant-lice, characterized by a suctorial mouth and, in the largest group (heteroptera), by wings of heterogeneous or non-uniform texture. in that they are coriaceous at the base and membranous at the tip; the rhyncota.

hemisphere 'hemi,sfi:z n. [also spelt hemisfere] a half sfere; one of the halves of a sfere or globe, such as the gasbag of a balloon, formd by a plane passing thru its

center.

heteropter .hetə'zoptəz n. any bug or insect of the suborder

heteroptera.

heteroptera ,hetə'zoptə-zə n. pl. a suborder of hemiptera comprizing those insects whose wings are of heterogeneous texture or consist of dissimilar ports, being coriaceous at the base and membranous at the trp; the true bugs: contrasted with homoptera.

high has n. an area of high barometric pressure, bounded by

an isobor: an anticyclone.

high-flyer 'har.frai-oz n. [also spelt high-flier] one who flies high; an aviator who makes flights at great altitudes. habitually flying high in the air; used to flight at great altrtudes.

high-flying har'frai-in, (assumptivly) 'har frai-in adi, habitually flying high in the air; used to flight at great alti-

tudes

hill-map 'hil, mæp n. a map showing the hills or the relief of the land-surface.

hillside 'hil, said n. [also spelt hillside] the side of a hill;

the lateral slope of a hill.

hilltop 'hil,top n. [also spelt hill-top, hill top] the top or

summit of a hill.

hind-wing 'haind, win n. [also spelt hind wing] one of the hinder or under pair of wings of an insect having two pairs of wings; a posterior wing; a metathoracic wing; an inferior wing: as, the *hind-wing of a butterfly.

hoar-frost 'ho:z,fse:st n. the white deposit formd by the freezing of dew; frozen dew; white frest.

holding-rope 'hool-din, zoop n. one of the ropes attacht to a balloon or airship and used in holding the craft to earth previous to starting.

homer 'hoo-moz n. a homing pigeon; a carrierspigeon.

homing 'hoo-min adj. that goes home; traind to fly homeward, as a carrierspigeon.

homopter ho'mopter n. any insect of the suborder homoptera.

homoptera ho'mopto-zo n. pl. a suborder of hemiptera comprizing insects of various kinds, with wings of homogeneous or uniform texture: contrasted with heteroptera.

hood hod n.

1. a false cirrus cloud enveloping a mountainstep or the summit of a cumulussdome, formd by the upward airscurrents.

2. a covering fastend to the valv-ring of a balloon and extending over the gasbag which it protects from the heat

of the sun, etc.

hooklet 'hokest n. one of the minute hooks or hook-like processes similar to the (plain) borbicels or cilia, forming a fringe or frayd edge to a borbule of a bird's fether; a hamulus.

hoop houp, hop n. the circular band or ring of metal or other stiff material from which the cor of a balloon hangs and to which are fastend the guysropes or cords connected with the network enveloping the gasbag above; the concentrating-hoop; the ring.

hop hop v. fly along or over the ground in a manner similar

to that of a person or a bird that hops or leaps.

horizon hə'zar-zən n.

1. the line at which the earth and sky appear to meet; the boundary-line of that part of the earth's surface which is visible from a given point of view, or any particular part of this line as contrasted with another part of it; more strictly, the circle bounding that part of the earth's surface which would be visible if no irregularities or obstructions were present: also cald the apparent, fysical, natural, sensible, or visible horizon: as, sweeping round the *horizon; clouds moving from one *horizon to the other.

artificial horizon, a level reflecting-surface, usually of

mercury, used in taking altitudes.

axis of the horizon, an axis or straight line which is perpendicular to the plane of the horizon at the point where the observer stands.

contracted horizon, an horizon whose limits are contracted, or which is less distant or extensive than usual on account of mist, smoke, rain, snow, etc.

false horizon, same meaning as artificial horizon.

mean horizon, the average horizon or horizon-line; the middle or intermediate position in any irregularity of the line of the horizon.

2. (in astronomy) a great circle of the celestial sfere the plane of which passes thru the center of the earth and is parallel to the plane of the sensible horizon of a given

place: distinguisht as the astronomical, celestial, mathematical, rational, real, or true horizon.

geographical horizon, the great circle on the earth's surface in the plane of the celestial or astronomical horizon.

oblique horizon, the celestial horizon of any place be-

oblique norizon, the celestial norizon of any place be

tween the equator and either pole.

right horizon, the celestial horizon of a place on the equator of the earth, the plane of which is perpendicular to the plane of the eqinoxial.

horizonless hə'zar-zən-ləs adj. having no definit horizon;

visually boundless.

horizon-line hə'zar-zən,laın n. the line of the horizon; the horizon.

horizontal ,hezr'zenti adj. parallel to the plane of the hori-

zon; level, flat.

horse-power 'he:zs,pau-əz n. [also spelt horsepower] the power or rate of work of a horse in drawing; (in mechanics) a unit for mesuring the work of a motor, usually 550 foot-pounds per second (or about one and one-third times the actual power of an average horse).

horsetail 'ho:zs,teel n. a form of cirrus cloud resembling a

horse's tail; mare's tails.

hot-windy 'hot, windr adj. (in Australia) characterized by the presence of hot winds. see under wind.

house houz tr. put away in a house or shed; place under cover; shelter: as, methods of *housing balloons.

house-top 'haus, tep n. the tep of a house; roof.

hover 'havez v.

1. intr. hang or remain suspended in the air over, above, or about a particular place or spet, with or without the flapping of wings, especially when preparing to dort or swoop in some direction; float or remain suspended in air.

2. tr. (obsolete) flap or flutter (the wings), so as to main-

tain itself in the air, as a bird sometimes does.

hover 'havez n. an act of hovering, as that of a bird.

hoverer 'havo-zoz n. a creature or thing that hovers in the air; specifically, any bird that habitually hovers, or practises hovering flight.

hovering 'have-zin m an act of hovering; the action or condition of hovering; suspension or poising in the air, as

with fluttering or outstretcht wings.

hull hat n. the frame or body of a dirigible; the float-vessel of an airship: as, an aluminum *hull divided into sixteen gastight compartments.

hull-resistance 'hal-zi,zistns n. the resistance which the hull, bedy, frame or cur of a balloon, airship, or flyer,

considerd apart from the spars, rigging, and sustaining-surfaces, offers to the air, in flight; body=resistance; hed= resistance: contrasted with drift.

humidity hov'midi-ti n.

1. the quality or condition of being humid or moist;

moisture, dampness.

2. liquid matter, especially condenst water-vapor, which makes a body or locality humid or moist; moisture in the air, such as vapor, mist, or feg; damp.

humming-bird 'hamin,bb:zd n. any bird of the large family Trochilidae, remarkable for the humming sound made by the vibration of the wings, which is more rapid than

that of any other kind of bird.

hurricane 'hazi,ken n. a violent wind-storm or wind prevailing around the center of a West Indian or other tropical cyclone, whose rate varies from 80 to 130 miles an hour; any storm or tempest in which the wind blows with terrific violence; specifically, a wind (numberd 12 in Beaufort's wind-scale) having a velocity of about 50 meters per second.

hurricane wind, see under wind,

hurricane-distance 'hezi-ken, distant n. the distance of the center of a hurricane from any given point, often roughly calculated from the average rate at which the barometric pressure is falling; the distance of the center of a hurricane according to the law of storms.

hurricane-range 'hezz-ken,zeend3 n. a range or region in

which hurricanes prevail or occur.

hurricane-signal 'hezi-ken,signal n. a wind-signal used with reference to an approaching hurricane; a hurricanes warning.

hurricane-track 'hezi-ken,træk n. the track, path, or

course of a hurricane.

hurricane-warning 'hezi-ken,we:z-nin n. a warning of an approaching hurricane; a hurricane signal.

hurtle 'heath intr. move with a clattering or clashing noise; dash along with a rattling or rustling sound; rush noisily.

hurtling 'heztrin n. the action of the verb hurtle; rushing, clattering flight or other movement: as, the *hurtling of a

hurtling 'haztzin adj. that hurtles; characterized by noisy

rush: as, a *hurtling gait.

hydro-aeroplane ,har-dro'ee-əzə,pleen n. a hydroplane equipt with aeroplanes enabling it to rise from the water and fly thru the air; a combination of a hydroplane with an aeroplane flyer; also, an aeroplane with floats.

hydrodynamics ,har-dro-dar'næmrks adj. the science of the forces acting upon or exerted by liquids, now often including both hydrostatics and hydrokinetics. see dynamic.

hydrogen 'hai-dro-d3in n. an elementary substance, under ordinary conditions a colorless, odorless gas, burning with a pale-green flame, and the lightest substance known, having a specific gravity of about one fourteenth that of air; used for inflating balloons; hydrogen gas.

liquid hydrogen, hydrogen in the liquid form; a colorless liquid obtaind by cooling hydrogen gas under great pres-

sure.

hydrogen-balloon 'hai-dra-dzin-ba,loun n. a balloon whose gasbag is inflated with hydrogen gas.

hydrographie ,hui-dtə'gzæfik adj. [also spelt hydrografic] pertaining or relating to hydrografy.

hydrography ,har'drogzə-fr n. [also spelt hydrografy] the science or description of the seas, lakes, rivers, and other waters of the earth's surface as to distribution, contour, currents, shallows, and otherwise; the study and mapping of the watersfeatures of the earth.

hydrometeor ,har-drə'mri-ti-əz n. a meteor or atmosferic fenomenon dependent upon waterzvapor; any one of the aqueous fenomena of the air, as cloud, rain, snow, hail.

hydrometeorological har-dra, miti-aza'led3x-kał adj. of

hydrometeorology har-dra, miti-a'zala-dai n. that branch of meteorology which is concernd with hydrometeors.

hydroplane 'har-dra,peeen n.

1. a machine consisting essentially of a plane or plate designed to be driven by power along the surface of a body of water; a boat designed to ride on planes submerged in

or skimming along the surface of water.

2. a plane or plate designed to be attacht to the lower part of an aeroplane flying-machine so as to enable the aeroplane to skim along on the surface of the sea or other body of water; a hydroplane plate attacht to a flying-machine.

hydrostatic ,har-drə'stætik adj.

1. relating to the equilibrium of, and pressure exerted by, liquids, when static or at rest; belonging to hydrostatics; also, depending on air-pressure.

2. floating in or on the water, as certain univaly shells;

also, relating or instrumental thereto.

hygrodeik 'har-gzə,daik n. an instrument for showing the moisture or humidity of the air; a form of hygrometer con-

sisting of a wet-bulb and a dry-bulb thermometer with a scale and pointer between them.

hygrometer ,har'gzomi-təz n. an instrument for mesuring the humidity of air and other gases; a device for determining the degree of saturation of the atmosfere with waters vapor.

chemical hygrometer, a hygrometer in which a known volume of air is past over a hygroscopic substance, as calcium chloride, containd in a drying-tube.

condensing hygrometer, a hygrometer which operates by means of the condensation of the atmosferic water-vapor;

a dewspoint hygrometer.

Daniell hygrometer, a condensing or dewspoint hygrometer consisting of a bent glass tube ending in two bulbs and

working by means of the evaporation of ether.

dew-point hygrometer, a hygrometer, as that of Daniell, by means of which the dew-point is first obtaind, and thence the humidity of the air is calculated; a condensing hygrometer.

Dufour's hygrometer, a hygrometer which operates by diffusion of air thru a porous diafram on one side of which

the air is kept saturated with aqueous vapor.

Edelmann's hygrometer, a hygrometer especially adapted for mesuring the tension or volume of the gaseous waters vapor in the air, without taking account of fogsparticles.

Mason's hygrometer, the psychrometer or wet-and-dry bulb

as arranged by Mason.

Regnault's hygrometer, a condensing or dewspoint hy-

grometer invented by Regnault

Renoux-Matern hygrometer, a hygrometer by which the quantity of water-vapor required in order to saturate a a given volume of air is first determind and the humidity thence calculated.

Trouton's electrical dewspoint hygrometer, a hygrometer operating by the deposition of a film of dew on a polisht metallic surface and the consequent closing of an electric circuit thru this moisture.

Trouton's gravimetric recording hygrometer, a hygrometer which operates by recording the weight of a hygrometric or moisture-absorbing body by means of a stylus on a revolving drum.

hygrometric ,har-gzə'metrik adj.

1. of hygrometry; hygrometrical; also, hygroscopic.

hygrometric balance, a form of hygroscope.

hygrometric state, the state of the atmosfere as to humidity or water-vapor.

2. redily absorbing and retaining moisture: as, a *hygrometric substance, a *hygrometric plant.

hygrometrical ,har-gzə'metgi-kəl adj. same meaning as hy-

arometric.

hygrometrically har-gzə'metrikə-li adv. in a hygrometric manner: with respect to hygrometry.

hygrometricity ,har-gza-mi'tgisi-ti n. the property of being hygrometric or of becoming moist by absorbing water from the air.

hygrometry har'gzemi-tri n. the art of mesuring humid-

rty, especially that of the atmosfere.

hygroscope 'har-gza, skop n. an instrument for showing the humidity of the air, as that of Saussure: a hair hygrometer.

hygroscopy har'gzeska-pi n. the art of using or of making hygroscopes; also, the art of observing humidity-conditions, or of making them apparent.

hygrothermal ,hai-gzə'θΒ:z-məl adj. of the humidity and

temperature of the atmosfere considerd together.

hygrothermal area, an area of the earth's surface over which the atmosferic conditions are included within certain limits as to humidity or temperature.

hymenopter har-mi'noptez n. any insect of the order Hy-

menoptera.

hymenoptera ,hai-mi'noptə-zə n. pl. a large order of insects including the ants, wasps, and bees, having (normally) four hymenoid or membranous wings.

hyperbola ,har'pa:z-bə-lə n. [ploral hyperbolas] a plane curv consisting of two separate equal infinit branches formd by the intersection of a plane with both branches of a double cone.

hypopteron ,har'popta-zan n. the linear fether tract which extends from the axilla or ormspit outward, on the under

side of a bird's wing.

hypoptilum ,har'popti-lam n. same meaning as hyporachis. hyporachis ,hai-pə'zee-kis n. [also spelt hyporhachis, hyporrhachis] the accessory or subsidiary rachis, shaft, or plume of a bird's fether which springs from the main stem at the junction of quill and rachis; the hypoptilum; the aftershaft.

iceberg 'ais,ba:zg n. a large mass or mountain of ice detacht from a Polar glacier and carried out to sea.

ice-blink 'ars, blink n. a peculiar whitening of the sky, low down near the horizon, seen in the Arctic regions on approaching an ice-floe, and caused by the reflection of light by the ice.

ice-cloud 'ars,kraud n.

1. any one of the class of clouds or cloudlike bodies comprizing the cirrus clouds and cirrosnebulae, whose component particles are minute icescrystals; a cirrus; a cirrosnebula: distinguisht from waterscloud.

2. a low cloud composed of ice-particles or of waterglobules colder than ice which, upon contact with solid bodies, adhere as frostwork; a frost-cloud; a rime-cloud.

ice-crystal 'ais,ksisti n. a crystal of ice; one of the minute crystals or particles of which an ice-cloud or cirro-nebula is made up; an ice-particle.

ice-cycle 'ais, sai-kəl n. an apparatus for traveling or coursing on the surface of the ice of rivers, lakes, etc., driven by an aerial screw propeller; a motor driven ice boat.

ice-field 'aus, fulld n. a field or wide flat expense of ice, especially of marine ice in Polar regions.

ice-floe 'ais, fixo n. a large sheet of floating ice. sometimes

several miles in extent; an ice-float; a floe.
ice-fog 'ais, fog n. a fog due to wind blowing over ice-fields

ice-riog als, log n. a log due to wind blowing over ice-ricus

ice-pack 'ais,pæk n. a body of separate pieces or driftsice closely packt so as to form one icesfield.

ice-particle 'ais,parti-kəl n. one of the minute particles of ice occurring suspended in the atmosfere, often forming ice-cloud or cirro-nebula; an ice-crystal.

ice-sky 'ass, skai n. a bright whitish sky or atmosferic appearance near the horizon, in the Polar regions, indicativ of fields of ice or snow.

ice-spicula 'ais,spikçu-lə n. [ploral icespiculae] a spicula or spicule of ice; an icespicule.

ice-storm 'ais, sto:zm .w. a precipitation of ice from the atmosfere, as a hailstorm or a fall of sleet or rain which freezes or turns to ice upon coming into contact with objects.

ichthyoid 'ikθi,oid adj. resembling a fish; fish-shaped.

igniter, 19' na1-təz n. an electric coil or other device in an internal-combustion engin for igniting or setting fire to the explosiv mixture of gases with which the cylinder is charged.

ignition ,1g'nr\omegan n. the process or action of rgniting or being set on fire; a kindling; specifically, the igniting of the mixture of air and hydrocarbon in the cylinder of an internal combustion engin, causing the gaseous mixture to expand and thus produce motion,

hotstube ignition, ignition in an internal-combustion engin by means of compressing the explosiv gaseous mixture thru a tube which is kept hot by an external flame.

jumb-spark ignition, a form of electric ignition, in an internal-combustion engin, which utilizes a spork which is made to jump between the gap-terminals of the secondary circuit of an inductionscoil.

make-and-break ignition, a form of electric ignition, in an internal-combustion engin, which utilizes a spork in a primary circuit which is made and broken mechanically or magnetically.

ignition-point ,1g'n1fan,point n. the point of time at which the ignition of the explosiv gaseous mixture takes place in an internal-combustion engin; that point in the stroke of a gasoline engin at which the charge is ignited.

ignition-tube ,1g'n1fen,tcoub n. the tube in an internal= combustion engin in which the ignition of the explosiv gaseous mixture takes place, as in the hotstube system.

impeller im'pelaz n, a device for impelling or driving forward; a propeller: as, Gordon's fumific *impeller.

impermeable im'ps:z-mi-a-bal adj. not permeable; not permitting the passage of gas or other fluid thru its substance, as a gasstight balloonsenvelop.

impulsion im'palfon n. the act of impelling or forcing forward; impelling force or action; propulsion.

incidence 'insi-dns n. the falling of a line, or anything moving in a line, upon a surface; also, the manner of such falling.

angle of incidence, see under angle.

index 'in,deks n. a numerical quantity which mesures some property of a particular substance or structure, for which it is constant; an exponent; a coefficient.

Indian 'indi-an adi.

Indian summer, a hazy condition of the air known as dry fog, caused by dust high up in the air, occurring sometimes in November or early December in some parts of the United States and known also in Central Europe.

indirigible ,in'dizida-bəl adj. not dirigible; incapable of

being steerd.

indraft ,in'dra:ft n. [also spelt indraught] an inward draft or current, as of air; a drawing or flowing inward.

inflate in'fixet tr. blow out or distend, as with wind, air, or gas; fill (a balloon, gasbag, tire) with air or gas,

inflated in'fire-tid adj. puft out or swollen by air or gas.

inflater in'fice-toz n. [also spelt inflator] one who or that
 which inflates.

inflating-gas in'flee-tin,gæs n. gas used for inflating a balloon or the gasbaq of an airship; balloon-gas.

inflating-neck in'free-tin, nek n. the neck or tube thru which a balloon is inflated or fild with gas; the inflations tube.

inflation in'free-fon n.

1. the action of inflating or filling with air or gas; filling

2. the condition of being inflated with air or gas; distended or swollen condition.

inflation-tube in'face-San, toub n. the tube or pipe thru which a balloon is inflated; the inflating-neck.

inflowing 'in, f200-in adj. flowing or blowing inward, that is, toward the land; blowing inland: as, an *inflowing seasobreeze.

inrush 'in,zas' n. a rushing in; a rapid inflow, as of air; an inrun; an influx.

instability ,insta'bili-ti n. lack of stability, stedfastness,
 or balance; unstediness: as, rotativ *instability.

intake 'in, teek n. the amount or quantity of air taken in by, or passing thru, a propeller or air screw.

intercity 'intoz,siti adj. extending or taking place between
cities: as, an *intercity flight.

interplane 'inter, pleen adj. [also spelt intersplane] extending between the planes or aerofeils of a flyingsmachine: as, an *interplane stgut.

inversion in'verson n. same meaning as inversion-zone.

inversion-zone in'vbzsən,zoon n. a horizontal zone or canopy consisting of compact masses of warm air which have risen and spred out, floating in the cold atmosfere at a considerable altitude: as, the upper *inversion-zone. compare zone of discontinuity, under zone.

inviscid ,in'visid adj. not viscid; having no viscosity; not

sticky.

irrotation , zzo'tee-jen n. absence of rotation; want of rotatory movement.

irrotational ,125'tee-50-nl adj. not rotational; characterized by absence of rotation; destitute of rotatory motion; possessing irrotation.

isametral ,ai-sə'metrəl adj. having the same average climatic conditions during a specified period; marking equal-

- rty of climate; passing thru points or places so characterized: as, an *isametgal line.
- isametral ,ai-sə'metrəl n. an isametral line.
- isanomal ,ar-sə'noməl n. a line, as on a wethersmap, which passes thru points or places on the earth's surface having equal anomalies of temperature, atmosferic pressure, etc.; an isanomalous line.
- isanomalous, as-sə'nomə-ləs adj. having or marking equal anomalies or departures from normal meteorologic conditions.
- isobar 'ai-sə,ba:z n. a line, as on a wether map, which passes thru points or places on the earth's surface where the sealevel barometric pressure is the same (at a given time, or on the average for a given period); an isobaric line.
- isobaric ,ai-sə'bæzik adj. of equal weight or pressure; marking equality of atmosferic pressure; passing thru points or places on the earth's surface where the atmosferic pressure is the same; isobarometaic: as, an *isobaric line.
- isobarometric ,ai-sə-bæzə'metrik adj. of equal barometric conditions; marking equality in atmosferic pressure; passing thru points or places on the earth's surface having such conditions, as a line on a wether-map; isobaric.
- isobront 'ar-sə,bzont n. a line, as on a wethersmap, which passes thru points or places on the earth's surface at which the first thunder is heard at the same instant of time; a line of equal front. In France the isobront is drawn thru the points where the mean of the time at which the first and last thunder is heard is the same instant.
- isochimal 'ar-sə,kar-məl adj. [also spelt isochemal] of an isochime or isochimes; of equal mean summer temperature; isochimenal; isochimonal: as, *isochimal lines, an *isochimal chart. compare isotheral.
- isochime 'ai-sə,kaim n. [also spelt isocheim] a line, as on a wether map, which passes thru points or places on the earth's surface where the mean winter temperature is the same; an isochimal line.
- isochimenal ,ar-sə'kar-mr-nl adj. same meaning as iso-chimal.
- isochimonal, ar-sə'kar-mə-nl adj. [also spelt isocheimonal] same meaning as isochimal.
- isohelic ,ai-sə'hri-lik adj. having equal amounts of clear sunshine; marking equality as regards sunshine: as, an *isohelic line.

isohelic ,ar-sə'hri-lik n. an isohelic line.

isohyetal ,ar-sə'hai-r-ti adj. of equal rainfall; marking equalrty of rainfall; passing thru points or places on the earth's surface where the amount of rain which falls is the same: as, an *isohyetal line, an *isohyetal chart.

isopag 'a1-sə,pæg n. a line, as en a wethersmap, which passes thru points or places on the earth's surface where the conditions as to frozen waterssurfaces, as of rivers, lakes, horbors, etc., ore the same.

isopye 'ai-sə,pik n. [also spelt *isopyk*] an isopycnic line; an isopycnic: the inverse of *isostere*.

isopycnal ,ai-sə'pikni adj. same meaning as isopycnic.

isopyenie ,ai-sə'piknik adj. of equal density; marking equality of atmosferic density; passing thru points or places in the earth's atmosfere where the density of the air is the same; isopycnal: as, an *isopycnic line.

isopycnic ,ai-sə'piknik n. an isopycnic line; an isopyc.

isostath 'ai-sə,stæθ n. a line which passes thru points or places in the earth's atmosfere where the air has equal buoyancy, due allowance being first made for variation in the force of gravitation.

isostere 'ai-sə,sti:z n. a line which passes thru points or places in the earth's atmosfere where the air has equal specific volume; an isosteric line: the inverse of isopyc.

isotheral 'aι-sə,θι:-zəl adj. of an isothere or isotheres; of equal mean summer temperature: as, *isotheral lines, an *isotheral chart.

isotheral 'ai-sə,θi:-zəł n. an isotheral line; an isothere.

isothere 'αι-sə,θι: π. a line, as on a wether-map, which passes thru points or places on the earth's surface having equal mean summer temperature; an isotheral line.

isotherm 'aι-sə,θε:zm n. a line, as on a wether≠map, which passes thru points or places on the earth's surface where the

mean temperature is the same; an isothermal line.

isothermal ,ai-sə'θε:z-məł adj. of equal heat; of the same temperature; marking equality of temperature; isothermous: as, an *isothermal chart, *isothermal relations.

isothermal line, a line, as on a wether map, which passes thru points or places on the earth's surface where the mean temperature is the same; an isothermal; an isotherm.

isothermal sone, a zone or belt on either side of the

earth's equator having the same mean temperature.

isothermal ,aI-sə'θΒ:z-məl n. an isothermal line; an isotherm.

jet dzet n.

jet propulsion, propulsion by means of a jet; a proposed mode of propelling airships by means of a powerfully emitted stream of air, steam, or gaseous products of explosive.

jettison 'd3et1-sən n. the action of throwing goods or material overboard, as in order to lighten a balloon or airship in

distress; also, the goods thus thrown out; jetsam.

kaguan ,ka'gwa:n n. a flying≥lemur, colugo, or kubong.

kedge ked3 intr. warp; move a balloon by means of a rope

attacht to an anchor.

keel kiil n. a long structure or framework of wood or other material extending lengthwise under an airship or kite for purposes of support, rigidity, or equilibration; the keel-like understructure of a dirigible; an aeroplane fixt in a vertical position underneath or in the hinder part of certain menoplanes or other air-craft as an aid in maintaining lateral stability.

on an even keel, in a position such that the keel is level or horizontal; in horizontal position: said of an airship.

keel-cloth 'kiil,kko:0 n. a cloth or sail placed longitudinally at the lower part of an airship or keel-kite, to aid in equilibrating or balancing the craft in flight.

keel-kite 'knii,kait n. a kite, invented by H. H. Clayton, in which a keel is employd to aid in equilibration or bal-

ancing.

keel-plane 'kiił,pleen n. a plane or aeroplane serving as a keel in a flying-machine; a keel in the form of a plane.

khamsin 'kæmsin n. [also spelt kamsin] a het and sometimes pestilential south or southeast wind which blows in Egypt at intervals for a periad of about 50 days in March, April, and May, filling the air with sand from the desert.

kinematic ,kini'mætik adj. relating to motion.

kinematics ,kini'mætiks n. the science of motion: distinquisht from dynamics.

kinetic kr'netik adj. of or pertaining to motion; causing motion; motory. compare static, dynamic, kinematic.

kite kart n.

1. a long-wingd diurnal bird of prey of the family Falconidae and subfamily Milvinae; a glede.

2. an apparatus consisting of a light frame with paper or other thin material stretcht upon it, designed so that it

may be flown or floated in the air by means of a long string or wire attacht to it.

aerocurve kite, a cellular kite, invented by C. H. Lamson, the main supporting-surfaces of which are aerocurvs or curve aerofeels.

auxiliary kite, a kite which is auxiliary or supplementary to the main or highest kite, being attacht to the line of the main kite in order to reliev the stgain on the main kite or to support the line.

Bell kite, a composit kite made up of tetrahedral cells,

invented by A. G. Bell about 1903; a tetrahedral kite.

biplane kite, a kite having the form of a biplane; a kite with two parallel superposed sustaining-planes.

bipolar kite, a kite tried by Bazin in 1888, the frame of which consists of a bow and a central stick, both of which are flexible.

bow kite, a kite whose frame consists of two sticks, one of which is a flexible red at the hed, bent to a bow, and the other a main central vertical spine (at right angles to the bow) to which the bow-strings are fastend.

box kite, a box-like kite or a kite made up of box-like parts; a cellular kite, such as that of Hargrave, Clayton, or Marvin, in which the front and rear cells are rectangular parallelepipeds.

boys' kite, any one of the various forms of kite commonly made or flown by boys; a flat or single-plane kite, such as the bow kite, the diamond kite, the hexagonal kite, or the star kite, whose frame consists of two or more crost sticks.

catamaran kite, see under catamaran.

cellular kite, a kite consisting of cellular compartments or parts, originally designed by Lawrence Hargrave of New South Wales, Australia, about 1892; a kite made up of open cells, which may be of rectangular, tetrahedral, circular, or other shape, and either simple or composit; a multiplane kite; a box kite.

Chinese kite, a kite of a kind especially common in China Japan, and the Malay Peninsula, made to resemble a bird, dragon, man, or other object.

circular kite, a kite of circular shape; a round kite.

collapsible kite, a kite which is collapsible or can be folded up for transportation.

diamond kite, a flat diamond-shaped kite; a single-plane kite having the form of a rhomb; a lozenge-shaped boy's kite.

double kite, a kite consisting of two sustaining units, as two Malay kites upon one backbone.

Eddy kite, a form of Malay kite which was introduced by Eddy about 1894, and was one of the first kites used in the United States for scientific purposes. The bowd cross= stick is placed at a point distant 18 per cent of the length of the vertical stick from the top of the kite.

electrical kite, a kite coverd with silk or vornisht paper and ormd with a wire, such as that employd by Benjamin Franklin to verify his hypothesis respecting the identity of

electricity and lightning.

folding kite, a kite that may be folded, for transportation:

a collapsible kite.

Hargrave kite, any one of the various forms of cellular kites invented by Lawrence Hargrave of New South Wales, Australia, about 1893 or subsequently: a box kite.

hexagonal kite, a flat kite of hexagonal form; a single= plane kite having the form of a hexagon or six-angled

figure: a six-sided boy's kite.

Japanese kite, a tailless kite, flexible in both dimensions, used in Japan and now commonly on sale in toy-shops.

Malay kite, a kind of lozenges or diamond-shaped kite, commonly tailless, much used in the Malay Peninsula. The frame consists of two flexible sticks crossing at right angles, one of the sticks being either so elastic as to bend easily in the wind, or permanently bent in the form of a bow.

military kite, a kite used for military or war purposes,

sometimes manscarrying; a warskite.

monoblane kite, a kite having the form of a monoplane; a single-plane kite; a flat kite; a boy's kite.

multiplane kite, a kite made of many, or several, planes

or aerofoils: a cellular kite.

multiple-disk kite, a kite consisting of a series of superposed disks or kites, such as the life-saving kite patented in Great Britain in 1850 by E. J. Cordner, or as the Chinese dragon=kite.

musical kite, a Chinese kite provided with a bamboo resonator which in flight produces an intense and plaintiv sound audible at a great distance.

rigid kite, a kite which is rigid or unyielding; a kite with

a stiff frame: a noneflexible kite.

rope=bearing kite, a kite proposed by Jobert in 1887, for bearing a life saving rope to a wreckt vessel.

self-registering kite, a kite carrying self-registering meteorological instruments, sent up in investigations of the atmosfere.

sextuble kite, a kite consisting of six sustaining-units. as six Malay kites upon one backbone; a sixfold kite.

single kite, a kite which has but a single sustaining-surface; a single-plane kite; a simple or non-multiple kite.

single-plane kite, a kite having but a single sustainingplane; a monoplane kite; a uniplane kite; a flat kite; a boy's kite.

star kite, a flat star-shaped or pentagonal kite; a singleplane kite having the form of a star or pentagon; a fiveangled or five-sided boy's kite.

tailless kite, a kite having no equilibrating tail, as a

Japanese kite: as, the Eddy Malay *tailless kite.

tetrahedral kite, a kite having a tetrahedral form, or made up of tetrahedral compartments, invented by A. G. Bell about 1903; a simple or composit cellular kite whose cell or cells have the general form of a tetrahedron or four-sided solid figure.

triple kite, a kite, consisting of three sustainingsunits, as three Malay kites upon one backbone; a threefold kite.

uniplane kite, a kite having only a single plane or aero-

foil; a single-plane kite; a flat kite; a boy's kite.

kite kart v.

1. intr. fly, soar, or glide thru the air like a kite; move along after the manner of a paper kite.

2. tr. cause to fly high in air like a paper kite.

kite-aeroplane 'kant-ee-əzə,preen n. an aeroplane used in or as a kite; a sustaining-surface in a kite.

kite-ascension 'kaɪt-ə,sɛnsən n. an ascension of a kite into the air; a kite-ascent.

kite-ascent 'kait-ə,sent n. same meaning as kite-ascension. kite-balloon 'kait-bə,loun n. a captiv balloon which flies somewhat in the manner of a kite; a longish balloon held captiv (by means of ropes attacht not to the basket but to the front and back of the gasbag or balloon itself), which sets itself diagonally, like a kite, to the direction of the wind: first proposed by A. Douglas, in 1845, and now used considerably in meteorologic work.

kite-battle 'kart,bæti n. a battle, fight, or conflict between kites; a kite-game in which the kites are made to war or fight with one another. Kite-battles constitute a regular

sport in Japan.

kite-boat 'kait, boot n. a boat which is especially designed to be propeld or puld along by a flying kite.

kite-building 'kant,buldin n. [also spelt kitezbilding] the art of bilding or constructing kites; kitezmaking.

kite-carriage 'kaıt,kæzıda n. a manscarryıng apparatus described by G. Pocock of Bristol, England, about 1827, consisting of a kite with a chair swung just below, and provided with cords for regulating flight.

kite-cell 'kart, set n. a cell intended for use as or in a kite; one of the cells or compartments of a cellular kite.

kite-club 'kant,krAb n. a club or society devoted to kite≈flying, as in Japan

kite-designer 'kaɪt-dɪ,zaɪ-nəz n. one who designs or contrives kites.

kite-designing 'kant-dr, zar-nin n. the act or process of designing kites; the occupation of a kite-designer.

kite-experiment 'kait-ik, spezi-mont n. an experiment in kite-flying; a testing of kites.

kite-expert 'kait,ek-spa:zt n. an expert on kites; one skild in the art of kitesmaking or kitesflying.

kite-factory 'kaut, fækta-zi n. a factory where kites are made; a kite-bilder's establishment.

kite-fancier 'kant, fænsi-ez n. one who fancies, or makes and flies kites; a kite-flyer.

kite-flier 'kait, flai-oz n. same meaning as kite-flyer.

kite-flight 'kart, frant n.

1. the mode of flight characteristic of paper kites.

2. a flight made by a kite; the action of flying a kite: as, the highest *kite*flights.

kite-flyer 'kant,fraf-oz n. [also spelt kite-flier] one who flies kites; a kite-fancier.

kite-flying 'kart, flai-in n. the practis, art, or amusement of flying kites.

kite-frame 'kait, seem n. the frame or framework of a kite. kite-game 'kait, geem n. a game or sport in which kites are flown, as in Japan.

kite-house 'kait, hous n. a house or structure from which a meteorologic kite is flown or controlled.

kite-like 'kuɪt,laɪk adj. [also spelt kitelike] like a kite ɪn form or appearance; resembling a kite.

kite-line 'kart, larn n. the line by which a kite is flown or controlled: a kite-string.

kite-meteorograph 'kart-miti,ozo-gza:f n. [also spelt kitez meteorograf] a small meteorograf designed to be carried by a kite; a combination of a barograf, thermograf, and anemograf adapted for use on a kite designed for exploring

the atmosfere. kite-observation 'kait-observation or accurate remarking of wether conditions made by means of a kite or kites.

kite-photograph 'kait, foto-gza:f n. [also spelt kitesfoto-

graf] a fotograf taken by means of a camera attacht to a kite or kite balloon.

kite-reel 'kartzril n. a reel for letting out or polling in the

line or string of a kite.

kite-sail 'kart, seel n. the sail or sustaining surface of a kite, or a sail or sustaining surface similar to that of a kite. kite-shaped 'kart, seept n. shaped like a kite; having the

form of a kite.

kite-station 'kart, stee-son n. a station, or point on the ground, from which kites are flown in meteorologic work.

kite-string 'kart, string n. the string or cord by which a kite is flown or controlled; a kite-line.

kite-surface 'kart, spzfis n. the surface or sustaining surface of a kite.

kite-track 'kant,træk n. a track, course, or grounds for racing or testing kites.

kite-winch 'kait, wint's n. a winch or windlass used in con-

trolling a kite-line.

kite-wind 'kait, wind n. a south or southwest wind in Siam, prevailing in the latter part of February and early March.

kite-wire 'kant, wanz n. the wire by which a kite is flown or controlled; a wire kite-line.

kite-work 'kait,wa:zk n. work done with or by the aid of kites, as meteorologic investigation.

knock-down 'nok,doon adj. knockt down or taken aport, as a flying-machine for shipment: as, the machine was shipt

ın *kneck=down ferm.

kona 'koo-no n. a southwest wind, usually associated with rain, interrupting the northeast tradewind, occurring in the Hawaiian Islands, principally from December to April.

krypton 'ksip,ten n. a constituent gas of the atmosfere discoverd by Ramsay in 1898.

kubong ,ku'ben n. a flyingslemur, colugo, or kaguan.

land hand n. the solid portion of the earth's surface, as contrasted with sea, water; also, ground, soil; and further, country, territory, landed property.

land lænd v.

1. tr. bring (an airship or its passengers) to land; set on the ground; disembark.

2. intr. come to land or earth with, in, or from an airship;

get out on the ground; disembark. compare alight.

land-area 'lænd,e:-zi-o n. [also spelt land area] the area or region of the land as distinguisht from the water or air; also, an area or tract of land. compare water=area.

land-bird 'lænd,bs:zd n. any bird which habitually lives on or above the land. compare seasbird.

land-breeze 'lænd,bzriz n. a breeze or light wind blowing from the land toward the sea; specifically, a regular nightwind blowing seaward on the coasts of continents and islands; a land-wind. compare sea-breeze.

land-flight 'lænd, frant n. a flight over the land or landarea, as distinguisht from a flight over the sea or other

large body of water. compare water-flight.

landing 'lændin n.

1. the act or process of bringing an airship to rest on the land.

emergency landing, a landing due to some emergency or

unexpected happening, such as engin-trouble.

2. a place or spet on the land or earth suitable for bringing an airship to rest; a place of coming to earth or land; a landing-place; an alighting-place.

landing-area 'lændin, e:-zi-a n. an area or tract upon which an airship may land or come to earth; an alighting-area.

landing-certificate 'lændin-sbz,tifi-ket n. a certificate or written permit authorizing one to land or come to earth with or in a balloon or airship.

landing-chassis 'lændin, Sæsis n. [ploral landing-chassis] the chassis or undersframework upon which a flying-machine

lands

landing-ground 'lændin,ground n. ground or land area which is suitable for landing in aeroplanes or other airships.

landing-hawser 'landin,hc:-səz n. a hawser or large rope attacht to and cast from a dirigible balloon when landing.

landing-operation 'lændin-ope, zee-sen n. the operation or process of landing a balloon or bringing it to earth; the act of alighting.

landing-pit 'lændin,pit n. a pit dug in the earth, proposed

as a place for landing and sheltering airships.

landing-place 'lændin,places n.

1. a place where an aeroplane or other airship lands or lodges, after a fall; a place where an involuntary landing is made.

2. a place or spot on the earth or ground suitable for landing or bringing a balloon or airship to rest; a landing spot; an alighting place; a landing.

landing-point 'andin, point n. a point or spot on the earth or ground suitable for landing or bringing an airship to rest: a landing spot: a landing place.

landing-privilege 'landin, psivi-lida n. a privilege to land or come to earth with or in a balloon or airship.

landing-skate 'lændin.skeet n. a skate-like runner or skid attacht to the under port of an aeroplane or other airship

as an aid in landing or alighting upon the ground.

landing-skid 'lændin,skid n. a skid or ski-like runner attacht to the under part of an aeroplane or dirigible as an aid in landing or alighting upon the ground; a landings skate; a runner; a skid.

landing-speed 'landin, spiid n. the speed with which a landing or descent to the earth is made, as by a man falling

from a height.

landing-spot 'landin, spot n. a spot or place where a landing is or may be made with an airship; a landing-place.

landing-stage 'landin, steeds n. a stage or platform, sometimes floating on water, for the landing of airships or their passengers or freight.

landing-station 'lændin, stee-son n. a station consisting of or provided with suitable grounds or structures for landing dirigible balloons or airships.

landing-wheel 'landing, will n. one of the wheels attacht to the under part of an aeroplane flying-machine as an aid in

landing or alighting upon the ground.

main landing=wheels, the principal landing=wheels; the

chief wheels of an alighting gear.

landmark 'lænd,ma:zk n. an object in the landscape which, by its conspicuousness or convenience, servs as a quide in directing one's course when voyaging in a balloon or airship.

land-sailing 'land, see-lin adj. habitually sailing or soaring over the land or land-area; capable of sailing over the

land: as, *land-sailing birds.

landscape 'land, skeep n. a view or prespect of natural inland scenery such as can be taken in at a glance from one point of view; the portion of the earth's surface seen by, or in sight for, an observer at any particular moment.

landsman 'lændzmen n. [plural landsmen] one who livs or stays on the land or surface of the earth, as distinguisht

from air-sailors or airmen; an earthman.

land-surface 'lænd, serfis n. a surface which is of land rother than of water; the ground; the terrain: distinguisht from water-surface. compare land surface, under surface.

land-wind 'land, wind n. a wind blowing from the land sea-

ward: a landsbreeze.

lap læp n. a single round or turn of a flying-course or circurt of flight; one of the number of turns round a races track or path of light which are required to complete the course.

- larboard 'la:z,bo:zd adj. on that side of an air-craft which is on the left as one faces the bow; port: the opposit of starboard.
- latitude 'læti,tçud n. distance' north or south mesured in degrees along the meridian vertically below the observer, on the surface of the earth; especially, the angular distance (of the plane passing thru any point, place, or position on or above the earth's surface and the center of the earth, perpendicular to the plane of the meridian at that point) north or south from the plane of the equator of the earth; also, a locality as markt by parallels of latitude; in ploral, regions, climes, or parts of the world.

calm latitude, same meaning as region of calms. see

under calm.

horse latitudes, same meaning as Calms of Cancer. see under calm.

lattice-girder 'lætis,gm:z-dəz n. [also spelt lattice girder] a latticed girder or beam often used in the framework of aerial vehicles; a compound longitudinal structural support consisting of two horizontal bars connected by vertical and diagonal bars crost so as to resemble lattice=work.

launch leints tr. cause to move or slide into the air; start

in flight; stort; send off: as, *launching a kite.

launching-apparatus 'lc:n-tsin-æpə,zee-təs n. an apparatus with or from which to launch an aerodrome or flyingsmachine; a launchingsmechanism; a stortingsmechanism.

launching-derrick 'ic:n-tsin,dezik n. a derrick or catapult used in launching a flying-machine: a storting-derrick: a

pylon.

launching-device 'lc:n-tʃɪŋ-dɪ,vaɪs n. a device or apparatus used for launching a flying-machine; a launching-mechanism; a starting-device.

launching-ground 'ic:n-tsin,ground n. a ground or field from which flying-machines may be launcht into the air or

started in flight.

launching-mechanism '1c:n-tʃɪŋ,mɛkə-nɪzəm n. a mɛchanɪsm with or from which to launch an aerodrome or flyingmachine; a launching-apparatus; a launching-device; a storting-apparatus.

launching-platform '1c:n-tsin,præt-fo:zm n. a platform, as on the deck of a water-ship, from which flying-machines

may be launcht into the air or storted in flight.

launching-rail 'lc:n-tsin, zeel n. a rail or continuous bar,

as of wood, along which a flying-machine is run in launching it into the air; a monorail launching-track.

launching-scow 'lc:n-tsin,skoo n. a scow or large flatsbettomd boat used as a launchingsplatform for a flyer.

launching-staff 'ic:n-tsu, sta:f n. a staff used for launching an experimental aerofoil into the air. It consists of a staaight rod a few feet in length, capt with a small rectangular platen on which the aerofoil is carried; a launching stick.

launching-stick 'ic:n-t/inj,stik n. a stick or stick-like device for launching an experimental aeroplane or aerofoil into

the air; a launching staff.

launching-track 'ic:n-tsin,tgæk n. a tgack or railway along which a flying-machine is run in launching it into the air.

launching-vehicle 'ic:n-tsin,vii-i-koi n. a vehicle, such as an automobile or a boat, upon which a flying-machine may be mounted and moved along so as to launch it into the air.

law lc: n. a principle or preposition which expresses the constant or regular order of certain fenomena; a general formula or rule to which all things or events of a given class tend to conform.

Allen's law, the normal law of skin-friction as stated by

H. S. Allen.

Ferrel's law, the law or principle, as formulated by William Ferrel in 1854, that a body moving in any direction along the surface of the earth is deflected toward the right in the northern hemisfere and toward the left in the southern hemisfere by an amount which varies directly as the velocity of the body and as the sine of the latitude.

Galton's anticyclonic law, see under anticyclonic.

Langley's law, the law or principle that (under certain conditions) the power required to propel an aeroplane

diminishes indefinitly as the speed increases.

law of Avanzini, the law or principle that as the speed of an inclined or oblique plane moving thru a fluid increases, and as the angle of incidence becomes less, the center of

pressure moves toward the rear of the plane.

law of slip, the law to which the slip of a propeller or other solid body which is moving thru a fluid conforms; the principle that, at low pressures, the relative motion of a gas along a solid surface is the same as tho the solid surface were removed to a distance equal to twice the mean free path of the gaseous particles and were replaced by a layer of gas at rest.

law of storms, the law or principle that the distance of

the center of a hurricane or other such storm from any given point has a certain rough relation to the average rate at which the barometric pressure is falling.

Maxwell's law of viscosities, the law or principle that the

viscosity of a gas is independent of its pressure.

sine law, same meaning as sine-square law.

sine-squared law, same meaning as sine-square law,

sinesquare law, the law or principle stated by Isaac Newton, that in a (Newtonian) fluid the resistance to a moving solid surface varies directly as the square of the sine of the angle of incidence; the sine squared law; the sine law.

leaden 'ledn adi. [also spelt leden] having the color of led;

dull-colord; gloomy: as, a *leden sky.

leading-angle 'hii-din, angel n. the angle of a wing or other aerofoil which is in leading or forward position; the angle of the leading or advancing edge; the angle of entry: the epposit of trailingsanale.

leakage 'hi-kida n, the action of leaking: gradual escape of inflatingsgas, as thru a hole or erifis in a balloonsenvelop.

lee hi n, the shelterd side of an airship, the land, an eminence, or other object; the side turnd away from the wind. lee shore, the shore or coast on the lee side of the ship: the shore toward or against which the wind blows: the leeward shore.

leeward 'hi-word adv. toward the lee or side which is turnd

away from the wind; toward the shelterd side; opposed to zeindzward.

leeward 'lii-word adj. away from the wind; furthest from the point toward which the wind blows: the opposit of zeindzeard.

leeward 'lii-word n. the part or side which is shelterd from

the wind; the shelterd side; the lee.

leewardly 'lri-wəz-dli adj. (nautical) apt to fall to leeward:

opposed to weatherly.

leg leg n. a run made (by a water-ship) on a single tack; a flight made in a single direction or over a single division or section of the whole course.

leonid 'hi-a-nid n. a falling stor or meteor which appears

to issue or hail from the constellation Leo.

lepidopter ,lepr'doptoz n. any insect of the order lepideptera.

lepidoptera lepi'dopto-zo n. pl. a large order of insects comprizing the butterflies and moths, characterized by having four membranous wings coverd with scales; the scalys wingd insects.

lever-arm 'fri-vəz, a:m n. the arm which connects one of the controlling-levers, as in a Wright biplane, with the corresponding lever-crank in the had-piece of the machine.

lever-crank 'lii-vəz,ksænk n. the crank or short rotating bur, as in the hed-piece of a Wright biplane, which is connected (by means of the corresponding lever-urm) with one of the controlling-levers.

levitation levi'tse-son n. the action or process of rising in virtue of lightness or buoyancy: the opposit of gravitation.

lifeboat 'larf,boot n. a boat specially constructed for lifes saving, as one attacht to an airship at sea, to be used in case of downfall.

lifebuoy 'laif,bou-i n. a life-preserver; a life-belt.

life-kite 'larf,kart n. a kite flown from a vessel wreckt on a lee shore for the purpose of sending a life-saving line to the shore.

life-preserver 'larf-psr,zb:z-vəz n. a lifebuoy; a life-belt.

life-saving 'lanf, see-vin adj. organized for or devoted to saving life at sea: as, *life-saving servis.

lift lift n. (obsolete) the sky; the upper regions; the atmosfere; the air.

lift lift v.

1. tr. raise into the air; cause to rise; elevate.

2. intr. rise into the air; begin to glide or fly into the air; leave the earth in flight, as an aeroplane flying-machine

does just after the get-off.

lift hit n. the action or mode of lifting in or into the air; a rising, a raising; elevation; tendency to lift or rise, as of a balloon; lifting-power; specifically, the force with which a fluid, as the air, presses vertically upon an aerofoil, aeroplane, kite, or airship; the vertical component of the air-pressure upon an airship; the vertical component of the poll on a kite-stging.

2. a going up, as of a passenger in a balloon; an ascent

into or thru the air; an airstgip.

lifter 'lifter n. something which lifts or is used in lifting or raising; as, both surfaces act as *lifters.

lifting-capacity 'hiftin-ka,pæsi-ti n. capacity or ability to lift or raise or rise into the air; liftingspower.

lifting-effect 'liftin-i, fekt n. the effekt or result of lifting or raising; raising effect.

lifting-force 'liftin, force applicable to or tending to lift; lifting-power.

lifting-power liftin, pou-sz n. power or capacity to lift or raise (an aeroplane or airship) in the air; lifting-force;

lifting=capacity: as, the *lifting=power of gas; the *lifting=

powers of het air.

lifting-propeller 'liftin-pso,pelez n. a propeller of an airship whose function is to lift or raise the airship in the air; a lifting-screw; a vertical screw.

lifting-screw 'Inftin, sksou n. a revolving screw designed for lifting an airship; a gyrating helical aerofoil for raising a flying-machine into or thru the air; a lifting-propeller.

lifting-test 'Infun, test in. a test or trial of the liftingpowers of a helicopter or other mechanism.

lifting-wheel 'liftin, will n. a wheel or screw used to lift or

raise an air-machine; a lifting-screw.

lighter-than-air lan-təz-də'ne:z, (assumptivly) 'lan-təz-də-,ne:z adj. possessing less weight in proportion to bulk than the air or atmosfere; of less specific gravity than the air; said of balloons or dirigibles which depend upon gases lighter than the air, or upon rarified air or a vacuum for sustaining-power: the epposit of heavier-than-air.

lightning 'last-nrn n. the visible discharge of electricity between one group of clouds and another or between the

clouds and the ground.

ball lightning, lightning in the form of a slowly moving ball of fire which finally explodes, sometimes seen in hevy downpours of rain, and consisting of incandescent rarified air and gas.

chained lightning, same meaning as chain lightning.

chain lightning, lightning which assumes the form of a zigzag or broken line; forkt lightning.

forkt lightning, zigzag lightning; chain lightning.

sheet lightning, lightning in which a wide surface is illuminated at once, as summer-lightning or heat-lightning.

summer lightning, see summer-lightning.

lightning-flash 'last-nin, flæs n. a flash or flame of light-

ning

lightning-recorder 'last-nsn-zs,ke:z-dəz n. a modification of a wireless-telegraf instrument which records or indicates the presence of distant lightning.

limbat 'lim,bæt n. a cool northwest wind in the island of

Cyprus.

line-storm 'laın, ste:zm n. an equinoxial storm.

list list intr. careen, heel, or incline to one side, as an airship in flight: as, initial *list; augmented *list.

listing-moment 'Instru, moo-ment n. the moment or effect of listing. see list.

load-grading 'lood,gzee-din n. the grading (or rate of variation or change) of a variable load or normal pressure, as

along the length of an aerial screw-propeller blade, compare thrust-grading and linear grading.

load-value 'lood, vælio n. the value or amount of the load or normal external pressure, as upon the blade of a propeller.

locomotion ,loke'moo-sen n. motion from place to place; the action or power to move from one place to another; progressiv movement.

lofty 'le:f-tr adj. very high in air; extending to or existing at great elevations; taking place or occurring at great altitudes: as, his *lefty car; birds of *lefty wing.

log-book 'log,bok n. a book in which the particulars of a

balloonstrip or airshipsflight are enterd or kept.

longitude 'lond31,tçud n. distance east or west mesured in degrees along the parallel of latitude vertically below the observer on the surface of the earth, especially the angular distance (of the plane of the meridian of any point, place, or position on or above the earth's surface) east or west from the plane of some standard meridian (such as that of Greenwich, England).

loom foum n. same meaning as looming.

looming 'lou-min n. a form of mirage in which a distant object, as a ship at sea, appears abnormally elevated, and often inverted and vertically magnified.

low too n. an area of low barometric pressure, bounded by

an isobar; a cyclone.

low-flying 'loo, frai-in adj. habitually flying low or near the ground; used to flight at small altitudes.

low-hanging 'loo,hænin adj. hanging low; suspended at a

relativly small altitude: as, *low-hanging clouds.

low-lying 'loo,lai-in adj. lying low; located at a relatively small altitude above the earth's surface: as, *low-lying fogs and clouds.

loxodrome 'leksa, drom n. a line on a sferical or sferoidal surface (as the earth) which cuts the meridians at a con-

stant angle; a lexodremic spiral; a rhumb-line.

lozenge lozinda n. a plane figure, form, or shape, having four equal straight sides and two obtuse angles, as of certain kites; an oblique equilateral parallelogram; a diamond-

shaped plane figure.

Inbrication ,liubzi'kεε-∫ən n. the act of lubricating; the process of making smooth or slippery the joints of the engin or drivingsmechanism of an airship, as by means of oil, for the purpose of diminishing friction; also, the state or condition of being lubricated.

forced lubrication, lubrication by means of oil which is

forced into the bearings; lubrication by oil which is furnish to the bearings under pressure.

gravity lubrication, lubrication by means of oil which is caused to flow into the bearings by the force of gravity.

splash lubrication, lubrication of an engin by means of a splash of oil brought about by enclosing the crank and connecting rod in a case fild with oil to a certain level such that the crank dips into it and spatters the oil upward over the appropriate surfaces.

machine mə'sin n. a structure or vehicle; an apparatus for applying or converting power; specifically, an air-machine; a flying-machine.

altitude machine, a flying-machine designed for attaining great altitudes; an air-machine adapted to high-flying.

endurance machine, a flying-machine designed for great endurance; an air-machine adapted to making continuous flights of long duration.

passenger-carrying machine, a flying-machine designed for carrying passengers; an air-machine adapted to transporting other persons besides the aviator himself.

speed machine, a flyingsmachine designed for attaining

great speed; an air-machine adapted to swift flight.

weightslifting machine, a flying-machine designed for lifting and carrying great weight; an air-machine of great lifting-capacity; a weight-carrier.

mackerel-sky 'mækəzət,skar n. a sky dappled with small white fleecy clouds resembling the morkings of a mackerel; a mackerel sky; cirro-cumulus; spotted alto-stratus.

main-line 'meen, lain n. the principal line or string of a

kite; the main kite-line. compare pennant-line.

main-plane 'meen, pleen n. one of the main or principal supporting planes or aerofoils in an aeroplane flying machine.

"mammato-cirrus ma, mee-to'sizas n. a rounded festoons shaped cloud related to cirrus.

mammato-cumulus mə,mee-tə/kçumju-ləs n. cloud consisting of protuberances on the under side of an otherwise flat>bottomd cloud.

man-bearing 'n.æn,be:-zin adj. bearing aloft, or carrying, a man; man=lifting: as, a *man=bearing kite.

man-bird 'mæn,be:zd n. [also spelt manbird]

1. [ploral man-birds] an artificial bird or flyer operated

by a man or human being; a man-carrying flying-machine,

by an aeroplane.

2. [ploral man-birds, men-birds] a bird-like man; a man likend to a bird on account of his power to fly; a birdman: as, the *man-bird profession.

manflight 'mæn,frait n. [also spelt man-flight]

1. the flight of man, or the power of man to fly thru the air, as in a glider or aeroplane; human flight; artificial or mechanical flight.

2. an instance of this power; a flight made by a man.

manhole 'mæn,hool n. the neck of a balloon.

man-lifting 'mæn,liftin n. the action of lifting or raising a man or men into the air.

man-lifting 'mæn,liftin adj. capable of lifting a man, as a

kite; manscarrying.

manned mænd adj. [also spelt mand] provided with a man or operator; furnisht with an aviator or aeronaut: as, a *mand balloon: the opposit of unmanned.

manoeuvering-plane mə'njou-və-zıŋ,pızen n. a plane or aerocurv used for manoeuvering or managing a dirigible

balloon; a governing-plane.

manometer mə'nomi-təz n. an instrument for determining the elastic pressure of the air and other fluids: as, an open-air *manometer; a comprest-air *manometer; a statical *manometer.

man-propelled 'mæn-pso,peld adj. [also spelt man-propeld]
propeld or driven by man power, as a flying-machine.

mantle 'mæntl n. the covering or envelop of the gasbag of a balloon.

man-vessel 'mæn,vesəl n. the cor or basket of a balloon or

airship: distinguisht from gas-vessel.

map mæp n. a representation of the earth's surface or any part of it, or of the hevens, on a flat surface, as of paper, according to a definit scale and system of projection; a chart: as, an aeronautical *map of Europe.

mare's-tails 'me:zz,teelz n. pl. long straight tail-like strands of cirrus cloud, sometimes considerd as indicating the ap-

proach of stormy wether; horsetail.

marline 'ma:z-lin n. small two-strand line, used by sailors for seizings, and also sometimes used in kite-making.

mass-center 'mass, senter n. [also spelt mass-centre] the center of mass, as of a flying projectil: identical in position with the center of gravity. see under center.

mast mast n. a tall upright pole or red forming part of a flying-machine, held in position by truss-wires and serving

in the control of rudders, etc.

mattress 'mætgəs n. a mattress-like arrangement attacht to

the netting of some balloons.

May-earp 'mee,ka:pp n. a hollow Japanese fish shaped bag kite deckt out so as to resemble a carp, hoisted on the tops of houses on May 5th if the father of the family has been presented with a son during the preceding year.

mean mrin adj. forming an average between two or more terms; average: as, *mean winds, *mean temperature.

megaphone 'mega, fon n. [also spelt megafone] an instrument consisting of two funnels and flexible ear-tubes, devised by T. A. Edison for enabling speech and other sounds to be heard at a distance; also, a large speaking-trumpet.

meridian mr'zrdi-on n. the great circle of the earth which passes thru a given place or point and the axis of rotation of the earth, or the north and south poles; also, that half of this circle which extends from pole to pole thru a given place or point.

mesh mes n. one of the open spaces or interstices of a bal-

loon=net, between the adjacent knots.

meteor 'mii-ti-se n. any atmosferic fenomenon; specifically, a transient firey or luminous body seen at night in the atmosfere or sky; a shooting-stor; a falling-stor.

meteor-cloud 'mri-ti-əz,kraod n. the cloud-like train or streak left by a meteor or shooting-star in its course thru the upper air or sky; a meteor-train.

meteoric ,miti'ezrk adj. of the region of midair; of the atmosfere; atmosferical; meteorological; of meteors.

meteorograph, miti'ezə,gza:f n. [also spelt meteorograf] an apparatus for automatically recording several different kinds of meteorologic fenomena at the same time.

aerial meteorograph, a light form of meteorograf used on

kites and soundingsballoons.

meteorologic ,miti-əzə'lədzik adj. pertaining to or connected with meteorology; meteorological.

meteorological ,miti-əzə'lod31-kəl adj. same meaning as meteorologic.

meteorological chart, a chart or map on which meteorological fenomena are represented; a wethersmap.

meteorological equator, see under equator.

meteorological photography, fotografy as applied to meteorological record-making or other work; fotografy of meteorological fenomena.

meteorologically ,miti-əzə'lədʒikə-li adj. in a meteorological manner; by means of, or with respect to, meteorology. meteorologist ,miti-ə'zələ-dʒist n. one skild in meteorology. meteorology ,miti-ə'zələ-dʒi n. the science of the atmosfere.

cosmical meteorology, meteorology as related to cosmical fenomena; the science of the earth's atmosferic fenomena as modified by or medifying the rest of the material universe.

dynamic meteorology, meteorology from the point of view of dynamics: the science of the forces which produce the

movements of the atmosfere.

statical meteorology, meteorology from the point of view of statics; the science of the statical fenomena of the earth's atmosfere; the study of the atmosfere at rest.

meteorometer ,miti-ə'zomī-təz n. an instrument for mesuring meteors or for receiving and transmitting information as to the amount of rainfall, air-pressure, wind, etc.

meteoroscope ,miti'eze,skop n. an instrument for observing

meteors: a meteorscope.

meteor-train 'mii-ti-əz,treen n. the cloud-like train or streak left by a meteor or shooting-stor in its course thru

the upper air or sky; a meteorscloud.

microphotograph ,mar-ksə'fotə,gza:f n. [also spelt microfotograf] a microscopic reduction or miniature fotograf, as of a map or written message, sometimes used in ballooning, in place of an ordinary map, or for transport by carriers pigeons.

microphotoscope ,mai-ksə'fotə,skop n. [also spelt microfotoscope] a magnifying-device for reading microfotografs.
midair 'mid,e:z, ,mid'e:z n. [also spelt mid=air] the middle
region of the air; the tract or zone between the clouds and

the part of the atmosfere near the ground.

midair 'mıd,e:z adj. [also spelt midzair] of, pertaining to, or produced in, midair.

midflight 'mid,frait n. the midst of a flight: as, he was

halted in *midflight by the failure of his motor.

midrib 'midzib n. the middle or principal rib or stick in the frame of a kite.

mid-section 'mid, sek \ on n. a section thru the middle part.
mid-zone 'mid, zoon n. the zone or region in the middle, or

at the equator, of the gasbag of a balloon.

mile-high 'mart, har adj. situated or floating at a height or

altitude of a mile from the ground-surface.

milky way ,milki'wee n. the whitish or luminous cloudlike storry streaks and sheets visible in the sky at night and forming a belt girdling the entire hevens; the galaxy.

mirage mr'zo:3 n. an optical illusion due to refraction or bending of light-rays in traversing air-layers of different densities, common in hot sandy deserts and occurring sometimes at sea, in which distorted, displaced, or inverted images of distant objects are seen and often taken (when below the horizon) for real objects reflected in a body of water.

inferior mirage, a mirage located below the horizon; an illusory appearance as of a bedy of water at some distance

with trees or other objects reflected in it.

superior mirage, a mirage located above the horizon; the appearance in the sky of an inverted image, as of a ship which is really on the sea below the horizon.

mist mist n. a cloud consisting of an aggregation of minute globules of water and resting on or near the ground; fog; also, a precipitation of closely aggregated and very fine droplets, intermediate between fog and rain.

mist-cloud 'mist,kzaud n. [also spelt mist cloud] a low cloud composed of mist or feg.

mist-foam 'mist, foom n. (poetical) mist considered as foam, as when beating upon an airship in flight; foam-like mist.

mistral 'mistgəl n. a cold northwest wind in the Mediterranean provinces of France and neighboring districts.

misty 'mistr adj. characterized by mist; coverd or obscurd by mist; consisting of mist.

mock-moon 'mek, moun n. a paraselene.

mock-sun 'mek,san n. a parhelion.

model 'modi n.

1. a representation in three dimensions showing the details of the structure or working of a flying-machine or other mechanism: as, a working *medel.

2. a type of design or structure, as of a flying-machine; style of structure; pattern, bild, make: as, the Herring-

Chanute *model; the firm's 1911 *model.

moisture-laden 'mois-tsparkee-dn adj. laden or freighted with moisture or dampness: as, a *moisture-laden wind.

moisture-proof 'meis-tsəz,psouf adj. proof against meis-

ture or dampness; damp=proof.

moment 'moo-mont n. an effect; a function serving as the mesure of some mechanical effect the quantity of which depends on different factors: as, center of *moments; *moment of friction.

momentum mo'mentəm n. [ploral momenta] the product of the mass and velocity of a moving body; the quantity of motion of a body: as, angular *momentum, negativ *momentum.

principle of no momentum, the principle that when a bedy moving thru an incompressible fluid containd in a

fixt enclosure experiences resistance to its motion, the body imports no momentum to the fluid.

monoplane 'mono, pleen n. a single-plane flying-machine; a flying- or gliding-machine having commonly but one main sustaining-plane (at least on either side of its central body), or (if it have two or more main sustaining-planes), having the sustaining-planes which are located on either side of its central body disposed in one geometric plane; an aeroplane flying-machine without superposed sustaining-planes: contrasted with biplane, triplane, multiplane, etc.

double monoplane, a monoplane having two sustainingplanes, placed one after the other; a tandem monoplane

having two sustainingsurfaces.

tandem monoplane, a monoplane which has separate sustainingsplanes placed tandem, or one after the other, as in a double monoplane, see tandem.

monoplane 'mono,preen adj. resembling or having the characteristics or nature of a monoplane; single-plane; one-plane; flat; as, a *monoplane tail.

monoplane-flight 'mono-preen, frait n. a flight made by

or in a monoplane.

monoplanist 'mono, plee-nist n. one who uses monoplanes;

an aviator who drives monoplanes.

monsoon ,men'soun n. a seasonal wind prevailing in southern Asia and the Indian Ocean, which from April to October blows from the southwest and from October to April from the northeast.

dry monsoon, same meaning as winter monsoon.

rainy monsoon, the southwest mensoon, occurring in summer and commonly accompanied by hevy and continuous rainfall; the wet mensoon; the summer mensoon.

summer monsoon, same meaning as rainy monsoon.
wet monsoon, same meaning as rainy monsoon.

winter monsoon, the northeast monsoon, occurring in

winter; the dry monsoon.

montgolfier ,mont'golfi-oz n. [also spelt montgolfiere, montgolfière] a balloon of the kind invented by the brothers J. M. and J. E. Montgolfier of Annonay (Ardèche), France, in 1783, raised by heated air; a hotsair balloon; a firesballoon; a Montgolfier balloon.

moonlight 'moun, last n. the light of the moon; moonshine.
mooring 'mo:-zin n. something by which an airship or balloon is made fast to earth, or the object to which it is
moored or made fast.

moth mo:θ n. any lepidopterous insect of the suborder heterocera, which resemble the butterflies (rhopalocera) but are

- distinguishable from them by their (usually) necturnal habit and non-clubd antennae.
- motor 'moo-tez n. an apparatus or mechanism for moving machinery or vehicles of locomotion; a motory engin: sometimes distinguisht from steamsengine.
- motor-airship 'moo-təz,e:z-ʃip n. an airship or aerial vehicle propeld by a motor; a powersdriven airship.
- motor-balloon 'moo-təz-bə,toun n. a balloon propeld by a motor; a motorsdriven balloon.
- motor-driven 'moo-təz,drivən adj. driven or propeld by a motor: as, a *motor>driven kite; a *motor>driven flyer.
- motorless 'moo-təz-ləs adj. having no motor; without a motor: as, a *motorless soaring-machine.
- motor-propelled 'moo-tee-pse, peld adj. [also spelt motors propeld] propeld by a motor, as a kite or airship; motors driven.
- motory 'moo-to-zi adj. related to or causing motion; kinstic.
- mount mount intr. go up; ascend; rise; make an ascension.
 mountain-breeze 'moun-trn,briz n. same meaning as
 mountain-wind.
- mountain-sickness 'moun-tin,siknis n. a sickness or malady caused by breathing the rarefied air of mountainheights, or to ascending or descending rapidly at considerable altitudes.
- mountain-wind 'moon-tin, wind n. a very regular wind normally blowing up a mountain by day and down by night, due to the heat of the inclined surface of the mountain; a mountain preeze.
- mounting 'mounting n, the mode in which a flying-machine is mounted or set up, as upon skids or wheels, or both.
- mouth mand n, the erriss or opening at the lower end of the nack of the gasbag of a balloon.
- muffler 'mafrez n. a device to muffle, deden, or silence the explosiv puff of the exhaust of het gases from an internal combustion motor; an exhaust muffler; a silencer.
- multiplane 'malti,pleen n. a flying-machine with several or many sustaining-planes, especially many superposed sustaining-planes; a multiple-wingd aeroplane flying-machine: distinguisht from monoplane and biplane.
- multiplane 'malti,pieen adj. having several or many planes or aeroplanes; a polyplane.
- multiple-wing ,maltipəl'win adj. having several wings; having more than one or two wings; multiple-wingd: said of gliders or flying-machines; multiple-wingd.

multiple-winged 'maltipol, wind adj. [also spelt multiple: wingd] same meaning as multiple: wing.

multiply 'maltr-pl: adv. in a multiple manner; in a manifold way; by many paths: as, a multiply-connected region of fluid-fild space.

murky 'mszki adj. dark, obscure, gloomy.

muslin 'mazim n. any one of several kinds of fine cetton cloth, sometimes used in making aerial apparatus.

nacelle ,ne'sel, ,næ'sel n. the cor of a balloon; the framework or body of a dirigible balloon or other airship; the body=frame; the fuselage.

nadir 'nee-dəz n. the point directly underneath the observer; the point opposit to the zenith.

nainsook 'neen,sok, 'neen-sok n. a cotton fabric, a kind of muslin or jaconet of East Indian origin, sometimes used in making kites.

nausea 'nc:-50 n. a feeling of sickness with inclination to vomit: seasickness.

navigable 'næviga-bal adj.

1. admitting of being navigated; affording passage for airships; said of the air or atmosfere.

2. capable of being navigated or guided; steerable; dirigible: as, a *navigable balloon.

navigate 'nævi, get v.

1. tr. sail or drive: as, to *navigate a balloon.

2. tr. sail in or thru: as, to *navigate the air.

3. intr. sail or travel thru the air or atmosfere.

navigating-level 'nævi-getin, level n. a horizontal tract or level, in the atmosfere, which is adapted for aerial navigating or sailing: as, the inversion *navigating-level.

navigation ,nævi'gee-Son n. the action of navigating; the practis or ort of passing or traveling thru the air; airs sailing.

aerial navigation, see under aerial.

navigator 'nævi,getəz n. one who navigates; a pilot or one of the crew of an airship or flyer; an airsailor; an aeronaut.

near-ground 'n::z,gzoond adj. taking place near the ground; conducted at a low altitude above the landssurface; close to the ground: as, *nearsground flights.

neck nek n. the narrow or constricted part at the lower end

of the gasbag of a balloon, thru which the inflating-gas is introduced, and which is often left open while voyaging; the tail.

open neck, the neck of a balloon as left open or unclosed, as is sometimes the case when incomplete inflation of the gasbag is employd: as, the *open=neck scheme.

neck-pipe 'nek.paip n, a pipe or tube fitted into the neck of

a balloon.

needle-hole 'nii-dl,hool n. one of the holes in a balloons envelop or gasbag, made by the needle in sewing the gores together.

negotiate ni'goo-si,et tr. manage, handle: as, to *negotiate

a cury: *negotiating air currents.

neon 'nii.on n. an elementary gas, a constituent of the atmosfere, discoverd by Ramsay about 1808.

neossoptile .ni-ə'soptil n. [also spelt neossoptil] one of the soft fethers of a newly hatcht bird, as contrasted with a fether of a mature type.

nephological ,nefə'ledzi-kəl adj. [also spelt nefological] pertaining to nefology; relating to clouds or cloudiness.

nephologist nr'fela-daist n. [also spelt nefologist] one skild in nefelogy; a student of the clouds.

nephology nr'folo-dar n. Talso spelt nefologyl the science

of the clouds; cloud-study.

nephoscope 'nefo, skop n. [also spelt nefoscope] an instrument for observing cloud-motion and determining the altitude of clouds and the velocity and direction of their movement.

Abbe's marine nephoscope, a nefoscope designed for ob-

serving the motions of the clouds at sea.

Aime's nephoscope, a nefoscope for showing the altitude of the clouds; a reflecting anemometer.

Besson's zenithal nephoscope, a nefoscope especially

adapted for observations near the zenith.

vanishing=point nephoscope, a nefoscope designed for quickly observing the vanishingspoint and radiationspoint for the motion of clouds which are moving in parallel directions.

nephoscopie ,nefo'skepik adj. [also spelt nefoscopic] of, or made by means of, the nefoscope: as., *nefoscopic observations.

nephoscopist nr'foska-pist n. [also spelt nefoscopist] a

student of nefoscopy; a nefologist. nephoscopy ni'foska-pi n. [also spelt nefoscopy] scientific observation of the clouds; nefology.

nervulet 'ng:z-vio-let n. a little nervure, in an insect's wing.

- nervure 'ns:z,vioz n. one of the slander hollow tubes forming the framework of an insect's wing.
- net net n. the open-work fabric made of cord forming coarse meshes, used for enclosing and confining the gasbag of a balloon or airship; the network; the netting.
- net-cord 'net,ke:zd n. one of the cords attacht to the net or network of a balloon and connecting it to the concentrating-hoop or ring below; a net-rope.
- net-rope 'net,zoop n. a rope of the net of a balloon; one of the ropes attacht to the network or netting of a balloon and connecting it to the concentrating-hoop or ring below; a net-cord.
- netted-winged 'netted, wind adj. [also spelt netted-wingd] having reticulated wings; characterized by conspicuous neuration of the wings; neuropterous; neuropteral.
- netting 'nstrn n. the net of a balloon; the network spred over the envelop of a non-rigid balloon in order to preserv the form of the gasbag and distribute the load of the car and cargo; the net.
 - netting-hoop 'netin, houp n. the concentrating ring of a sferical balloon.

network 'net.we:zk n.

- 1. the net of a balloon, made of cord or twine; the net-
- 2. a piece of work or a structure having the form or construction of, or resembling, a net or netting: as, the *network of an insect's wing.
- neuropter ,njo'zoptoz n. an insect of the order neuroptera; a neuropterous or netted-wingd insect.
- neuroptera ,njo'zeptə-zə n. pl. an erder of insects including the flies, having four naked membranous transparent wings, with reticulate neuration; the netted-wingd insects.
- night nait n. the time when there is no sunlight; the interval between the rising and the setting of the sun.
- night-breeze 'nait, beziz n. a breeze or light wind which blows in the night. compare day-breeze.
- night-cloud 'nart, keaud n. cloud of night; stratus cloud; fall-cloud.
- night-dew 'nart, djou n. dew which is formd in the night.
- night-flying 'nart, flai-in adj. flying habitually in the night, as the bats.
- nimbi 'nım,bar n. pl. see nimbus.
- nimbus 'nimbas n. [ploral nimbi] a dense cloud spreding out into a crown of cirrus and passing beneath into a shower; rain-cloud.

nimbus-like 'nimbos.laik adi. like nimbus; resembling nimbus cloud.

nocturnal .nek'tezni adi, of the night; done or occurring at night: activ during the night: as, a *nocturnal ascent.

non-dirigible non'dizida-bal adj. not dirigible; incapable of being steerd: as, a *non-dirigible balloon.

non-gasproof non'gas, psouf adj. not gasproof: said of

balloon fabrics.

non-lifting nen'liftin adj. incapable of lifting or of raising weight; said of balloons in which the ascensional force and the weight balance each other at the ground level, so that there is no tendency to rise spentaneously.

non-rigid ,non'zidaid adj. not having a rigid frame; not rigid; flexible: as, a *non-rigid balloon; a *non-rigid pro-

peller. compare semi-rigid.

non-soaring nen'so:-zin adi, that does not soar; incapable

of soaring.

non-spherical .nen'sfezi-keł adi. [also spelt nonesferical] not of a sferical or globular shape; elongated, as a crogra shaped balloon.

non-stop 'non, stop adj. made without stops; no stop: as, a

*nonesten flight.

norther 'no:z-doz n. a northerly wind, especially a strong north wind accompanied by intense cold, occurring in autumn and winter in the region of Missouri, Texas, the Gulf of Mexico, and Florida.

northern 'no:z-dəzn adi.

northern lights, the aurora borealis.

northwester ,no:zθ'westez n. a wind or gale blowing from

the northwest; a nor'wester.

nor'wester ,nez'westez n. a wind or gale blowing from the northwest; a northwester; also, a southerly wind in New Zealand, of the same nature as the pampero of South America, and corresponding to the norther of the northern hemisfere; the southerly buster.

nose nooz n. the foresend or projecting front part of a dirigible balloon or airship or of any part thereof; the equa-

lizer or front rudder of an aeroplane flyer.

nose-on 'nooz, on adj. occurring with the nose or front projecting part of the machine directed toward or hitting against the ground or other obstacle: as, a *nose-on crash.

nose-on ,nooz'en adv. with the nose or front projecting part directed against the obstacle: as, the aeroplane struck the ground *nose=on.

no-stop 'noo, stop adj. executed or carried on without stops;

nen-step: as, a *no-step flight.

obscuration ,obskço'zee-Şən n. the act of obscuring or darkening; the state of being obscured: as, the obscuration of the moon in an eclipse; specifically, in meteorology, the darkening or hiding of the sun by clouds; cloudiness.

observation-kite ,obzəz'vee-Şən,kait n. a manəlifting kite used in warfare for purposes of observation or reconnais-

sance; a war-kite.

observer ab'zm:z-vaz n. a soldier or other person whose business is to observ the enemy from an airship; one who makes a reconnaissance while riding in a balloon or aeroplane.

observing-board əb'zB:z-vin,bo:zd n. a board or board-like structure sometimes used in balloons in connection with the

making of observations.

observing-station əb'zb:z-vin,stee-sən n. a station where meteorological observations are made; a wether-station.

obstacle 'ebstə-kəl n. any hindrance or obstruction to the

motion of air or other fluid, as an aerofeil.

ocellus o'seles n. one of the eye-like spots in the tail-fethers of a peaceck or in the wing of an orque-fesant; an eye-spot.

oil-silk 'oil,silk n. silk cloth impregnated with boild oil, semitgansparent, waterproof, and gasproof, used in making

balloonsenvelops or gasbags; eild silk.

oilskin 'oil,skin n. cloth made gasproof or waterproof by treatment with oil, often used in making balloons and other aircraft; cotton, silk, or linen fabric prepared with oil so as to be impermeable.

one-man 'wan,mæn adj. perfermd by one man only: as, a

*one-man exhibition flight.

operating-wire 'opo-zetin, waiz n. a wire, in a flying-machine, used in operating the rudder; a rudder-operating wire.

orbit 'e:z-bit n. a track, course, or circuit; a circular or elliptical path; the orbit-like oval flight-path of a bird soaring against the wind: as, the form of *orbit in dynamic soaring.

Ferrel's orbit theory, a theory advanced by Ferrel attributing the growth of hailstones to their motion in loop-like orbits or paths in and out of the air-strata where rain or ice is forming.

orbital 'e:z-Dr-tl adj. taking place in an orbit; of revolution.
orbit-motion 'e:z-bit,moo-son n. motion in an orbit; movement along a path, as a circle or ellipse, which returns

upon itself.

ornithopter , σεπι'θορτος n. [also spelt ornithoptère] a birds wing flyingsmachine; a heviersthansair aerial vehicle designed to fly by means of flapping or oscillating wings, after the manner common among birds: distinguisht from helicopter and aeroplane. compare orthopter.

ornithopterous ,ozni'0opta-zas adj. having wings or fores

lims like those of a bird; bird-wingd.

orthogonal, oz'θogo-nł adj. pertaining to or characterized by right angles; right=angled; characterized by rising or appearing to rise vertically from the ground, as the sparrow is sometimes supposed to do: as, an *orthogonal flyer.

orthogonal flight, a supposed mode of bird-flight in which

the creature rises vertically from the ground.

orthogonal theory, the theory or notion that certain birds can, by flapping their wings, rise vertically from the ground in flight.

orthopter oz'doptez n.

1. an insect of the order orthoptera; a straight-wingd in-

sect; an orthopteran or orthopteron.

2. a straight-wingd flying-machine, usually or always dependent upon the flapping-wing idea and thus often confused with ornithopter.

orthoptera ,oz'θopto-zo n. pl. an order of insects comprizing cockroaches, walkingsticks, crickets, and grasshoppers, having coriaceous and usually straight and narrow foreswings, broad longitudinally folded hindswings and incomplete metamorfosis.

orthopterous , σz'θορτο-zos adj. having straight wings; straight-wingd; of the nature of an orthopter.

outfly ,aut'flas tr. [past participle outflown; preterit outflew] outdo or excel in flight.

outride ,aut'zaid tr. ride out, or survive the violence of (a storm).

outrigger 'out,zigəz n. any framework, structure, or part, rigged up outside the main or usual limits of a structure, especially a moving structure such as a ship, wagon, or flying-machine, for stedying, strengthening, or other purpose; the projecting framework supporting a tail-plane, rudder, or control: as. an estrich's wings are used as *outriggers to aid in running; the front and rear *outriggers of a Curtiss biplane.

front outrigger, the outrigger at the front or fore part of an aeroplane flying-machine, carrying the hed-piece or

front rudder.

rear outrigger, the outrigger at the rear or hind part of an aeroplane flying-machine, carrying the tail-piece, etc.

outrigger-joint 'aut-zigoz,d50int n. the joint or junction of one of the outriggers of an aeroplane flying-machine, as with a spar of one of the main-planes.

outrigger-member 'qot-zigəz,membəz n. a structural member or purt of an outrigger of an aeroplane flyingsmachine. outrigger-wheel 'qot-zigəz,wiil n. a wheel attacht to the

outrigger of a flying-machine.

outspread ,aut'spsed, (assumptivly) 'aut,spsed adj. [also spelt outspred] spred out, as the wings; outstretcht; extended.

outstretch , dot'strets ir. stretch out; spred: as, like a giquantic bird with *outstretcht wings.

overboard '50-vəz,b5:zd adv. over or beyond the side of a balloon: as, a piece of gold-leaf thrown *overboard.

overcharge ,ovəz'tsa:zd3 tr. pot too great a charge in; fill too foll: as, the balloon was *overcharged with gas.

overhead ,overhed adv. above one's hed; on high, aloft; up in the air or sky; near the zenith.

overhead ,ovəz'hed, (assumptivly) '30-vəz,hed adj. placed or situated overhed.

over-ocean '00-voz,00-son adj. occurring or executed in the air over or above the ocean; oversea.

oversea '00-vəz,sii adj. occurring or executed in the air over or above the sea; oversocean.

over-water 'oo-voz,wc:-toz adj. occurring or carried on over a water area; transaquatic: as, *over-water flight: distinguisht from overland.

paddle-wheel 'pædi,wiil n. a wheel containing radial floats or paddle-boards similar to that used for boats, proposed or propelling airships.

pagoscope 'pægə,skop n. an istrument for showing the probability of frest; a device for predicting frests; a form of hydrodeik which shows the current temperature of the dewa

pampero, pæm'pe:-zo n. [ploral pamperos] a cold, dry, south-westerly wind that sweeps over the pampas of Argentina and Uruguay, and northeastward to the Brazilian coast, in the rear of barometric depressions, corresponding to the norther of the Gulf States.

panel 'pæn' n. one of the vertical planes or aerofoils in a box-like structure; a curtain; a partition.

panorama ,pænə'za:-mə n. a complete or entire view; also, a picture representing a wide general view, as of a tract of country.

panoramic ,panə'zæmik adj. of or pertaining to a panorama; of the nature of a panorama: as, a *panoramic view, a *panoramic camera or lens,

parabola po'zwbo-lo n. a curv such as formd by the intersection of a cone with a plane parallel with its side; a plane curv which is everywhere equally distant from a certain fixt point or focus and a certain straight line or directrix.

parabolic 'pæzə,belik adj. having the form of, or resembling a parabola; of which the section is a parabola; of or related to the parabola; as, a *parabolic wing-section.

parachute 'pæzə, sut n.

1. an apparatus, usually of an umbrella shape, carried in a balloon and used by the aeronaut as a means of descending safely to the ground, as in the case of an accident to the balloon; also, any similar but smaller device.

dirigible parachute, a parachute that may be quided or

steerd; a steerable parachute.

double doublesparachute leap, a leap or jump made by two

performers by the aid of a double parachute.

double parachute, a parachute apparatus invented by Lattemann consisting of two parachutes which at the start are attacht to the balloon folded and one above the other, the lower one opening out first, and the other afterward.

double parachute descent, a descent in a double parachute. parachute light, a bright light given by a burning composition usually attacht to a small parachute and issuing, along with the parachute, from a small bom (cald a parachute lightsball) from which it is set free by explosion, used by armies in observing the position or movements of the enemy at night.

rotary parachute, a parachute which descends with a ro-

tary or turning motion.

2. any natural structure or organ serving to check a fall thru the air, or to support something in the air, as the patagium of a flying-squirrel.

parachute 'pæzə, sut v.

1. tr. convey by the aid of a parachute: as, I was *parachuted down.

2. intr. descend by, or as if by, a parachute.

parachute-bearing 'pærə-sut,be:-zin adj. bearing or having a parachute; provided with a parachute or patagium.

parachute-cloak 'pæzə-sut,klook n. a cloak-like sleeveless garment for aviators, which, in case of a fall, is designed to open out and act as a parachute; a fall-mantle.

parachute-cord 'pæzə-sut, ko:zd n. the cord which connects

a parachute with a balloon or airship.

parachute-descent 'pæzo-Sut-di,sent n. a descent in, or by means of, a parachute.

parachute-jump 'pæzə-ʃut,dʒamp n. a jump or leap made by the aid of a parachute; a parachute-leap.

parachute-jumper 'pæzə-ʃut,dʒampəz n. one who jumps by means of a parachute; one whose occupation is to make parachute-jumps.

parachute-knife 'pæzə-Sut,naıf n. the knife by which a

parachute is cut loose or freed from a balloon.

parachute-plane 'pæzə-sut,pieen n. an aeroplane or plane aerofoil which forms part of an airscraft and servs as or acts like a parachute; an emergencyswing.

parachuting 'pæzə, sutin n. the art or practis of using parachutes; the occupation of one who parachutes or makes par-

achute=leaps.

parachutism 'pæzo-su,tızəm n. the art or practis of parachuting.

parachutist 'pæzə, sutist n. one who uses a parachute; a

parachute=jumper.

parakite 'pæzə,kuɪt n. any kite of advanced type; a kite used for serious work rother than as a mere toy; a tailless kite such as used for scientific purposes.

paraselenae ,pæzəsı'lıi,ni n. pl. see paraselene.

paraselene ,pæzosr'hi-ni n. [ploral paraselenae] one of the bright spots sometimes seen at the intersection of the lunar halos with the parhelic circle; a mockemoon.

parhelia ,paz'hii-li-a n. pl. see parhelion.

parheliacal paz-hr'lai-a-kal adj.

parheliacal ring, same meaning as parhelic circle. see under parhelic.

parhelic ,poz'helik adj.

parhelic circle, a circle of white light extending all around the sky, passing thru the sun or moon, parallel to the

horizon; a parheliacal ring.

parhelion ,paz'hii-li-en n. [ploral parhelia, parhelions] one of the bright spots sometimes seen at the intersection of the solar halos with the parhelic circle or some supernumerary circle or band of light; a mockesun; a sunedog.

2. an image of the sun in the sky at a point directly

opposit the real position of the sun.

passenger-plane 'pæsind30z,pleen n. an aeroplane flyings machine designed to carry passengers.

patagial pə'tee-dzi-əl adj. of a patagium.

patagiate po'tee-d3i-ot adj. of the nature of, or having, a patagium.

patagium ,pætə'dzai-əm n. [plural patagia]

 a fold of skin or membrane extending along the side of the body of certain mammals and reptils, capable of expansion so as to enable the animal to take flying leaps; the wing-membrane of a bat; a parachute.

2. a fold or integument occupying the angle between the

upper arm and the forearm of a bird.

3. one of a pair of processes or appendages on the pronotum and thorax of certain leptrdeptera.

path-curvature 'pa:θ,ka:z-va-tsaz n. the curvature of the

flight=path of a flying air=craft.

patrol po'tgoot tr. tgavers, or move about in, as if on duty or on the watch; tgavers leisurely in all directions: as,

*patrolling the sky.

peace-bomb 'pris,bom n. [also spelt peace-bom] a bom-like missil used for peaceful purposes; one of the medal-like disks dropt from a friendly airship, intended as a symbol of peace, or as an advertisement, destind to be pickt up and kept as a souvenir by the people upon the earth below.

pear-shaped 'pe:z, sept adj. having the shape or form of a

pear, as certain balloons or gasbags.

pectoral 'pekto-zol adj. of, pertaining to, or situated on, the brest or chest of a bird or other animal, or some part or region of a flying-machine likend thereto; thoracic: as, *pectoral fins, *pectoral muscles.

pedal 'pedi n. a device, as in a flying-machine, which is actuated by the foot of the operator; a foot-lever; a tredle. pedal 'pedi, 'pii-di adj. of or by means of the foot: as.

*pedal control.

pegamoid 'pego, moid n. a purchment-like material used on the outside of balloonsenvelops for protection from the sun, rain, etc.

pegasidae pr'gæsi,di n. pl. a family of fishes, typified by

the genus Pegasus; the flying seasherses.

pendulum 'pendoo-lom n. a body suspended in such a manner as to swing freely to and fro under the influence of gravity and its energy of position. The pendulum has been suggested as a means of automatic balance for flyings machines.

penna 'peno n. [ploral pennae] a contour-fether; a pluma.

pennant-line 'penant, fain n. the line or cord connecting a branch kite with the main kite-line.

pennipotent ,pe'nipo-tnt adj. strong on the wing; powerful
in flight.

percaline 'perka-lin n. [also spelt percalin] a glossy French cotton cloth, sometimes used for kite-sails.

percher 'pertsor n. a bird which habitually perches, as distinguisht from birds which rest on the ground; a perching bird.

peripheral pə'zifə-zəl adj. [also spelt periferal] of the perifery: as, *periferal speed.

periphery-line pə'zıfəzı,laın n. [also spelt periferyeline] the

line of the perifery of a balloon.

peripteral po'zipto-zol adj. of or pertaining to the periptery; situated or occurring in the neighborhood of a wing or other aerofoil: as, the *peripteral system of flow.

peripteral area, the area of the cross-section of a peripteral zone: as, the *peripteral areas of adjacent blades

overlap.

peripteral motion, the motion of the air or other fluid in the immediate vicinity of a moving wing or aerofoil; the forced wave or system of air-currents about a moving aerofoil.

peripteral theory, theory regarding wingsform and the resultant fluid motions in the peripteral zone; doctgin as to the shapes of aerofoils and the systems of currents due to their motion thru the air or other fluid.

peripteral zone, the zone or sfere of influence of an aerofoil; the tract or region of fluid-fild space which surrounds

an aerofoil.

peripteroid ps'ziptə,zeid adj. like the periptery; resembling that which occurs round about the wing or aerofeil of a natural or artificial flyer: as, *peripteroid motion.

periptery pa'zipta-zi n. the region round about the wing, or in the vicinity of the aeroful, of a natural or ortificial

flyer: as, an unstable *periptery.

perspectometer ,pszspek'tomi-toz n. a device for marking dimensions or distances on a fotograf, or perspectiv drawing, as an aid in interpretation or in judging perspectiv.

petaurist pr'tc:-zīst n. a flyīng-falanger; a flyīng-opessum; an Australian flyīng-squirrel; an acrobat; one of the Petau-

rista

petrol 'petgol, pr'tgool n. a volatil inflammable liquid, one of the first products in the distillation of crude petgoleum, used in the motors of automobiles and flyers; petgoleum spirit; gasoline.

petrol-depot 'petrol,dii-po n. a depot or storehouse where

petrol or gasoline is kept for the use of airships.

petrol-tank 'petrol,tænk n. the gasolinestank of an airship. phase-curve 'feez,kezv n. [also spelt phase curve, fase-curv] a curv or curvd line drawn thru the midsfase points, or points of greatest flights velocity, in a series of fugoid curvs.

photogrammeter ,foto'gzæmi-töz n. [also spelt fotogrammeter] a fotografic camera used in mesuring the location and motion of clouds and in other surveyingswork; a cloudscamera.

photogrammetry foto'gzæmi-tri n. [also spelt fotogrammetry] the use of the fotogrammeter; the art of mesuring fotograms or bird'sseyesview fotografs taken from airships. piano-wire pi'æno.wore n.

1. a kind of slender steel wire of great strength such as used for the musical strings in pianos, often employd in

airship=construction.

2. one of the stays or braces made of such wire, as in an aeroplane flying-machine.

phugoid 'fiou, gord adj. [also spelt fugoid] like flight; flight=

like; of or related to a flight-path.

phugoid chart, a chart or drawing showing a complete series of fugoid curvs.

phugoid curve, a curv showing the form of a flight-path. phugoid equation, the equation of the flight-path of an

air=craft.

phugoid oscillation, the oscillation, or periodic up-and-down swinging which often characterizes flight; the wavering, or alternate fluctuation of the flight-path of an air-craft.

phugoid plane, the vertical plane passing thru the curv of

phugoid theory, the theory relating to longitudinal stability and the form of the fugoid cury or flightspath,

phugoid 'fivu.gerd n. a fugerd curv.

inflected phugoid, a fugoid having the form of an inflected curv.

pilot 'par-let n. one who steers or directs the course of an airship; a steersman; a helmsman; an airspilot; an aeronaut; an aviator.

pilot 'par-let tr. conduct as a pilot; direct the course of (an

airship); steer; guide.

pilot-balloon 'pai-lot-bo, loun n. a small unmand auxiliary balloon (sometimes attacht to a main balloon) allowd to rise in advance of the main balloon in order to ascertain the direction of the overhed air-currents.

pilot-chart 'par-let,tsa:zt n. a chart for the use of pilots,

showing wether conditions, storm paths, etc.

pilotess 'par-la-tis n. a female pilot; a woman air-pilot.

pilot-kite 'pai-lot,kait n. the first, upper, and smaller kite in a series of superposed kites (such as that described by Wenham in 1866), sent up in advance and used to lift the others or help sustain them in the air. compare draftskite.

pinfeather 'pin,fedez n. [also spelt pinfether] one of the

pin-like ungrown fethers of a bird, as it is before it has burst its confining sheath and expanded its vanes; any young undevelopt fether as it first pierces the skin.

pinion 'pinjen n.

1. the distal or terminal segment of a bird's wing; the outer port of a bird's wing, borne on the manus or hand and consisting commonly of ten primaries, the primary coverts, and the alula or bastard wing; also, the anterior border of an insects's wing.

2. a wing, especially with reference to flight.

3. the outermost fether, or any flight-fether, of a bird's wing; a pinion-fether.

pinion-bone 'pinjən,boon n. any one of the several bones of the pinion, hand, manus, or distal joint of a bird's wing. pinion-claw 'pinjən,kic: n. a herny claw borne by the index or pellex of certain birds.

pinion-feather 'pinjen, fedez n. one of the fethers on the pinion of a bird's wing; the outermost fether, or any flights fether, of a bird's wing; a pinion.

pirouette pizu'et n. a quick, short turn or whirl, as of a

flying=machine.

pirouette ,pizu'et intr. perform a pirouette; turn or whirl quickly.

pitch pits v.

1. tr. plunge, throw, or hurl downward thru the air.

2. intr. plunge with prow or hed downwad thru the air; also, rise or fall alternately at bow and stern; plunge in a lengitudinal direction: distinguisht from roll.

pitch pits n.

1. an act of plunging hed foremost.

2. the height to which a bird of prey soars before swoop-

ing down upon its victim: as, to fly a *pitch.

3. the constant distance between fixt points or lines, as between any two successiv convolutions or threds of a screw propeller, or between any two successiv turns of a screw propeller considerd as moving in a solid nut, messured in a direction parallel to the axis.

straight pitch, the pitch of an aerial propeller the angle of whose blade-surface remains constant, so that the different portions of the blade tend to advance thru the air at different velocities: distinguisht from uniform pitch.

uniform pitch, the pitch of an aerial propeller the angle of whose blade-surface varies from hub to tip in such a manner that all portions of the blade tend to advance thru the air with uniform velocity: distinguisht from straight pitch.

pitch-angle 'pit(, ængəl n, the angle of pitch, as of the

blades of an aerial propeller.

pitching 'pitsin n. the forward downward plunging of an airship; the alternate rising and falling of bow and stern; plunging lengthwise: distinguisht from rolling.

pit-gage 'pit, geeds n. [also spelt pit-gauge] a rain-gage ar-

ranged in a pit or saucer-like cavity in the ground.

plane pleen n.

1. a surface or superficies such that every straight line joining any two points in it lies wholly in it; a surface whose intersection with any other like surface is a straight line; often, a horizontal plane; a level.

2. [also, sometimes, spelt 'plane] a material surface approximately of this nature; also, a thin flat structure presenting such surface or surfaces to the air; a plane aero-

ferl: an aeroplane.

articulated plane, a sustaining-plane in a flying-machine orticulated or jointed in such a manner as to make possible the reduction or increase of the supportingsarea according to the speed of the machine.

falling plane, an aeroplane or aerofoil which is falling freely thru the air or other fluid, as in aerodynamic ex-

perimentation.

following plane, a plane or aerofoil which follows, or is attacht at the rear of the other planes or parts of a kite or flying-machine; one of the hinder supporting-planes among several which are placed tandem. compare leading plane.

horizontal plane, an aeroplane or aerofoil which is in a herizental position in the air or other fluid, as in aerodynamic experiments: distinguisht from inclined geroblane.

leading plane, a plane or aerofoil which leads.

main plane, see mainsplane.

normal plane, a plane or aeroplane whose surface is normal, or at right angles to, the line of the direction of

its translatory motion thru the air.

oblique plane, a plane or aeroplane whose surface is oblique or inclined to the line of the direction of its translatory motion thru the air; a slanting plane or aeroplane.

superposed plane, an aeroplane or aerofoil which is placed above another, as the upper of the two planes of a biplane

flying-machine or kite; one of a series of such planes.

trochoidal plane, a plane the center of which moves in a circular path at a uniform speed while the plane is kept normal to the surface of a trochoidal wave the period of which is equal to the time occupied by the center of the plane in making one revolution.

3. [also spelt 'plane] a flying-machine whose sustainings structures are planes or aeroplanes; an aeroplane flyer; an aeroplane.

plane pleen adi, such that every straight line joining any

two points in it lies wholly in it; flat; level.

plane preen intr. drive an aeroplane flying machine; move in a flyer; as, he *planed gently downward to earth.

plane-dropper 'pleen, dropper n. a device invented by S. P. Langley of Washington, D. C., for studying the aeroplane when allowed to drop or fall under the influence of gravity against the aerodynamic resistance encountered in its flight.

plane-spar 'pleen, spar n. one of the spars, sticks, or poles forming the framework of an aeroplane supporting surface; the front or rear longitudinal beam of a main

plane of an aeroplane flyer.

planetary 'plani, tezi adj. of the planet or earth.

planetary wind, see under wind.

plan-form 'pren, ferm n. a form of plan; the plan or shape (of a wing or other aerofoil) as projected on a horizontal or vertical plane.

planophore 'plano, for n. [also spelt planofore] a flyings

model produced by A. Pénaud in 1871.

plan-view 'præn, viou n. the view or aspect of the plan of an aerofoil.

pluma 'prou-ma n. [ploral plumae, plumas] a contour fether of a bird: a penna.

plumage 'prou-mid3 n. the fethers of a bird, collectivly; the

natural covering of a bird; the ptilosis.

plunge plands intr. throw or hurl itself downward thru the air; dive hedforemost; fall or sink hedfirst in a rapid or erratic manner: as, to soar and *plunge.

pluviograph 'prou-vi,gea:f n. [also spelt pluviograf] an in-

strument for recording rainfall.

pneumatics njo'mætiks n. the science of air and other gases.

pneumotide 'njuma, taid n. (fanciful) the tide or swelling current of the air; the flood of the airy ocean.

pocky 'pekr adj. having pecks or peck-marks, as mammato-

cumulus cloud.

pogonip 'pogo-nip n. a frozen fog which forms in cold air of the high mountain-valleys of Colorado, Idaho, and Nevada, and which, if inhaled, is apt to cause pulmonary trouble.

pogonium pə'gəo-ni-əm n. the vane or web of a bird's fether on either side of the shaft; the vexillum.

point point n. precise limit or degree.

point-to-point 'point-to, point adj. extending from one point or city to another: as, a *pointstospoint trip.

poise peiz n.

1. equality of weight; a balanced or hovering condition; equilibrium, balance, equipoise.

2. one of the poisers of a dipterous insect; a balancer; a

halter.

poise peiz v.

1. tr. hold or maintain in equilibrium; keep balanced.

2. intr. be balanced or held in equilibrium; be kept balanced; remain stedy.

poise-point 'poiz, point n. the point at which the whip-line of a kite is attacht to the bridle, and at which the kite is

thus persed.

poiser 'poi-zoz n. one of a pair of slender processes with clubd ends placed near the insertion of the wings in a dipterous insect or a male coccid, supposed to aid in poising, balancing, or equilibrating the insect; a halter, a balancer.

poising 'por-zin n. balancing, hovering.

polar 'poo-lez adj.

polar band, a band or strip of cloud extending over the sky from a point on the horizon to the opposit point; a Noah's Ark.

polar cap of cold air, the cap or mass of cold air which covers the north or south polar region of the earth, flowing toward the equator into the westerly planetary currents.

pole pool n.

1. either one of two points on the surface of the earth or other sferical body or the like which are equidistant from the equator, or are otherwise establisht as centers, termini, or points having certain prominent characteristics of position, influence, or function: as, the north *pole; the magnetic *pole; the galactic *pole.

magnetic pole, one of the two points on the earth's surface where the magnetic dipping-needle stands vertical;

the pole of verticity.

pole of cold, the pole or point in the polar regions of the earth where, at any given season, the wether is coldest; the cold pole.

pole of snow, the pole or point in the polar regions of the earth having the most, or the longest-lasting snow.

2. either of the extrematics (upper or lower) of the vertical axis of the sfere or gasbag of a sferoidal balloon.

pole-star 'pool,sta:z n. the star alfa in Ursae Minoris, at present about 1 1-4 degrees distant from the northern pole of the hevens; the North Star; the Polar Star; Polaris.

polyplane 'poli,pien n. a multiplane.

pongee ,pon'dzii, (assumptivly) 'pon,dzi n. a soft unbleacht Chinese silk made from the cocoons of a wild silk-worm, Bombyx pernyi or fantoni, which feeds on oak-leaves, sometimes used in making balloon envelops or gasbags: Chefoo silk.

pontoon pon'toun n. a floating structure of light framework such as one of the flat-bottomd boats used to support a dirigible upon a water-surface, or one of the hellow floats attacht to the lower part of a flying-machine to keep it afloat in case it falls into or alights upon the water.

port po:zt adj. on that side of an air-craft which is on the left as one faces the bow: larboard: the epposit of star-

board.

potential-gradient po'tensol, gree-di-ont n. the gradient of electric potential; the rate of change in the electric potential of the air.

powder-down 'pav-dəz,davn n. the powdery down or fluffy, dusty, or scurfy exfoliation due to the presence of certain down-fethers or plumulae in some birds, as the heron; pulviplume.

power 'pau-əz n. the capacity (of a balloon) to rise; ability to ascend or mount; lifting-capacity; ascensiv power.

power-gas 'pou-oz, gas n. gas used for power, as that used in an internal-combustion engin.

power-plant 'pou-sz,pla:nt n. a plant or apparatus which furnishes power; the engin or motor of an airship.

power-vessel 'pau-ez, vesel n. the vessel or car in which the power-plant of an airship is located.

precess ,psi'ses intr. move forward; advance: as, vertices which *precess downward.

precipitation psi,sipi'tee-son n. condensation and deposition of moisture from the state of vapor, as in the formation of dew, rain, or snow by cooling; also, that which is so deposited, as rain, snow, or hail.

presentation ,psizen'tee-son n. the process, state, condition, or mode of being presented to view; exhibition; appearance, aspect: as, the shape of an aerofoil's face in

*presentation.

diagonal presentation, the presentation of an aeroplane in a diagonal or oblique manner, as in aerodynamic experimentation; oblique presentation.

square presentation, the presentation of an aeroplane in

in a square manner, as in aerodynamic experimentation; foll-on presentation of a square plane.

pressure 'psesəz n.

1. posh or thrust, as of the gas inside of a balloon, or of the air upon an aeroplane, airship, or other object.

center of pressure, see under center.

forced pressure, an increast pressure or density which is forced upon the air or other fluid adjacent to an aerofoil or other surface which is acting upon it. compare forced vacuum, under vacuum.

negativ pressure, pressure in a negativ sense or direction, as that produced by rarefaction of the air in front

of a revolving propeller; suction.

tangential pressure, pressure in a direction tangential to the surface of an aerocurv or curvd aerofoil; posh or thrust upon a curvd sustaining surface in the direction of a tangent to the curv of that surface parallel to the line of the direction of the impinging air current or to the direction of flight.

vapor pressure, see vaporspressure.

2. the elastic pressure of the atmosfere; atmosferic pres-

sure; barometric pressure.

belt of high pressure, a belt or long narrow region of high barometric pressure, as between two areas of high pressure, or as the belt nearly encircling the earth near the Tropic of Capricorn.

equatorial belt of low pressure, a belt or long narrow tract nearly encircling the earth in the equatorial region and characterized by low barometric pressure due to the northeast and southeast tradewinds and the deflecting force resulting from the rotation of the earth.

high pressure, unusually high pressure of the air as indicated by a baremeter; atmosferic pressure which is greater

than the normal.

high-pressure area, an area or region of the earth's

surface over which the barometric pressure is high.

low pressure, unusually low pressure of the air as indicated by a barometer; atmosferic pressure which is less than the normal.

pressure-anemometer 'psesor-ani, momittee n. an anemometer for mesuring the pressure of the wind.

pressure-gradient 'psesoz,gree-di-ont n. the gradient of pressure, as of the atmosfere; the rate at which the air pressure changes in value.

pressure-height 'psessz, hart n. the atmosferic pressure in terms of the height of a vertical column of fluid of uniform density equal to that of the air at the point where the pressure is mesured; the height of a homogeneous atmosfere.

pressure-plate 'psesoz, preet n. a plate used in ascertaining the pressure of the wind.

pressure-reaction 'psesez-zi,æksen n. the reaction of a moving aeroplane to the pressure of the atmosfere acting against it.

pressure-region 'psesəz,zi-dəən n. a region of air-pressure, as against the under or the upper surface of a moving aerofoil.

pressure-value 'psessz, vælio n. the value or numerical amount of the pressure of a fluid, as air upon an aerofoil.

primaried 'psai-ma-zid adj. furnisht with primaries or primary fethers: as, nine=*primaried.

primary 'psai-me-zi n. one of the wing-fethers seated upon the manus or hand of a bird.

prob pseb n.

old prob, the chief of the wethersbureau; the wethers

projector pso'dzektoz n. an apparatus for projecting or throwing a beam of light, often consisting essentially of a parabolic mirror.

pronation pso'nee-sən n. the act or result of pronating; the prone position of the forearm in which the bones of the forearm are more or less crost and the palm of the hand turnd downward: the opposit of supination.

propellant pso'pelant n. an agent or force that propels; a

propelling=agent.

propeller pso'pelaz n. any device for propelling, driving forward, or importing translatory motion; a contrivance such as an oar, a paddlezwheel, or especially a screw, actuated by a motor and used for the propulsion of an airship; a screw propeller.

collapsible propeller, a propeller so made as to be capable

of being collapst or folded up.

curved propeller, a propeller the cross-section of whose blades, in a plane passing thru the shaft, is curvd; a propeller the surface of the rotation of whose blades is curvd.

dihedral propeller, a propeller whose blades form a di-

hedral angle with each other.

fan propeller, same meaning as fanspropeller.

flexible propeller, a propeller which is made of flexible material mounted on a frame; a non-rigid propeller; a collapsible propeller.

multibladed propeller, a propeller having several or many blades.

non-rigid propeller, an aerial propeller which is not

rigid; a flexible propeller.

plural propellers, propellers which are placed several upon one given flying-machine; propellers two or more of which are placed upon a single machine; multiple propellers.

rear propeller, a propeller which is placed in the rear or

hind part of an air-craft. compare tractor propeller.

screw propeller, a propeller in the form of a screw or system of blades arranged spirally around a central hub attacht to a rotating shaft and made to rotate by power.

single propeller, a propeller which is single or the only one upon a given flying-machine. compare plural pro-

pellers.

straight propeller, a propeller the cross-section of whose blades, in a plane passing thru the shaft, is straight; a propeller the surface of the rotation of whose blades is a plane normal to the shaft.

tractor propeller, a propeller which is placed in the front or fore part of an aircraft, thus acting as a tractor drawing the machine forward; a tractor screw; a front propeller.

propeller-blade pso'peləz,bleed n. one of the blades or vanes of a propeller.

propeller-diameter pso'pelaz-dai,æmi-taz n. the diameter
 of a propeller.

propeller-efficiency pso'pelez-i,fisen-si n. the efficiency or effectual power of an aerial propeller.

propeller-hub pso'pelez, hab n. the hub or centgal block-like part of a propeller, from which the blades radiate and by

which it is fastend to the shaft.

propeller-reaction pso'pelez-zi,æksen n. the reaction of the revolving (single or unneutralized) propeller of an air-cruft against the air on which it acts, to which is due the tendency of the cruft to revolv in the opposit direction.

propeller-shaft pso'pelez, (a:ft n. the rigid shaft which carries the propeller of an airship.

propeller-speed pso'pelez, sprid n. the rotational speed or velocity of an aerial propeller.

propeller-thrust pso peloz, θsast n. the thrust or push of a propeller against the air.

propeller-travel pso peloz, trævol n. the travel or translatory motion of a propeller thru the air.

propeller-wheel pso'peləz,wiil n. an aerial propeller or

screw; a screw propeller.

propelling-agent pso'pelin, ee-dsont n. an agent for propelling; an agency for effecting the propulsion, or the forward translatory motion, of an airship; a propellant.

propelling-apparatus pso'pelin-æpəzee-təs n. an apparatus or contrivance for propelling or driving forward an

airship.

propelling-device pso'pelin-dr.vais n. a device for propelling an airscraft; a propellingsapparatus.

propelling-effect pso'pelin-i,fekt n, the effect of propelling; the fact of propulsion.

propelling-force pso'pelin, fo:zs n. a force effectiv in propelling; a force used in airship-propulsion.

propelling-machinery pso'pelin-ma, sii-na-zi n. machinery

used in propelling; propulsiv apparatus.

propelling-screw pso'pelin, sksou n, the screw which pro-

pels an airship; a screw propeller.

propelling-surface pso pelin sazfis n. a surface or thin structure used in propelling; a propellant aerofoil, such as the wing of a bird.

propelling-wing pso'pelin, win n. a wing which propels; a

wing considerd as a propellingsorgan.

propulsor pso'paisoz n. anything which propels, drives forward, or imports translatory motion; a propulsiv apparatus; a propeller.

propulsion pso'pal(on n. the act of propelling or driving

forward; impulse given.

prow psau n. the fore or front part of an airship; the bow. pseudoneuroptera ,sçudo-njo'zoptə-zə n. pl. an order of neuropterous insects comprizing the dragon-flies, May-flies, and others, having incomplete metamorfosis, four membranous wings, and mandibulate mouth-ports.

psychrometer ,sar'ksomi-təz n. an instrument consisting of a wet-bulb thermometer and a dry-bulb thermometer, for mesuring the pressure of the water-vapor in the air, or the

relativ humidity.

aspirator psychrometer, a psychrometer fitted with an

aspirator; an aspiration psychrometer.

pterodactyl ,tezo'dæktil n. an extinct reptil of the genus Pterodactylus or order Pterosauria; a pterosaurian; an or-

nithosaurian; a flying-dragon; a pterodactylian.

pterophore 'teza, foz n. [also spelt pterofore] a flyer proposed by Paucton in 1768, consisting of two aerial screws, one to sustain and the other to propel, attacht to a light chair.

pterygoid 'tezi,goid adj. winglike; wing-shaped; resembling that of a wing; as of something provided with wings or sustaining-surfaces; similar to that of a winged thing. compare apteroid.

pterygoid aspect, see under aspect.

pteryla 'tezz-lo n. [ploral pterylae] a fetherd tract or space on the skin of a bird; a fether-tract: distinguisht from apterium.

pterylae 'tezi,li n. pl. see pteryla.

puff paf n. a shorp forcible blast of sudden emission, as of air, wind, or smoke; a whiff of air.

puffy 'pafi adj. coming in puffs; gusty.

pull pol n. drawingspower or action; a hauling; a tug.

pulling-power 'polin, pou-ez n. power or capacity to poll; tractil power.

pulviplume 'palvi,ploum n. powder-down.

purga 'pu:z-go n. a cold wind in Siberia and Labrador in which fine snow or snowsand is often whirld about. It is similar to the burga of Alaska.

pygostyle 'par-ga, starl n. the large bone at the end of a

bird's tail; the plowshare bone; the vomer.

pylon 'par,lon, 'par-lon n. the framework for raising and dropping the weight sometimes used for storting an aeroplane; a storting-derrick; a catapult; also, a similar upright tapering wooden framework used as a signal-tower or marking-post for the guidance of aviators on a flying-field.

pyrheliometer ps:z-hili'omi-təz n. an instrument devised by Pouillet for mesuring the intensity of the heat of the

sun; a pyroheliemeter.

quadrant 'kwedrent n. an instrument consisting primarily of a graduated quarter circle, used for taking altitudes of hevenly bedies; especially, the reflecting quadrant invented in 1730 or earlier, used by navigators for taking the altitude of the sun, but now largely superceded by the sextant

quadruplane 'kwedro,pieen n. an aeroplane flyingsmachine having four mainsplanes; a multiplane having four sustain-

ing=surfaces.

qualm kwo:m n. a (sudden) feeling or fit of faintness, illness, or sickness, as a touch of seasickness or nausea.

qualmish 'kwa:-mis adj. of the nature of a qualm.

quarter 'kwc:-təz intr. fly with the wind on the quarter, or 45 degrees abaft the beam: as, to *quarter into the wind. quasi-aerial kwee-sai-e'i:-zi-əl adj. seemingly or nearly,

but not streetly, aerial; aerial in certain respects: as,

*quasi=aerial locomotion.

quill kwil n. the tube or barrel of a bird's fether, the part whose base is attacht to the skin; sometimes, also, the tube and shaft, taken together; and, further, the whole fether; a quillefether.

bastard quills, the quills growing upon the bastard wing, the winglet, or thum of a bird; the quills of the alula; the

spuriae.

quill-covert 'kwil, kavəzt n. one of the fethers immediately covering the bases of the quill-fethers or quills of the wings of a bird; a wing-covert or a tail-covert; a tectgix.

quill-feather 'kwil, fedor n. [also spelt quill-fether] one of the large flight-fethers or remiges of a bird's wing, or, sometimes, of the tail, provided with a quill or hollow tube at the base; a quill.

rachis 'zee-kis n. [also spelt rhachis] the stem, shaft, or scape of a bird's fether, as distinguisht from the vexilla, vanes, or webs; in quill-fethers, the upper opaque part of the stem which bears the vexilla or vanes, as distinguisht from the calamus or quill.

racing-aeroplane 'zee-sin, ee-əzə-pleen n. same meaning

as racing=plane.

racing-machine 'zee-sin-mə, siin n. an aeroplane or other airsmachine used for racing; a speed machine; a racer.

racing-plane 'zee-sin,pleen n. an aeroplane flying-machine designed for racing or speed; a racing-machine of the aeroplane type.

radiation ,zedi'ee-∫on n. the act of radiating; the state of being radiated; the amount of heat>rays or other form of

radiant energy shot forth from a given source.

atmospheric radiation, the thermal radiation from the earth's atmosfere; the radiant dissipation of heat from the atmosfere.

solar radiation, the radiation of the sun as mesured by

the heat the earth receivs from it.

coefficient of radiation, the constant numerical mesure of radiation; the unit of radiating power, as of a given portion of the earth's atmosfere, or of a given quality of air.

radiation-fog ,zedi'ze-\an,fog n. fog caused by radiation of

heat on low grounds.

radiation-thermometer ,zedi'εe-sən-θəz,momi-təz n. a

mercurial thermometer enclosed in a glass vacuum-tube,

used for mesuring solar radiation.

radiation-weather ,zedi'ee-Sən,wedəz n. wether due to, or controlled largely by, radiation of heat from the ground; the wether characteristic of an area of high atmosferic pressure, clear sky, and light winds, varying with the thermal radiations from the earth.

radiometer ,zedi'emi-təz n. an instrument consisting of a frame supporting mica-vanes which are free to revolv in a vacuum, used for mesuring or demonstrating the effects

of radiant energy, as light or heat.

radius 'zee-di-as n. [ploral radii] one of the processes on each side of the upper border of a bird's fether; a borbule.

aerodromic radius, the distance in a straight line from

derodromic radius, the distance in a straight line from the mass-center of an aerodone to the aerodromic wings-center.

aerodynamic radius, the distance in a straight line from the massscenter of an aerodone to the aerodynamic wingscenter.

raft za:ft n.

aerial raft, a flat structure capable of floating in the air; an aeroplane.

rail zeel n. see starting-rail and launching-rail.

rain zeen n. water in the form of drops resulting from the condensation and aggregation of vapor, falling thru the lower regions of the air or atmosfere; also, the descent or fall of water in this form; and, further, a shower, period, or season characterized by the fall of water in this form.

belt of rains, the belt or long narrow equatorial region between the tradewinds, nearly encircling the earth, characterized by frequent rains through the year; the equatorial

rain=belt.

black rain, rain or rainwater which is somewhat black, or which leavs a black residue owing to the presence of black fungi, black soil, or soot carried down from the atmosfere.

coast rain, one of the rains characteristic of the coast or costal regions of a continent or island, usually due to winds blowing off the sea toward the land.

convective rain, rain which is due to the cooling of air by expansion when forced upward by convection-currents.

cyclonic rain, rain whch is due to the cooling of air by expansion when forced upward by cyclonic circulation.

dynamic theory of the formation of rain, the theory of Espy and others that rain, snow, etc., is caused by thermodynamic processes.

monsoon rain, a rain accompanying or due to a monsoon wind.

luminous rain, rain characterized by luminous electric discharges or sparks between the drops or between the

drops and the ground.

orographic rain, rain which is due to the cooling of air by expansion when deflected upward by hills or mountains. yellow rain, rain due to the pellen of firstgees, etc., being raised by the wind and afterwards precipitated; sul-

rain-area 'zeen,e:-zi-ə n.

1. an area or region of the earth over which rain is falling or has fallen, as one of those shown on a wether-

2. the area or region of an extensiv cyclone in which the maximum rainfall occurs, as one of the southerly quadrants, in the northern hemisfere, or a northerly quadrant in the southerly hemisfere.

3. the area or tract of a stormsarea where rain is falling,

as distinguisht from the area where snow is falling.

rainball 'zeen,bc: n. (in England) one of the festoons of mammato-cumulus or pocky cloud, considerd as being a sign of rain.

rainband 'zeen, bænd n. a dork band in the solar spectrum due to absorption of light by the water-vapor in the atmosfere, studied by means of a spectroscope in forecasting wether.

rain-bearing 'zeen,be:-zin adj. having, producing, or bring-

ing rain: said of winds.

rain-belt 'zeen,belt n. a belt or elengated region where rain is relativly frequent; a tract where the rainfall is greater than in surrounding relativly and tracts.

equatorial rain-belt, the rain-belt which girdles the earth in the equatorial region and is containd by the somewhat

wider zone known as the equatorial cloud-belt.

rain-bird 'zeen,bs:zd n. a bird, as the rain-crow, which is supposed to indicate rain by its noisy or uneasy actions.

compare stormsbird.

rainbow 'zeen,boo n. a bow or arch exhibiting the colors of the solar spectrum in concentric bands, formd in the sky opposit the sun, by the reflection, double refraction, and dispersion of the sun's rays in falling rain-drops; also, a similar arch in the spray of cataracts, breakers, and the like.

moonlight rainbow, a dim rainbow occurring by moonlight.

spurious rainbow, a relativly faint bow seen close inside the violet of the primary bow of a finely developt rainbow, or outside the violet of the secondary bow; a supernumerary rainbow.

supernumerary rainbow, same meaning as spurious rain-

1 bow.

rain-chart 'zeen,t\a:zt n. a chart or map showing the distribution of the rainfall over a certain area; a rain-map.

rain-cloud 'zeen,klood n. a cloud from which rain falls; nimbus; cumulo-nimbus or strato-nimbus; also, sometimes, fracto-cumulus, and, further, scud.

rain-crow 'zeen,ksoo n. a tree=cuckoo often heard in lower-

ing wether, and supposed to foretell rain.

rainfall 'zeen.fc:l n.

1. a fall or shower of rain.

2. the quantity of rain (or rain, snow, etc.,) which falls in a certain time in a given area, mesured by its average depth (or the depth of its equivalent in the form of water), in inches or otherwise.

rainfall-chart 'zeen-fc:l,tsa:zt n. an isohyetal chart.

rain-gage 'zeen, geed3 n. [also spelt rain-gauge] an instrument for collecting and mesuring the amount of rainfall at a given place; a pluviometer.

rain-maker 'zeen, mee-kəz n. one who pretends to cause rain by some fysical process, as by the explosion of dynamite.

rain-map 'zeen, mæp n. same meaning as rain-chart.

rain-proof 'zeen,psouf adj. proof against rain; rain-tight; waterproof in a shower.

rain-storm 'zeen, storm n. a storm of rain; a rain.

rain-streak 'zeen, strik n. a streak or tail-like mass seen in connection with cumulus cloud, due to rain falling slowly and drifting behind in the lower wind. compare tailed cirrus under cirrus.

rain-tight 'zeen,tart adj. so tight as to exclude rain; rains

proof.

rain-wind 'zeen, wind n. a wind blowing from the point or region whence rain is coming, as one blowing from the ocean, from the earth's equator, or up a mountain-side.

rake zeek v.

1. intr. incline from the perpendicular or the horizontal, as the mast, stem, or stern of a watership.

2. tr. give a rake to; cause to incline or slope.

rake zeek n. inclination or slope away from a perpendicular or horizontal line: as, the *rake of a ship's mast.

raking 'zee-kin adj. having a rake or inclination; inclining. rami 'zee,mai n. pl. see ramus.

ramus 'zee-mas n. [ploral rami] one of the barbs of the web, vane, or vexillum of a bird's fether.

rarefaction ,zæzi'fæk\on n. the act or process of rarefying or making rare; also, the state of being rarefied or rare:

opposed to condensation and compression.

rarefaction side, the side or surface of a wing, aeroplane, propeller-blade, or other aerofoil, which effects the rarefaction of, or recedes from, the air: the opposit of compression side.

ratite 'zee, tart adj. raft-brested, as a bird; having a flat or keelless brest-bone or sternum; flat like a raft; having no

keel, as a brest-bone.

ratline 'zætlin n. [also spelt ratlin] one of the herizental ropes extending between the shrouds of a ship, or between ropes hanging vertically below the car of an airseraft, thus furnishing steps, like the rungs of a ladder, for climbing up and down.

rattan ,zæ'tæn n. [also spelt ratan] the stem of the rattanpalm, often split, used somewhat in flying-machine con-

struction.

reaction-jet zi'æk\on,dzet n. a jet or fluid, as air or steam, the atmosferic reaction against which has been proposed as a means of propelling airships.

rearward 'zi:z-wəzd adj. situated at or toward the rear;

placed astern; aft.

reascend zi-ə'send intr. ascend again; mount or go up a second time.

reascension zi-o'senson n. another ascension, as of an aero-

rebalance zi'bæləns intr. balance again; regain equilibrium. recession zi'sesən n. the action of an airship in retiring or withdrawing into the air, just after a swoop; the upward sweep which immediately follows the downward rush of a flying-machine.

reckoning 'zeko-nin, 'zeknin n. (seasterm) the calculation of the position of a ship from the rate as determind by the log and the course as determind by the compass, the place

from which the vessel started being known.

reconnaissance zi'keni-səns n. the act or eperation of reconneitering; preliminary examination or survey.

reconnoissance ,zekə'nei-səns n. same meaning as reconnaissance.

reconnoiter "zekə'nei-təz v.

1. tr. examin; make a preliminary survey of; survey, as for military purposes.

2. intr. make a survey or inspection preliminary to tak-

rng some action; examin a position or locality as a precaution.

reconnoitering-balloon ,zekə'nei-tə-zin-bə,loun n. a bal-

loon used for military reconnectering.

recording-balloon zi'ke:z-din-ba,toun n. a balloon for sending meteorologic recording-instruments to high altitudes to obtain data as to atmosferic conditions.

recording-instrument zr'ke:z-din,instro-mont n. an instrument for automatically recording temperature, altitude, etc.

record-sheet 'zekəzd, siit n. the sheet of paper on which a record is made by an instrument such as the meteorograf.

rectrices ,zek'tgai,siz n. pl. see rectrix.

rectrix 'zektriks n. [ploral rectrices] one of the long large quill-fethers of a bird's tail; a rudder; a tail-fether.

reef ziif tr. reduce the extent or surface of (an aerofoil or supporting plane) as by taking in, folding up, and securing, as for speedy flight.

reek ziik n. smoke; vapor; exhalation, fume.

reel ziil intr. turn round and round; whirl; sway from side to side as if dizzy.

reentrance ,zi'entgons n. the reentering angle in the posterior or rear border of a bird's wing, or the part of the wing adjacent thereto.

registering-balloon 'zedzīstrīn-bə,loun n. a small balloon to which a registering=instrument or recording=apparatus is

attacht; a registrationsballoon.

registration-balloon ,zed3r'stree-5ən-bə,loun n. a small balloon to which a registering=instrument is attacht; a registering=balloon; an exploring=balloon.

regulating-cone 'zegju-letin,koon n. a conical opening or part in a parachute for regulating the escape or passage of

the air thru the parachute.

remex 'zii,meks n. [ploral remiges] one of the large stiff quill-fethers which form most of the spred of a bird's wing; a flight-fether; a rower.

remiges 'zemi,dziz n. pl. see remex.

rend zend intr. [past participle rent] tear, split, part asunder, as a balloomenvelop sometimes does.

rent zent n. an opening made by rending or tearing; a tear, break, or breach; a crevice or crack: as, a *rent in a balloon

resilient zi'zili-ənt adj. having resilience; apt to resile, start back, recede, or receil; tending to spring or bend back; rebounding: as, a mobile and *resilient flightsfether.

resistance zr'zistns n. the action of resisting; opposition,

antagonism.

fluid resistance, the resistance offerd by a fluid, as air, to a body moving in it.

resisting-surface zi'zisin, sezfis n. a surface which resists atmosferic pressure.

resonator 'zezə,netəz n. a device which resounds, as that used on certain Chinese kites, producing an intense plaintry sound which can be heard at a great distance.

re-start zi'sta:zt intr. start again, as on a flight; set out

once more.

resting-place 'zestin, plees n. a place or spot upon which a balloon or airship rests, or may rest; a landing-place; an

alighting=place.

restraining-rope zi'stree-nin zoop n. a short rope attacht to a flying-machine and restraining or preventing it from rising too far, as in the circular testing-railway proposed by C. Weyher in 1884.

return-trade zi'ts:zn,tgeed n. same meaning as antitrade.

rhachis 'zee-kis n. same meaning as rachis.

rhipiptera zz'piptə-zə n. pl. a famrly of heteromerous coleoptera including the genus Stylops; the rhipidoptera; the

stylopidae.

rhumb-line 'zam,lain n. [also spelt rum:line] a line on the surface of the earth which cuts the meridians at a constant angle; a lexodrome, or lexodromic line.

rib zib n.

1. one of the curvd cross-pieces in the frame of a kite or

other aerofoil: as, the main *rib of a kite.

2. one of the strips or rods extending between the front and rear spors of a main-plane or wing in an aeroplane or other flying-machine and helping to support it and maintain its peculiar archi form or outline; a rib-piece. compare stiffener, wing-bar (sense 2).

3. a rib-like stripe of cloud, such as a Noah's Ark or

polar band.

ridge zid3 n. the highest part of the roof of a bilding; the meeting of the upper ends of the rafters.

rift zift n.

1. an opening made by riving or splitting; a fissure, a cleft: as, a *rift in the clouds.

2. a discontinuity in a fluid caused by a body coursing swiftly thru it.

right-and-left ,zar-tn'left adj. sidestosside.

rigid 'zıdzıd adj. characterized by having a rigid or stiff gasbag frame, as a Zeppelin airship; of airships of this type: as, a *rigid balloon; the *rigid type of dirigible: distinguisht from non-rigid and semi-rigid.

rigidity zi'd5id1-t1 n. the quality or condition of being rigid; stiffness.

rime zam n. white frest or hoarfrest, especially the thick hevy frest which forms upon objects from rain or the freezing of mist.

ring zin n. the concentrating-ring of a balloon; the concentrating-hoop; the hoop.

rip zip v.

1. tr. tear or cut open; split.

2. be torn or split open; open or part.

rip-cord 'zip,ke:zd n. a cord in a balloon or airship, invented by Jehn Wise in 1844, which, when pold by the aeronaut, will cause the ripping-panel or the gashag to be ript or torn open, thus allowing the gas to escape and the balloon to descend quickly to the ground; the ripping-cord.

ripping-panel 'zipin, pænl n. a panel or strip of balloons cloth in the upper part of the gasbag of a balloon which, by manipulating the rippingscord, may be suddenly ript or or rent, so as to allow the inflatingsgas to escape and the balloon to descend; the rippingstrip; a ripstrip.

ripping-strip 'zipin, strip n. same meaning as rippings

panel

ripple-cloud 'zipol,kroud n. a shortslived cloud formd as if markt by ripples; a waved cloud.

rip-strip 'zip,strip n. the rippingsstrip of a balloon; the rippingspanel.

rise zaiz intr. [past participle risen; preterit rose] move up-

ward; ascend, mount.

rising-angle 'zai-zin, engol n. the angle at which rising is done; the angle which a rising aeroplane or glider makes with the direction of flight or with the horizontal; the angle of inclination of an aeroful adjusted for rising into or thru the air: compare gliding angle.

rising-capacity 'zai-zin-ko,pæsi-ti n. capacity to rise, mount, or ascend in or thru the air; rising-power; ascend-

ing=power.

rising-power 'zai-zin,pou-oz n. power to rise, mount, or ascend in or thru the air; rising-capacity; ascending-

rising-track 'zai-zin,træk n. the track or railway by the aid of which a flying-machine rises into the air in flight; a

storting=track; a launching=rail.

rocket 'zokit n. a tube containing explosive which, when ignited, propel the tube forward; a sky-rocket. Rockets

are used in fireworks, warfare, and life-saving, and have been proposed as a means of propelling balloons.

rocket 'zekrt intr. fly swiftly straight up into the air, as a fesant when flusht; tower.

rocketing 'zeki-tin n. the action of the verb rocket; a flying rapidly upward as a fesant does when flusht; towering.

rocket-rising 'zokit,zai-zin adj. rising swiftly in flight like a sky-rocket, as a flying-machine.

roll zool intr. go down or sink on one side and then on the other, as an airship; turn, swing, or oscillate from side to side about a longitudinal axis. compare pitch.

roll-cloud 'zool,krood n. a roll-shaped, cylindrical, or spindle-shaped cloud as in cirro-cumulus, stratus, or cumulo-stratus; a cloud resembling a roller or breaker of the

roller 'zoo-loz n. one of a series of vertex-filaments in a system of flow which act as rollers between the live fluid and the ded-water; a vertex roller.

root zout n. the part of a bird's wing toward the anatomi-

cal shoulder.

rotation zo'tee-Son n. the act or process of rotating or turning, as do the parts or particles of a fluid; the action or state of whirling around.

rotation-anemometer zo'tee-son-ani, momi-toz n. an anemometer for mesuring the velocity of the wind by means of the rotation of blades or cups moved by the wind.

rough-winged 'zaf,wind adj. [also spelt rough-wingd] having rough wings; having the outer web of the first primary retersely serrulate: as, the common *rough-wingd swallow.

rower 'zoo-əz n.

1. one of the remiges or flight-fethers of a bird's wing; a quill-fether of the wing.

2. a bird that rows with its wings, or practises rowing

flight.

rubbersilk 'zabəz,sıkk n. a balloonsfabrıc of rubberized sılk intgoduced by T. S. Baldwin about 1908, or earlier, used also in aeroplaneswings.

rudder 'zadəz n.

1. a device, usually at the rear or front of an airship, by means of which the craft is guided or steerd; a steering plane; a rudder-plane.

box rudder, a rudder in the form of a box with two opposit sides or ends wanting; a rudder typically consisting of four planes joining at right angles in lines lying

in planes parallel to the vertical plane passing thru the line of the direction of flight.

double rudder, any rudder having two planes or surfaces. flexible rudder, a rudder which is made flexible or capable of being bent so as to present curvd surfaces to the air.

forward rudder, same meaning as front rudder.

front rudder, a rudder, usually horizontal, located at the front or fore part of an airship; a forward rudder; an ele-

vatıng=plane; an elevator.

horizontal rudder, a rudder, commonly at the front or rear of a flying-machine, whose axis of rotation is horizontal and which is used for up-and-down steering and to effect, or aid in maintaining, longitudinal equilibrium; an up-and-down rudder; an altitude-rudder; an elevating-plane; an elevator.

lateral rudder, a rudder, as in the rear of an aeroplane flying-machine, used to effect, or aid in maintaining, lateral equilibrium; a vertical rudder-plane designed to aid in balancing a flyer laterally; a right-and-left rudder.

pivoted rudder, a rudder which is pivoted so as to turn

upon an axis, usually horizontal or vertical.

right-and-left rudder, same meaning as lateral rudder, vertical rudder, side-to-side rudder.

sidestosside rudder, same meaning as rightsandsleft rudder.

stabilizing rudder, a rudder or rudder-like aerofoil, as at either wing-tip of an aeroplane flying-machine, used for stabilizing or stedying the craft; a balancing-plane; an aileron.

twisting rudder, a flying-machine rudder which is capable of being twisted, warpt, or revolve and flext at the same time, and thus acting upon the air in every possible direction, after the manner of the tail of most birds.

up-and-down rudder, same meaning as horizontal rudder,

altitude rudder.

vertical rudder, a rudder whose axis of rotation is vertical and which is used for rightsandsleft steering and to effect, or aid in maintaining, lateral equilibrium; a rightsandsleft rudder; a lateral rudder.

2. a ruddersfether.

rudder-feather 'zadəz,feðəz n. [also spelt rudder-fether] one of the rectrices or principal fethers of a bird's tail; a true tail-fether; a rudder.

rudder-frame 'zadəz,fseem n. the frame of the rudder of an airship.

rudder-lever 'zadəz,hi-vəz n. a lever in an airship, used to control a rudder.

rudder-plane 'zadəz,pleen n. an aeroplane used in or as a rudder, as in a Zeppelin airship; a steeringsplane.

rudder-rope 'zadəz,zoop n. the rope by which the steersman or aeronaut controls the rudder of an airship.

rudder-tail 'zadəz,teel n. a tail acting as a rudder; an airship-tail designed to function as a rudder; a steering-tail.

rudder-wheel 'zadəz,wiil n. a wheel by which the rudder of an airship is controld; a steering-wheel.

rule zoul n. the expression of a uniformity among fenomena; a minor law: a formula.

Archibald's rule, the rule stated by E. D. Archibald as to the rate of diminution of wind-velocity with altitude.

Broun's rule, the rule stated by J. Allan Broun, in 1845, as to the direction of the movement of lower cumulus scud, etc.

Buchan's rule, the rule formulated by A. Buchan, in 1865, as fellows: "Stand with your left hand toward the center of low barometer and your right hand toward the high, then, in the northern hemisfere, the wind will be on your back."

Espy's rule, the rough rule stated by Espy, about 1834, that the altitude (in feet), above the observer, of the base of cumulus cloud is 300 times the depression of the dewepoint (in Fahrenheit degrees) at the locality of the observer.

Galton's anticyclonic rule, see under anticyclonic.

Meldrum's rules, the rules formulated by C. Meldrum for guidance in hurricanes in the Indian Ocean. These rules were elaborated by Blanford, in 1888.

Stevenson's rule, a rule or formula stated by Stevenson as to the velocity of wind, over level land-surfaces increasing with the altitude.

run zan n. the buttock and tail (taken together) of an aerofoil or other streamline body; the stern or afterbody of an
airship of streamline form: as, the flow has not time to
close in round the *run: distinguisht from entrance.

runner 'zanəz n. a skid, skate, or the like, attacht under a flying-machine so as to allow it to run or slide along upon the ground in alighting; a landing-skid.

running-gear 'zanin,gi:z n the gear or apparatus by which a flying-machine is run or operated; the underbody or chassis.

running-rope 'zanin,zoop n. a fastening-rope, as in an airship or flyer, which, as it is loosend or let go and allowd to run out, permits the craft to rise. sack-cloud 'sæk,krand n. a cloud from which a sack-like or bag-like pocket hangs; a form of mammato-cumulus whose rounded pendent portions resemble sacks or bags.

safety-bridle 'seef-tr,bzar-dl n. a kite-bridle provided with, or arranged in the form of a safety-device which comes

into play in case of breakage.

Marvin safety-bridle, a form of kite-bridle having two ports, a lower and an upper bridle, joined by a safety-line. If the safety-line breaks, the upper bridle comes into play.

safety-buoy 'seef-tr,buu-r n. an aerial buoy or float, as a balloon, attacht to or ferming port of an airship and designed to act as a safey-device in case of a tendency to fall.

safety-car 'seef-ti,ku:z n. a proposed auxiliary car to be suspended below the principal car or basket of a balloon so as to admit of cooking and other operations being carried on in it with safety or without danger of igniting the gas of the balloon, or so as to serv as a lifeboat, in case of the craft falling into water.

safety-line 'seef-tr,lam n. a line attacht to the bridle of a

kite, which acts as a safety-device.

safety-stick 'seef-tr, stik n. a stick attacht like a bowsprit to the front of a (Hargrave) flyer to break or ease the fall of the machine when coming to earth.

safety-valve 'seef-ti, vælv n. [also spelt safety-valv] a valv in the gasbag of a balloon, allowing gas to escape, for safety's sake; a balloon-valv; an escape-valv.

sag sæg intr. slowly descend, as a kite sometimes does; sink,

droop, settle.

sagging 'sægin n. the slack of a kite-string; sag.

sail seel v.

1. intr. fly without visible movement of the wings, as a bird; float thru the air, as a cloud; glide; navigate the air.

2. tr. sail in or thru; navigate: as, to *sail the air.

sailer 'see-lez n. a bird that habitually sails or practises sailing flight, as the albatgess; a sailing or soaring bird.

sailing 'see-lin n. the action or process of one who, or a thing which sails; moving or floating thru the air; soaring; gliding.

sailing-balloon 'see-iny-balloun n. a balloon fitted with sail-like surfaces for propulsion or steering.

sailing-machine 'see-lrn-ma, sin n. a machine or apparatus which sails thru the air; a soaring or qliding machine.

sailing-man 'see-lin, mæn n. a man who sails or soars in the air; a glider.

sail-wagon 'seel, wægon n. a wagon provided with sails or vanes; a wind wagon. sail-wheel 'seel,will n. a wheel or revolving drum containing sails for supporting and propelling a flying-machine; a fanswheel.

saloon sə'loun n. the main cabin of an airship.

samara 'sæmə-zə n. a dry, indehiscent, usually one-seeded fruit, as that of the elm, provided with a wing or aerofoil by which it is wafted thru the air; a key-fruit or key; a pteridium.

double samara, a samara such as the maple fruit, having

samiel 'see-mi-əl n. the simoom.

sand-bag 'sænd,bæg n. a bag used for containing sand-ballast; a ballast-bag.

sand-ballast 'sænd,bælest n. ballast in the form of sand;

sand used as ballast.

sand-column 'sænd,kelem n. a columnelike cloud of sand sometimes formd by a windstorm in the desert.

sand-pillar 'sænd,piloz n. a pillar or column-like mass of sand raised by a whirlwind: a sandspout.

sand-pipe 'sænd,paip n. a pipe-like or cylindrical sandspout formd in an upward rotary air-current.

sand-wind 'sænd, wind n. a sand-laden wind, as a simoom.

scale skeel n. a graded series of values or terms; a gradation.

Beaufort scale, a scale of estimated wind-velocities represented by the numbers 1 to 12, and by a corresponding series of names, introduced into the British Navy by Ad-

miral Beaufort about 1805. scale skeel v.

1. intr. skim or glide thru the air.

2. tr. skim or glide in or thru: as, to *scale the air.

scape skeep n. the shaft, stem, or rachis of a fether; a scapus. scapular 'skæpço-loz n. one of a bundle of fethers which spring from the pteryla humeralis, humeral tract, or upper orm of a bird, at or near the shoulder, and lie along the side of the back; a shoulder fether; a scapulary.

scapulary 'skæpço,lezi n. same meaning as scapular.

scareship 'ske:z, \(\) ip n. (jocular) an airship, real or imaginary, which creates a scare or fright, as by mysterious flights at night; a scare airship.

scepter 'septez n.

broken scepter, the shadow of a person seen on a fog, as from a mountain-top.

school-balloon 'skout-baloun n. a balloon used for schooling or teaching nevices in balloon-work.

scintillation ,sintifice-son n. the twinkling, flickering, or tremulous motion of the light of the larger fixt stars or of

the edges of the sun, moon, and planets, often including changes of color when the stors are near the horizon or when the observer shakes his hed, and due to the irregular refraction by the warm and cold currents of the atmosfere.

scintillometer sinti'lomi-toz n. an instrument devised by Mentigny for mesuring the scintillation of the stars.

scirocco si'zoko n. same meaning as sirocco.

scout skoot intr. observ or explore as a scout; watch the enemy's movements.

scout-airship 'skoot, e:z-sip n. an airship which is used for scoutingspurposes; an aerial scoutingscraft.

scouting-craft 'skou-tin, ksa:ft n. an air-craft used for scouting: a scouting=airship.

scouting-machine 'skoo-tin-ma, siin n. a flyingsmachine designed for military scouting or reconnectering; an aerial

scoutingscraft: a scoutingsairship.

screw sksou n. a cylinder of wood, metal, or other material, having a spiral ridge or thred winding round it, used for fastening things together or for importing motion; also, a rotary, bladed propeller or flyer constructed on the same principle.

aerial screw, a screw propeller designed for use in the air:

an air screw.

double-bladed screw, a propelling-screw with two blades or vanes: a double vaned screw.

double=vaned screw, same meaning as double=bladed screw.

flying screw, see flying=screw.

screw propeller, see under propeller.

tractor screw, a screw propeller which is placed in the front or fore part of an airscraft, thus acting as a tractor drawing the machine forward; a tractor propeller; a front propeller.

screw-blade 'sksou,bleed n. one of the blades or vanes of

an aerial screw, screw propeller, or liftingsscrew.

screw-plane 'sksou, pleen n. an aeroplane or aerofeil in the form of a screw: an air screw: an aerial screw propeller.

screw-propeller 'sksou-pso,pełez n. same meaning as

screw propeller. see under propeller.

screw-slip 'skyou.szip n, the slip of a screw propeller: the drag of an air screw. screw-vane 'sksou, veen n. the vane of an aerial screw: a

screwsblade.

send skad n. arregular fragments or patches of cloud torn from, or floating below, a nimbus or rain-cloud; small detacht clouds moving rapidly under a mass of storm-cloud; fracto-nimbus cloud.

- **scull** skal *intr*. make movements similar to those of one who sculls a boat; make strokes with the outer portion of the wings, turning these parts of the wings at each stroke.
- sea-anchor 'sii,æŋkəz n. a water*anchor attacht to an aircraft, for use at sea.
- sea-bird 'sii,bs:zd n. a bird that lives habitually over or near the sea; a marine or pelagic web-footed bird; a seas fowl. compare landsbird.
- seaboard 'sii,bo:zd n. the sea-shore or sea-coast; the coastline of the sea or ocean.
- sea-breeze 'sii,bziiz n. a breeze blowing from the sea toward the land; a diurnal breeze occurring near the seazcoast, commonly lasting from about 10 o'clock in the forenoon till sunset, compare landsbreeze.

sea-dust 'sii,dast n. dust, usually of brick=red color, borne from deserts for out to sea where it appears as red fog or sirecco=dust, or in blood=rain.

sea-edge 'sni, Ed3 n. the Edge of the open sea or ocean next to the ice-field; the boundary-line between the open and the frozen arctic sea.

sea-horizon 'sri-ho,zai-zon n. the horizon or circle which bounds the view of the observer at sea; the sensible or visible horizon of one who is upon the open ocean.

sea-gull 'sti,gat n. any bird of the subfamily Larinae most of which fly over the sea and inland waters; also, one of certain of the larger terms; a gull.

sea-horse 'sii,he:zs n.

flying seashorse, one of a family of fishes, the Pegasi-

dae, typified by the genus Pegasus.

seam sim n. one of the lines joining the sewd or stitcht edges of the silk or other gores of the envelop of the gasbag of a balloon; the line of union between two contiguous gores.

sea-plane 'sni,pleen n. the plane or level constituting the surface of the sea; the two-dimensional surface of the ocean

or sea.

searchlight 'ss:zt\,lait n. a powerful light or lamp with a parabelic reflector or lens used, as on an airship, for searching out or illuminating distant objects.

seasickness 'sii,siknis n. the state or condition of being

seasick; nausea.

seat-back 'siit,bæk n. the movable back of the seat or chair occupied by the driver, as in a Curtiss aeroplane, by which

the lateral motions of the driver's body are communicated to the balancing-planes. compare body-cradle and shoulders voke.

- secondary 'seken,dezi n. a secondary remex or flight-fether of a bird's wing; one of the large quill-fethers of a bird's wing which are seated upon the forearm, between the primaries and tertiaries.
- section 'sekson n. a cutting or division; a representation, as of an aerofoil or airship as it would appear if cut by an intersecting plane: as, a longitudinal *section, a transverse *section.

fish section, a section, as of a streamline body, which resembles the longitudinal section of a fish, being blunt at one end and tapering at the other end.

- sectional 'sekso-nl adj. characterized by the presence of sections, divisions, or compartments: as, the *sectional construction of a Zeppelin airship.
- self-raising ,self'zee-zin adj. capable of raising or lifting itself into the air: as, a *self-raising, self-sustaining, and self-propelling flying-machine.
- self-register, self'zed31-stəz n. an automatic register or self-registering device, as for an anemometer.
- self-registering ,self/zed51-strin adj. registering automatically; self-recording: as, *self-registering instruments; a *self-registering balloon.
- self-righting ,self'zan-tin adj. capable of righting itself, as a gliding-machine, when capsized or disturbed in its motion or balance.
- self-sustained ,self-sə'steend adj. [also spelt self-sustaind] sustaind or held up in the air by its own power or movement, altho hevier than air, as an aeroplane flying-machine.
- self-sustaining ,self-se'stee-nin adj. capable of sustaining or holding itself up in the air, as a flying-machine.
- semirigid ,semi'zīdīd adj. [also spelt semirigid] partly rīgīd: said of balloons, airshīps, or gas-vessels which are neither wholly rīgīd nor wholly non-rīgīd.
- sennit 'senrt n. [also spelt sennet] flat braided cordage, sometimes used as belting for transmitting power from the motor to the propeller in airships.
- settle 'setl intr. descend gradually; sink.
- sextant 'sekstnt n. an instrument consisting of a graduated arc of a sixth part of a circle, used for mesuring the angular distance of two stars or other distant objects in the sky, or the altitude of a star above the horizon.

shaft Sa:ft n.

1. the main stem or stock of a bird's fether including

both the calamus and rachis; the scape.

2. an axle, commonly an elongated cylinder or but in shape, as that connecting the motor of an airship with the propeller; also, any but revelved by power and communicating its motion to various working-parts or separate machines, as by drums and belts, or by cog-wheels.

sharpshooter 'sa:zp, sou-toz n. one skild in shooting with

firearms, especially with the rifle; a skirmisher.

shear fiz n. a deflection or deviation from the normal path; movement to one side.

shelter-belt 'seltəz,belt n. a forest maintaind as a protection against wind or snow; a shelter-wood; a wind-mantle.

compare wind=break.

- ship \(\int n \) an aerial vessel; an airship; a dirigible balloon.
 shock-absorber '\(\int \) ok-ab, so: z-baz n. a device for absorbing or dedening the shock or concussion experienced by an airship when it lands or comes into contact with any obstacle: a buffer.
- shooting-star 'Sou-tin, sta: z n. same meaning as fallings

short-winged 'je:zt,wind adj. [also spelt short-wingd] having wings that are short; furnisht with short wings.

shoulder 'Jool-doz n. the part of an aerofoil or streamline body just behind the hed; the hinder portion of the entrance of a streamline body.

shoulder-feather 'Sool-der, feder n. same meaning a

scabular.

shoulder-fork '\ool-daz,fo:zk n. the fork or yoke=like part of the movable seat=back, as of a Curtiss aeroplane, embracing the operator's shoulders; the shoulder=yoke: as, *shoulder=fork control.

shoulder-yoke 'Sool-dez, jook n. the yoke or fork-like part of the movable seat-back, as of a Curtiss aeroplane, em-

bracing the operator's shoulders; the shouldersfork,

shoulder-link 'jool-dez,link n. the shoulder-joint of a bird, in the region of which the tertiary fethers are attacht.

shower-cloud 'jou-əz,kroud n. a cumulo-nimbus cloud from whose base a shower of rain, hail, or sleet generally falls; a thunder-cloud

side-plane 'said, pleen n. a plane placed at either side, or near the lateral extremities, of a flying-machine, as for stability.

side-pocket 'said, pokit n. a wind pocket or windbag on the side of a Japanese kite, for aiding stability.

side-rope 'said, soop n. one of two ropes attacht one to each side of a kite, manipulated from the ground so as to restrain the side oscillations of the kite.

side-string 'said, string n. one of the strings at the side of a

kite, attacht to the outer ends of the frame-sticks.

side-to-side 'said-tə,said adj.

1. from one side to the other; from right to left, or vice versa; lateral: as, *side*to*side motion: distinguisht from

up=and=down.

2. related to, or controlling the side to side movements of an air craft; having to do with horizontal steering; right and left: as, a *side to side rudder: distinguisht from up and adown.

side-van 'said,væn n. a van, vane, or wing located at one side of an airship; a side-vane; a side-plane; a side-wing.

side-wind 'sard, wind n. a wind blowing laterally or toward the side; a wind or air-current coming from the side; also, at sea, a beam-wind.

side-wing 'said,win n. a wing or aeroplane located on one side of a flying-machine; a lateral wing; a side-plane.

signal 'signal n. a sign or indication; some conventional object, as a flag, a sound, or a light, displayd so as to communicate information regarding wethersconditions, etc.: as, a hotswind *signal.

ball signal, same meaning as staff-and-ball signal.

bomb signal, a colord-light wether-signal made by means of an explosiv bom thrown to a great height.

cautionary signal, specifically, one of the wind-signals formerly (1871-91) used by the United States government in place of the present storm-warnings.

drum-and-cone signal, a wind-signal consisting of a pendent drum or short vertical cylinder and a cone, displayd in different combinations at European and Colonial stations.

information signal, a triangular red-flag signal formerly used by the United State government (in place of the present storm-warnings) to notify seamen of the advisability of applying for information as to probable storms.

staff-and-ball signal, a wether-signal consisting of three balls arranged vertically above one another upon a staff in

different combinations.

signal-corps 'signl,ko:z n. a corps of the United States ormy charged with signal-work such as telegrafing; an army-corps concernd with signal-servis.

signal-flag 'signl, flæg n. a flag used as a signal or sign, as by the Wether-Bureau; one of a set of flags of different colors, shapes, and markings used for signaling.

- signaling-balloon 'signl-in-bə,loun n. a balloon used for making signals, as in war.
- signal-service 'signl,sm:z-vis n. the service or business of transmitting signals; the occupation of signaling, especially in the drmy: as, to be assigned to *signal-service; also, an organization for the business of signaling, such as the signal-corps.
- silencer 'sai-lon-soz n. a device for silencing or muffling the exhaust of an internal-combustion engin; an exhaust-muffler.
- silk silk n. cloth made from the fine soft threds of the cocoons of the lurvae of bombycid worms cald silkworms, used in making balloonsenvelops and other aerial apparatus.

oiled silk, same meaning as oil-silk.

simoom si'moum n. a hot, dry sand≥wind occurring in the African and Asiatic deserts in spring and summer.

sine-curve 'sain,ke:zv n. [also spelt sine curve, sine-curv] a curv in which the abscissa is proportionate to the angle and the ordinate proportionate to the sine of the angle; a curv of sines; a sinusoid.

single-celled ,singol'seld adj. [also spelt singlesceld] having

but one cell; as a cellular kite.

single-surface ,singəl'sezfis adj. having a single sustainingssurface or aerofoil; having but one aeroplane supportingssurface: compare doublessurface.

sink sink n. a hypothetic point or system of points at which a fluid is being destroyd or absorbd: opposed to

source: as, a source and *sink system.

sink sink intr. [past participle sunk, sunken; preterit sank, sunk] fall or settle downward, as thru the air, by force of

gravity; descend.

sirocco sr'zoko n [also spelt scirocco] a hot, dry, often dust-laden southeast spring and summer wind originating in the high lands of Africa and blowing over Malta, Sicily, and Italy: the same as the wind cald in Northern Africa the "leste," and in Spain "la veche."

sirocco-dust si'zoko,dast n. a seasdust borne in a sirocco

wind.

skid skid n. a sled-like runner attacht to the under surface of an aeroplane or flying-machine as an aid in landing; a landing-skid; a runner.

skid skid intr.

1. slide along after the manner of an automobile the wheels of which are not revolving; slip obliquely thru the

air, as an aeroplane flyer does, or seems to do, when not wholly under the control of the operator.

2. move along on a skid or on skids, as a flying-machine does in landing; slide on the landing-skids or runners.

skid-strut 'skid, stgat n. one of the stguts or braces of the landing-skid of a flying-machine.

skid-wheel 'skid,wril n. one of the landingswheels attacht to or taking the place of a skid in a flyingsmachine.

skim skim v.

1. glide along upon; soar close to.

2. glide or dart along in a smooth even course thru the air; soar.

skimmer 'skiməz n. a bird that skims or shears the water, as any member of the genus rhynchops; a cutwater, shearwater, or scissorbill.

skin-area 'skin, e:-zi-> n. the area of the portion of the surface of a solid body which is immerst in a fluid.

skin-fold 'skin, foold n. the fold or fly in the skin forming the patagium or flying-membrane of a flying animal: as, the *skin-fold of the flying-squirrel.

skin-friction 'skin, fsik) on n. [also spelt skin friction] the friction between the skin or immerst surface of a solid body and a fluid, such as the air, in which the solid body is immerst and thru which it is moving; skin resistance.

skin-frictional 'skin, fsikso-ni adj. of or related to, skin-friction: as, the influence of *skin-frictional error.

skin-resistance 'skin-zi,zistns n. the resistance efferd to the air or other fluid by the skin or surface of a moving aerofeil; skin-friction.

sky skai n. [ploral skies] the region of clouds; cloudland; the hevens; the firmament: often used in the ploral: as, to sail the *skies.

clear sky, a sky markt by the absence of clouds; the sky characteristic of a clear day; specifically, in the United States Wether-Bureau, a sky in which the obscuration is about 3 on a scale of 10.

green sky, a sky which is green in color, usually occurring at sunset.

lamb's = wool sky, a sky characterized by white fleecy patches of cloud against the blue.

livid sky, a sky overspred by clouds of a livid hue; a blackish blue or leden sky.

mackerel sky, same meaning as mackerel-sky.

red sky, a sky which is red in color, usually occurring at sunset.

- sky-aspect 'skai, æ-spekt n. the aspect of the sky. see under aspect.
- sky-battle 'skar,bætl n. a battle fought in the sky; a battle or combat in the air.
- sky-boat 'skar,boot n. a boat or ship for sailing the sky; an airsboat; an airship; a flying-machine.
- sky-climber 'skar,klai-məz n. an airscraft designed for climbring high into the sky; an altitudesmachine; a heights machine.
- sky-craft 'skur,ksuft n. a craft for sailing the sky; a skyboat; an airship.
- sky-cycler 'skai,sai-kloz n. one who practises mechanical flight, or, as it were, cycles about in the sky or air; an aviator.
- **skyey** 'skai-1 adj. like the sky; of or situated in the sky or upper air.
- sky-flight 'skar, frant n. the art of flight in the sky; aerial flight; air flight; aviation.
- sky-flyer 'skar,flai-əz n. [also spelt sky-flier] one who flies in the sky; an air-sailor; an aviator.
- sky-gazing 'skur, gee-zin n. given to gazing or looking expectantly into the sky; prone to look skyward for airships. compare airshipsagazer.
- sky-glow 'skar,gloo n. a peculiar glow recently observed in the sky at Copenhagen and other places.
- **sky-gun** 'skar,gan n. a gan for shooting into the sky; a gun or cannon for firing at airships.
- sky-high ,skar'har, (assumptivly) 'skar,har adj. as high as the sky: very high.
- sky-journey 'skar,d3ezni n. [also spelt sky journey] a journey in the sky; a tgip thru the skies; an airztgip.
- skylight 'skur, lart n. the light of the sky; sunlight as it comes from the sky.
- sky-line 'skarlarn n.
 - 1. the line where the sky and the earth or objects on the earth appear to meet; the horizon-line; the horizon.
 - 2. a line or route of travel or transport in the sky, or thru the air; the sky-way; an air-way, an air-line (sense 2).
- sky-man 'skar,mæn n. [ploral sky=men] a man of the sky; an airman; a sky=pilot; an aviator.
- sky-pilot 'skar,par-lot n. a pilot of the sky; a guide who works in the sky; the steersman of a sky-craft; an air-pilot; an aviator.
- sky-road 'skar, zood n. a road or way in or thru the sky; a highway thru the air or atmosfere; a sky-way; an air-road.

sky-sailing 'skar, see-lin n. the art, occupation, or sport of sailing the skies; air sailing; aeronautics, aviation.

sky-sailor 'skar.see-laz n. a sailor of the sky; an air-sailor;

an airman; an aeronaut; an aviator.

skyscape 'skar, skeep n. a view of the sky; a part of the sky within the observer's range of vision at any moment.

skyscraper 'skai, sksee-pez n. anything which extends or is projected for into the sky or air, as a ball or missil: especially, a very tall steel bilding,

skyscraper-top 'skar-sksee-pez.top n, the top or roof of a

skyscraper or very tall bilding.

skyscraping 'skar, sksee-pin n, the occupation or sport of high flying, or, as it were, scraping or sweeping the sky in flying-machines; sky-sailing; air-flight; aviation.

sky-skimmer 'skar, skimoz n. one who is habitually occupied in skimming or gliding in the sky; a skysailor; an

expert aviator.

sky-skipper 'skar, skipez intr. proceed or fly in the manner of a sky-pilot or aerial skipper; skip along in a flyingmachine.

sky-slide 'skar, stard n. a slide or inclined way in the sky

or air; an aerial chute.

sky-traffic 'skar,træfik n, the traffic of the sky or air; aerial trade, commerce, or travel; air trafic.

sky-voyage 'skar, voi-id3 n. a voyage in the sky; an aerial voyage: an airstrip.

skyward 'skai-wəzd adv. toward the sky or upper air; skywards: hevenward.

skywards 'skai-wəzdz adv. same meaning as skyward.

sky-way 'skar, wee n. the way or highway of the sky; the atmosfere considerd as a road or path of travel; a sky road: as, to travel a thousand miles of *sky=ways.

slack same n, the part of a line, cord, or rope that hangs loose or appears to do so; the sag of a kite-string; the

sleet strit n. hail or snow mingled with rain, usually in fine particles and often driven by the wind.

slider 'slai-dəz n. a gliding-machine; a glider.

slip sup n. the difference between the amount of translatory motion which a screw propeller would have if it were revolving in a solid nut and the amount of translatory motion which it actually has when revolving in the air or other fluid while propelling a vehicle; screwslip; drag.

apparent slip, the slip in reference to the main body of the surrounding fluid (regarded as stationary) rather than with that portion of the fluid which is just in front of, or actually in contact with, the propeller, and which has a certain forward motion; the difference between the translatory speed which a propeller would have if it were revolving in a solid nut and the translatory speed which it actually has when revolving in the air or other fluid while propelling a vehicle: distinguisht from true slip.

coefficient of slip, see under coefficient.

negative slip, apparent slip whose numerical value is less than zero; apparent slip in which the speed of translatory motion which a propeller actually has with reference to the main body of the surrounding air or other fluid is greater than the speed of translatory motion which the propeller would have if it were revolving in a solid nut; apparent slip in which the speed of the ship is greater than the speed which the screw propeller would have if it were traveling in a solid nut.

true slip, the slip in reference to that portion of the surrounding fluid which is immediately in front of, or actually in contact with, the propeller, regardless of the forward motion which this portion of the fluid has relatively to the main body of the fluid: distinguisht from ap-

parent slip.

slip slip intr. move in continuous contact with a surface,

without rolling; slide, glide.

slip-angle 'szip,ængoł n. the angle of slip; the angle between the curv which would be described by a point on a propeller-blade if the propeller were revolving in a solid nut and the curv which is actually described by the same point when the propeller is revolving in the air or other fluid while propelling a vehicle.

slope stoop n.

revolving slope, a revolving sloping structure devised by Merrill to afford a starting-place for gliders or flying-machines.

smoke-balloon 'smook-baloun n. a balloon whose inflatinggas is warm air mixt with smoke and other products of combustion of a fire placed underneath; a fire-balloon.

smoke-cloud 'smook,kzaod n. a mass or cloud of smoke.

smoke-principle 'smook,psinsi-pol n. the principle or natural law by which smoke rises or remains suspended in the air or atmosfere.

smoke-reek 'smook, zik n. reek or exhalation consisting of smoke: smoke fild air.

smuggle 'smagel v. import or export secretly or in a manner forbidden by law.

smuggler smaglez n.

1. one who smuggles.

2. an air-craft specially adapted to, or engaged in, smug-

ling

snow snoo n. the white, crystallin precipitate falling from the atmosfere in cold wether, formd by the condensation and freezing of the watersvapor in the air and aggregation of the icescrystals so formd: also, a fall of this matter; a snowfall; a snowsterm.

diamond snow, fine particles of snow suspended in the air and glistening in the sunshine, occurring in Russia.

snow-banner 'snoo,bænoz n. a long divergent beam or streamer from the top of a mountain, sometimes visible at a distance of 30 or 40 miles, and due to the sunlight on fine particles of snow in the air-currents diverted upward by the mountain when strong winds prevail.

snow-blink 'snoo,blink n. the peculiar reflection that arises from fields of ice or snow; ice-blink; snow-light, compare

water=blink.

snow-craft 'snoo,ksa:ft n. craft or knowledge about snow and the best methods of combatting it, as in mountaineering.

snow-crystal 'snoo,ksistl n. a crystal of snow; one of the

minute crystals in a snowflake.

snow-dust 'snoo,dast n. dust composed of particles of snow; fine snow such as that driven along in the porga; snowedust.

snowfall 'snoo,fc: n. the falling of snow; a quiet fall of snow; also, the amount of snow falling in a given time, mesured by its depth either actually as it has fallen or as melted into water.

snow-field 'snoo, frild n. a field or wide expanse of snow, especially when permanent, as in the polar regions.

snowflake snoo, freek n. a flake or small fethery mass of falling snow.

snow-gage 'snoo,geed3 n. [also spelt snow-gauge] a receptacle, commonly a galvanized iron cylinder, used for catching falling snow and gaging or mesuring the snowfall.

snow-ice 'snoo, as n. ice formd by the freezing of slush or compacted or half-melted snow, especially as occurring in

ponds, etc.: distinguisht from black ice.

snow-light 'snoo, last n. same meaning as snow-blink.

snow-line 'snoo, ann n. the line above which there is perpetual snow; the limit, on a mountain-slope, above which there is continual snow all the year round.

snow-sand 'snoo, sænd n. sand-like snow raised by the wind,

as in the porga; snow-dust.

snow-spectacles 'snoo, spekta-kalz n. pl. a kind of spectacles or shield with narrow slits, designed to protect the eyes from the glare of the snow.

soar so:z intr. mount on wings, or as on wings, thru the air; rise aloft and remain on the wing without visible movements of the pinions; fly easily to a great height with but little advance in any direction; sail on the air; glide.

soar so: z n. height attaind in soaring; the range of one that soars.

soarer 'so:-zəz n. a bird which habitually soars.

soaring 'so:-zm n. the action of the verb soar; the act or process of flying easily and lightly upward with or without wing-movement; the action of sailing on the air.

automatic soaring, soaring performd by an air-craft by automatic means; soaring by means of self-acting mech-

anism.

dynamic soaring, soaring which depends upon want of uniformity of the wind, in distinction from soaring in a wind which is uniform and has an upward velocity-component.

soaring-energy 'so:-zin, Enez-dzi n. Energy of soaring.

soaringly 'so:-zin-li adv. as if soaring; so as to soar; with

an upward motion or direction. .

soaring-machine 'so:-zin-mə, Siin n. a machine designed for soaring or practising soaring flight; a gliding-machine; a glider.

soaring-velocity 'so:-zin-vilesi-ti n. velocity or speed of

soaring or gliding.

solano sə'la:-no n. an easterly or southerly wind occurring in Spain or on the northern coast of the Mediterranean Sea.

somersault 'saməz,sc:lt n. [also spelt sommersault] a complete turn in the air; a revolution or rotation in the air, usually about a transverse axis.

sonora sə'nə:-zə n. a sterm occurring in parts of southern

California; also, an immense thunder-cloud.

soul soot n. the loose dry pith, in the form of a series of caps or thimbles, in the calamus, tube, barrel or quill of a bird's fether.

sound sound v.

1. tr. mesure the depth of; fathom; as, *sounding the ocean of air.

2. intr. use sounding-apparatus, as in finding the depth of the air below an air-craft: as, *sounding for the bottom or terrain.

sounding-balloon 'soun-din-bə,loun n.

1. a balloon used for sounding or investigating the air

or atmosfere, as a small secondary balloon used by aeronauts for detecting air-currents at some distance from the main balloon.

2. a small unmand hydrogen-fild balloon, now usually made of thin rubber, carrying meteorological instruments and dispatcht to great altitudes where the gasbag usually explodes allowing the instruments to descend slowly by the aid of a parachute; a ballon sonde.

source solves n. a hypothetic point or system of points at which fluid is being continually generated or produced:

the opposit of sink.

line source, a source in the form of a line; a linear source.

point source, a source consisting of a single point.

source and sink system, a hypothetic system in which fluid is being produced (at a source) and made to disappear (at a sink).

span span n. the transverse dimension of an aeroplane or other aerofoil; tip-to-tip mesurement; extent of stretch;

expanse; spred (sense 3).

spar spars n. a stick or piece of wood of considerable length as compared with its thickness, forming some part of an airship, as a strut, must, or brace; a round stick of timber; a pole.

spark-break 'spazk,bzeek n. the break or breaking of the electric circuit at the spark-gap of an internal-combustion

engin, in the make-and-break system of ignition.

spark-gap 'spazk,gap n. the gap or open space between the electric terminals where the sparks are formd which are used in the make-and-break system of ignition.

speaking-trumpet 'spii-kin,trampit n. a trumpet-like instrument used for speaking at a distance; a megafone.

spear-kite 'spi:z,kait n. a kite whose frame consists of two sticks of unequal length crost at right angles, and which therefore resembles in shape the hed of a spear.

specter 'spektəz n. [also spelt spectre] a startling cloudeffect in which the observer sees his own shadow cast upon the clouds or on thin fog (with a circle of glory around the hed).

speculum 'spekço-ləm n. [ploral specula, speculums] an ocellus or eye-spot, as of a peacock's tail; also, the mirror of a wing, a specially colord, often irridescent area on some of the flight-fethers; the mirror.

speed sprid n. rapidity of movement; swiftness; velocity.

air speed, the speed of a flying-machine relative to the air thru which it is passing; distinguisht from land speed.

land speed, the speed of a flying-machine relative to the land-surface or earth beneath: distinguisht from air speed. law of corresponding speeds, the law that when the speed of a given air-craft or model is to that of another similar craft as the square roots of their linear mesurements, their resistances are as to their respective masses, or as the cubes of their linear mesurements.

speed sprid intr. [past porticiple and preterit sped, speeded] make progress; fly along: as, the machine *sped rapidly on. speed-circle 'sprid.spzkoł n. a circular flight made at spe-

cial speed; a circular speed-flight.

speed-flight 'sprid, frait n. a flight made at special speed, as by balloon or aeroplane; a swift flight; a speed test.

speeding 'spri-din n. the action of putting on speed or going at a rapid gait in an airship; the practis of making speedflights.

speed-prize 'sprid,psarz n. a prize, premium, or trofy efferd for or won by making a speed-record in a flying-machine;

a speedstrofy.

speed-test 'sprid, test n. a test or trial of the speed of a

flying=machine; a speed=trial.

speed-trial 'sprid,trai-ol n. a trial of the speed of an airship; a flight or race in which speed is tested; a trial speed-flight; a speed-test.

speed-trophy 'sprid,tgoo-fi n. [also spelt speed-trofy] a trofy or prize offerd for or won by making a speed-record

in a flying-machine; a speed-prize.

sphere sfi:z n. [also spelt sfere] the gasbag (of a sferical

balloon)

spherical 'sfezi-kəl adj. [also spelt sferical] having the form of a sfere, ball, or globe, as a balloon; globular, round, sferic. spherical 'sfezi-kəl n. [also spelt sferical] a sferical balloon. spheroidal sfi'zoi-dł adj. [also spelt sferoidal] having the

the shape or character of a sfereid; resembling a sfere in form, but not quite sferical, as an ellipsoid of revolution; nearly sfere-shaped: as, a balloon of *sferoidal shape.

spider-web 'spar-dəz,web n. a device used for holding a balloon in place during inflation, consisting of a stout rope encircling the netting (and fastend and readjusted to the netting from time to time by snap-hooks), with lateral ropes extending radially from it to timbers sunk in the ground at intervals around and at some distance from the balloon.

spindle-shaped 'spindl, Seept adj. shaped or formd like a spindle used in hand-spinning; circular in cross-section and tapering from the middle toward each and; fusiform;

as, a *spindle-shaped balloon.

spinning-screw 'spinin, sksou n. a toy flyer of cordboard or metal, consisting of an aerial screw with two or more blades, attacht to a spindle around which a string is wound, and which is set moving or spinning by briskly polling and unwinding the cord.

spiracle 'spai-ze-kel n. an aperture or erris; one of the breathing-holes or external errises of the tracheae or

windpipes of an insect's body.

spiral 'spar-zəl adj. of or resembling a spire, coil, helix, or whorl; winding or circling and at the same time advancing, rising, or falling; proceeding or formd like a screw-thred; helical, helicaid: as, a *spiral flight.

sprag spsæg n. a short wooden prop.

spray-shield 'spsee, Stild n. a shield, as that just back of the elevating-hydroplane of a Curtiss hydro-aeroplane, for protecting the craft from the spray rising from the water beneath.

spread spsed n. [also spelt spred]

1. expansion; the state, or the capability of being out-

spred: as, the peacock's tail has an imposing *spred.

2. the expanse or area of surface; the extent or amount of supporting surface presented by a wing, tail, or aerofoil: as, the *spred of a peacock's tail; foll *spred of tail; the altitude machine will have an immense *spred.

3. the distance or mesurement, from tip-to-tip, of the spred wings or aerofoils of a bird, bat, insect, or flying-machine; expanse or extent of wing; wing-spred (sense 1).

spreader 'spseder n. [also spelt spreder] a device made of wood and twine used for spreding or booming the pennant-line of a secondary kite away from the main-line or string of a kite, thus preventing the twirling main-line from weaving the pennant-line around itself.

spur spa: n. a horny outgrowth on the pinion-bone of the wing in certain geese, plovers, pigeons, and other birds.

spuriae 'spço:-zi,i: n. pl. the packet of fethers growing on the spurious or bastard wing, that is, on the winglet or alula of a bird; one of the bastard quills of the alula.

spur-winged 'spa:z,wind adj. [also spalt spur-wingd] having a horny spur on the pinion of the wing, as certain

geese, plovers, and other birds.

squall skwc: ? n. a sudden or violent gust of wind or a succession of such gusts often accompanied by rain, snow, or sleet.

archt squall, a squall morkt by peculiar dense archt masses of dark cloud, furious gusts of wind, and terrents of rain, occurring in tropical regions; a ternado.

squall-cloud 'skwc:1,kzood n. the roll-cloud in front of and above a squall of wind or in front of a thunder-storm cloud.
squall-wind 'skwc:1,wind n. a squally wind, such as the out-

blowing wind due to the kick of a thunder scloud.

squally 'skwc:-li adv. abounding with squalls or strong gusts

of wind; having the nature of a squall; gusty.

stability sto bilitar n. the state, condition, or property of being stable, stedy, or habitually well balanced in the air; the character of equilibrium; equipoise, balance, stableness, stediness.

automatic stability, stability or stediness maintaind in an air-craft by automatic means; balance by means of self-acting mechanism; automatic equilibrium or balance.

directional stability, stability or stediness of an aerodone or air-craft in respect of its direction or translatory motion, or of the course of its flight; directional equilibrium.

dynamic stability, stability of an aerodone or air craft due to the forces acting upon it so as to keep it in motion; dynamic equilibrium: distinguisht from static stability.

equation of stability, the equation which expresses the mutual relations of the factors concernd in the stability of an aerodone or air-craft.

fore-and-aft stability, longitudinal stability.

horizontal stability, the stability or stediness of an aerodone or air-craft in the right-and-left or transverse direction; lateral stability: distinguisht from longitudinal stability.

lateral stability, stability or stediness in a side-to-side direction; transverse balance or equipose; the quality or condition of not tipping sidewise or rolling from side to side during travel; lateral equilibrium; distinguisht from longitudinal stability.

longitudinal stability, stability or stediness in the longitudinal or fore-and-aft direction; fore-and-aft stability; longitudinal equilibrium: distinguisht from lateral stability.

pendular stability, stability or equilibrium resembling that of a pendulum or free-swinging hanging body: as, the

*pendular stability of a helicopter.

rotative stability, stability of an aerodone or air-craft in respect of its rotativ or rotary motion around a vertical axis, or an axis perpendicular to its flight-path, and resulting from the interaction of the motions involved in the maintenance of lateral and directional stability.

static stability, stability of a material object which is stationary or motionless; static equilibrium: distinguisht from

dynamic stability.

stability-control stə'biliti-kən,txəol n. the control or contgollingsmechanism of the stability or equilibrium of an airscraft.

stabilize 'stee-br,laz v. [also spelt stabilise] render stable

or stedy; equilibrate; balance.

stabilizer 'stee-bi,lai-zəz n. [also spelt stabiliser] a device which stabilizes or balances an airzcraft, either laterally or longitudinally; specifically, a stabilizing-plane; a balancer; an equilibrator; also, one of the pearsshaped protuberances at the end of the gasbag of a dirigible balloon, as the Clement-Bayard, serving to stedy the craft in flight.

stabilizing-fin 'stee-br-lar-zin,fin n. a fin or fin-like aerofoil used for stabilizing or balancing an air-craft; a ver-

treal stabilizingsplane.

stabilizing-plane 'stee-bi-lai-zin, pleen n. an aeroplane used for stabilizing or balancing an air-craft, as an aileren, fin, or rudder; a balancing-plane.

stabilizing-rudder 'stee-bi-lai-zin,zadəz n. a rudder or rudder-like plane used in stabilizing or balancing an air-

craft; a balancing=rudder; an aileren.

stabilizing-surface 'stee-bi-lai-zin, serfis n. a surface or aerofoil used in stabilizing or balancing an aircraft; a balancing surface.

stable 'stee-bal adj. firm, stedfast; not easily overthrown or thrown out of balance in the air; well equilibrated during

flight: stedy.

stagger 'stægez v. arrange (or arrange the ports of) in zigzag or stept order or series: as, *staggerd surfaces; a *staggerd biplane; a *staggerdetooth gear.

stake-balloon 'steek-balloun n. a small captiv balloon used

as a stake, mork, or limit in a flyingscourse.

standard 'stændəzd n. the two vanes, webs, or vexilla of a

bird's fether, taken together.

star sta: n. any celestial body which appears regularly and constantly as a point of light; especially, one of the so-cald fixt stars. (see below.)

fixed star, one of the self-luminous stors at a great distance from the earth, which remains practically fixt in its position relative to the other stors of the same class: distinguish from the planets, the sun, moon, comets, and the like.

starboard 'sta:z,bo:zd, 'sta:z-bozd adj. on that side of an air-craft which is on the right as one faces the bow: as, his *starboard wing: the opposit of larboard and port.

star-chart 'staz,tsazt n. a chart of the stars; a map of the

hevens; an astrografic chart.

start sta:zt intr. begin to move or fly; set out on an airstrip; get off.

start stazt n. the action of the verb start; a starting or de-

parture from the earth; a get-away or get-off.

running start, a start (of a flying-machine) which is preceded by a run along the ground; a get-off accomplisht by means of running, as on storting-wheels; as, the *runningstart system.

starter 'starter n. an aeronaut or a balloon that starts out for a trip or voyage, especially among others, as in an air-

race; a competitor in a balloon-race.

starting-area 'stortin, e:-zi-> n. an area of tract used for starting or launching airscraft; a startingsfield; a startings

starting-catapult 'stoztin, kæta-palt n. a catapult-like device used for starting or launching an air-craft: a starting-

derrick: a pylon.

starting-crank 'startin, ksænk n. the crank by which the shaft of an internal-combustion engin is turnd, by hand, in order to start it or set it in motion.

starting-derrick 'startin, dezik n. a derrick or frame for raising and dropping the weight used in storting or launching a flying-machine; a launching-derrick; a catapult; a

starting-device 'startin-di, vais n. a device for starting an airscraft in flight; a stortingsmechanism; a launchingsde-

starting-field 'startin, field n. a field or tract of ground used for storting or launching airscraft; a stortingsarea; a startingsground.

starting-gear 'stortin, giz n. the gear or apparatus in an airscraft which is used in starting the machine in flight;

as, a wheeld *storting=gear.

starting-ground 'startin, ground n. a tract of ground used for storting or launching airscraft; a stortingsarea; a

starting=field.

starting-impulse 'startin, im-pals n. the impulse of starting; the impulsiv or compelling force by which a craft is started; the initial thrust by which a flying-machine is launcht into the air.

starting-line 'startin,lain n. the line (on the ground) from which an airship storts, as when making a test flight.

starting-mechanism 'stoztin, meka-nizam n. any mechanism used in storting or launching an air-craft; a stortingdevice; a launching=apparatus.

starting-place 'startin, place on the earth from

which an airship storts or ascends into the air; a stortings point.

starting-point 'startin, point n. a point or place on the earth from which an airship starts or ascends into the air; the opposit of finishing-point; also, a starting-place: as, a raised *starting-point.

starting-rail 'startin, zeel n. the monorail used in storting or launching some flying-machines; a launching-rail.

starting-system 'staztin, sistem n. a system or method of starting or launching air-craft.

starting-track 'stoztin,træk n. a track used in storting an aeroplane or other craft in flight; a launching-rail.

starting-truck 'stortin, trak n. a truck or small wheeld vehicle used for storting or launching air-craft; a truck used as a launching-vehicle.

starting-weight 'startin, weet n. a weight such as in a catapult or pylon, which is allowd to fall and thus furnish an impulse used in starting or launching an air-craft.

static 'stætik adj. of or pertaining to bodies at rest, or to forces in equilibrium; statical. compare kinetic, dynamic, kinematic.

static stability, see under stability.

statoscope 'stætə,skop n. a form of aneroid barometer which shows at a glance any change in the elevation, or rise and fall, of an airship.

stay stee n. a prop or support, as of rope, wire, or wood; a

supporting=rope; a guy. compare brace, sprag.

stay-rope 'stee, zoop n. a stay which is made of rope; one of two long cerds attacht to the outside of the frame of the upper valv of a balloon, used to stedy the position of the balloon during inflation and deflation, to prevent the craft from rolling to the ground.

steady 'stedi tr. make stedy; hold or keep from shaking, reeling, or falling; support; balance; keep firm or stable.

steadying-bag 'stedi-m, bæg n. [also spelt stedying-bag] an air-bag or air-sack inflated by the wind, forming the rear end of a kite-balloon, and aiding in stedying or keeping it stable in the air.

steadying-fin 'stedi-n, fin n. [also spelt stedying-fin] a fin-like aerofoil placed at the stern of a dirigible balloon for the purpose of stedying or maintaining the stability of the craft; a fin-like stabilizing-plane or balancing-surface.

steadying-plane 'stedi-in, pieen n. [also spelt stedyings plane] an aeroplane or aerofoil used for stedying an airs craft; a stabilizing-plane; a balancing-plane.

steam-bird 'strim, bB:zd n. an artificial bird, or bird:like

flyer, using steam as a motiv power; a mechanical bird

driven by steamspower.

steam-engine 'strim, end311 n. [also spelt steam engine, steam: engin] any engin in which the motory power is steam; a motor driven by steam.

steer stiz v.

1. tr. guide by the movements of a rudder or helm; govern the movements of (an airship) in flight; direct.

2. intr. direct, guide; govern the movement of an airship

in flight.

steerable 'sti:-zə-bəl adj. capable of being steerd or guided in its course; dirigible.

steerage 'str:-zid3 n. the process or action of steering;

quidance, direction, control.

steerage-control str:-zid3-kən,tyool n. the control of the steerage of an airship; the management of an airscraft in so for as it consists in steering, guiding, or directing

flight; the steeringscontrol.

steerageway 'str:-zid5, wee n. [also spelt steerage way] that degree of hedway of an airship which renders steerage possible; forward movement of an airsmachine sufficient to make the craft dirigible or subject to control by the helm.

steerer 'sti:-zəz n. one who steers an airship; a steersman or

pilot.

steering 'stu:-zin n. the action of guiding or controlling the direction of an air-craft in flight; steerage.

direction of an airscraft in flight; steerage.

lateral steering, sidewise steering, as by means of a vertical rudder; steerage to the right or left as distinguisht from steerage up and down; horizontal steering.

vertical steering, up and down steering, as by means of a horizontal rudder; steerage vertically as distinguisht from steerage up and down; the practis of height-control. steering-aeroplane 'sti:-zin,ee-əzə-pleen n. an aeroplane

used for steering; a steering:plane; a rudder:plane.

steering-bag 'sti:-zin,bæg n. a bag in the lower part of a kite-balloon connected by a valv with the air-bag, used in steering the kite-balloon so that the long axis is always in the direction of the wind.

steering-balloon 'str:-zin-balloun n, a balloon capable of

being steerd; a steerable balloon; a dirigible.

steering-bar 'str:-zm,ba:z n. a bar or rod used in steering a flying-machine; a cross-bar pedal for steering: as, a foot *steering-bar.

steering-control 'sti:-zin-kən,txool n. the control or management of the steering of an airship; the steeragescontrol.

steering-device 'str:-zin-di,vais n. a device or apparatus for steering an airship or flyer; a steering-mechanism.

steering-gear 'sti:-zin,gi:z n. the gear or apparatus for steering, quiding, or directing the course of an airship or

flyer: the steeringsmechanism.

steering-lever 'str:-zin,hi-vəz n, a handslever used for working a steering-mechanism; a lever in an aeroplane flyingmachine by the manipulation of which the craft is steerd.

steering-mechanism 'str:-zin, mekə-nizəm n. the mechanism or apparatus for steering an airship; the steerings

steering-organ 'str:-zin,e:z-gon n. an organ or part, as of an aeroplane, which is used in steering: a steering:mecha-

steering-plane 'str:-zin,pleen n. a plane or aeroplane used

for steering; a rudder plane.

steering-rudder 'sti:-zin, zadəz n. a rudder used for steering, as at the rear of an Antoinette monoplane.

steering-wheel 'str:-zin.wiil n. a wheel by which the steersman controls the steering gear of an airship; the helms wheel: the wheel.

steering-wire 'sti:-zin.waiz n. a wire connecting the steering gear of a flyer with the controlling lever or other device at the hand of the operator.

steersman 'sti:zz-man n. [ploral steersmen] the man who steers an airship; a steerer, helmsman, or pilot. stem1 stem n. the forward port of an airship; the bow.

stem2 stem n. the shaft or scape of a bird's fether.

stem3 stem tr. make hedway against by flying or sailing.

stepped stept adj. [also spelt stept] arranged in step-like order, as aeroplane surfaces on the hull of a dirigible balloon; placed like steps; staggerd.

stern str:zn n. the hinder part of an airship; the part furthest from the stem or prow.

stern-rope 'stm:zn,zoop n. a rope at the stern of a Phillips flyer, used for mooring the craft.

stern-rudder 'stm:zn,zAdəz n. a rudder located at the stern or hinder end of an airship; a rear rudder.

sternward 'sta:zn-word adv. directed or proceeding toward the stern or rear; rearward.

stick stik n. one of the wooden rods forming the frame of a kite.

stiffener 'stifo-noz n. a straight bor or red used to stiffen a plain aerofoil or flat supporting-surface. compare rib.

stoop stoup intr. come down; descend; swoop upon prev or quarry, as a hawk does; swoop; pounce.

storm ste:zm n. a disturbance of the normal condition of the atmosfere characterized by winds of unusual direction or force, or by rain, snow, hail, or otherwise; a tempest; specifically, a wind (numberd ii in Beaufort's wind-scale) having a velocity of about 30 meters per second; also, an area of low barometric pressure; a cyclone.

cyclonic storm, a storm that accompanies, or is caused by, a cyclone; a low-area storm.

electrical storm, a condition of the wether or atmosfere occurring in regions of dry air, as at hight altitudes in the western United States, when light shocks and tingling sensations are felt, and brushes and sheets of light are seen on various objects; a violent disturbance of the electrical condition of the earth characterized by strong earth/currents, as thru telegrafelines, occurring oftenest when auroras and sun-spots are frequent; an electric storm.

electric storm, same meaning as electrical storm.

Espy's theory of storms, the theory advanced by Espy that storms are due to the evolution of heat by the condensation of the moisture of ascending air.

eye of a storm, the calm region or part at the center of a violent cyclonic storm, where the clouds clear away and blue sky appears, to be observed chiefly in the tropics.

high=area storm, a storm associated with an area of high

barometric pressure.

land storm, a storm which occurs on or over the land: distinguisht from ocean storm.

law of storms, the law that the center of a storm or hurricane from any given point may be roughly calculated (according to a certain formula) from the average rate at which the barometric pressure is falling; the law of hurricane-distance.

low-area storm, a storm associated with an area of low

barometric pressure; a cyclonic storm.

magnetic storm, an abrupt and usually widespred disturbance of the equilibrium of the magnetic fenomena of the earth causing the magnetic needle to oscillate and become displaced, and often accompanied by electric earth-currents and sun-spet frequency.

ocean storm, a storm which occurs on or over the ocean; a storm at sea: distinguisht from land storm.

revolving storm, a cyclone.

storm-approach 'ste:zm-a,psoot\ n. the approach or encoming of a sterm or of sterms.

storm-area 'sto:zm, e:-zi-a n. the area coverd by a storm or

cyclone; the region lying within the closed isobars which surround a center of low pressure.

storm-belt 'sto:zm,belt n. a belt or zone of maximum storm-frequency; a storm-zone.

storm-bird 'sto:zm,bs:zd n.

1. a petgel; a storm=petgel.

2. a bird, as the sterm-cock, which seems to foretell bad wether by its cries, etc. compare rain-bird.

storm-bound 'ste:zm,baond adj. [also spelt stormbound] bound or hemd in by a sterm; confined or delayd by sterms.

storm-breeder 'ste:zm,bzii-dəz n. a day or a wether-con-

dition which is likely to breed or produce a storm.

storm-card 'sto:zm,kq:zd n. a transparent cord containing lines to represent the wind-directions in all quarters of a cyclonic storm, devised by Reid to be used on a chort as an aid to seamen in avoiding dangerous storms; a storm-circle; a storm-compass.

storm-center 'sto:zm,senter n. the center of a storm; the position of lowest barometric pressure in a cyclonic storm. storm-circle 'sto:zm,sezkel n. same meaning as storm-card.

storm-clock 'sto:zm,klok n. a clock-like apparatus for recording or indicating storms; a meteorograf, especially the one devised and named by Francis Ronalds.

storm-cloud 'ste:zm,kraud n. a cloud that brings or thret-

ens storm

storm-compass 'sto:zm,kampos n. same meaning as storme card.

storm-cone 'sto:zm,kson n. a cone coverd with tord canvas hoisted alone or along with a storm-drum, as a storm-signal. storm-current 'sto:zm,kszont n. an atmosferic current

which accompanies or is related in some way to a storm.

storm-drum 'sto:zm,dram n. a cylinder coverd with tard

canvas horsted along with a storm-cone, as a storm-signal. storm-energy 'sto:zm,enoz-d51 n. the energy within a

storm; the internal energy of a cyclone.

storm-flag 'ste:zm,fræg n. a flag used as a storm-signal.

storm-formation 'ste:zm-fez,mee-Sən n. the formation of a storm; the genesis of cyclones.

storm-front 'stozm,fsant n. the front of a storm.

storm-glass 'sto:zm,gla:s n. a seald glass tube containing an alcoholic solution of camfor, together with crystals of nitgate of potash and ammonium chloride: supposed to indicate (by increase of the precipitate) the approach of storm, but really being nothing but a chemical thermoscope.

storm-kite 'sto:zm,kart n. a kite or kite-like device for

carrying a rope from a ship to the shore in a sterm; a

rope=bearing kite.

storm-like 'ste:zm,laik adj. [also spelt storm like] like a storm; resembling or associated with stormy wether: as, to outride the *storm=like eagle.

storm-motion 'ste:zm,moo-son n. the motion characteristic of sterms; the mode of movement peculiar to cyclones.

storm-path 'sto:zm,pa:θ n. the path, track, or route of a storm; the course of the translatory movement of the center of a cyclone.

storm-proof 'ste:zm,psouf adj. proof agaist sterms or stress

of wether.

storm-signal 'sto:zm,signi n. a signal or sign displayd on seascoast and lakesshores for indicating the expected prevalence of storms or high winds: as, a British or a Canadian *stormsignal.

storm-track 'sto:zm,træk n. the track, course, or route of a storm; the course of the translatory movement of the center

of a cyclone; a sterm=path.

stormward 'ste:zm-wəzd adj. turnd or directed toward a storm; facing a storm; stormwards.

stormward 'sto:zm, wezd adv. toward a storm; facing the

sterm; stermwards.

storm-warning 'ste:zm,we:z-nin n. a warning or admonitory notice regarding an approaching storm.

storm-wave 'sto:zm, weev n. a great wave of the ocean ac-

companying a storm or cyclone.

storm-wind 'ste:zm,wind n. the wind which accompanies, precedes, or forms part of a storm; a severe wind of a minimum velocity of 30 miles an hour on land and 40 to 50 on the sea; a hurricane.

storm-zone 'sto:zm,zoon n. same meaning as storm=belt.

straightaway 'stree-to, wee adj. extending forward in a straight line; having a straight course, without turn or curv; straight-line: as, a *straightaway flight.

straightaway 'stree-to, wee n. a straightaway flight.

straight-line 'street, lain adj. being or occurring in a straight line; in a bee-line; straightaway.

strainer 'stree-nəz n. a screwedevice for straining or tightening a wire; a turnbuckle.

strata 'stree-to n. pl. see straium.

stratiform 'stræti, fo:zm adj. having the form of a stratus, layer, or lamella; stratified.

strato-cirrus ,stree-to'sizəs n. a cloud similar to cirros stratus but more compact and formd at a lower altitude.

strato-cumulus ,stree-to'kçumju-ləs n. a stratum or layer

of low cloud consisting of separate irregular masses: not sufficiently uniform to be pure stratus; cumulo-stratus.

strato-nimbus ,stree-to'nimbes n. stratus cloud causing rain: stratus rainecloud.

stratum 'stree-tom n. [ploral strata] a layer of any material, as air or cloud: an air-layer.

reactive stratum, a stratum or layer of air which is comprest by and reacts against an aerofoil, as the atmosferic stratum beneath a flying aeroplane or behind a revolving propeller.

stratus 'stree-tos n. [ploral strati] a continuous horizontal sheet or layer of fine-wether cloud, the lowest of all forms of cloud, increasing from beneath and characteristic of areas of high pressure: stratiform cloud; fall-cloud; cloud

of night.

stratus maculosus, mackerel-cloud, mackerel-sky.

stream strim n. a stedy current, as of water or air; a flow;

Gulf Stream, the part of the equatorial current in the waters of the Atlantic Ocean which, having enterd the Caribbean Sea, and past thru it and between Yucatan and Cuba into the Gulf of Mexico and thence thru the straits of Florida, emerges into the Atlantic Ocean, thru which it flows parallel to the American coast as for as Newfoundland, and thence toward Europe.

live stream, the lively or activly moving stream of air or other fluid flowing definitly about a streamline body or

other obstacle: distinguisht from dead-water.

stream-area 'strim, e:-zi-ə n. area of fluid stream; the tract of flow, as of air along the surface of a streamline body.

streamer-cloud 'strii-məz,kraud n. a cloud in the form of a streamer or banner, as the streamer of false cirrus from a

thunder=hed; a banner=cloud.

streamline 'stgrim, lain n. a line of motion in a fluid, as air, which is moving in a stedy stgeam or stgeam system; one of the lines of direction in which the particles of a fluid are stgeaming.

streamline body, a body of streamline or ichthyoid form;

a fish-shaped body.

streamline form, a form characteristic of streamline bodies: ichthyoid or fishlike form.

streamline motion, the motion of a stedy-moving fluid, considerd as made up of particles streaming or coursing along certain lines.

streamline surface, the surface of a streamline body.

strepsiptera ,strep'siptə-zə n. pl. an order of parasitic in-sects (including the genus Stylops) the wings of the male members of which are mere twisted filaments or pseudelytra, the females having no wings.

stretch strets n. reach or extent; wingspred. see frases under wing.

string strin n, the line or cord attacht to a kite and extending to the hand of the person flying it; a kite-string; a kitesline.

stroke strook n. a sweeping movement, as of a wing; one of the two motions of a flapping wing or other reciprocating part. see down-stroke and ub-stroke.

strut strat n. a brace, as in the frame of an airscraft, designed to receive a direct thrust; a support, as of wood or metal, which resists a pressure acting in the direction of its length.

strut-socket 'strat, sekit n. a socket into which a strut fits; a hollow piece of metal or other material into which the

end of a brace or support rests or is fastend.

subalary ,sab'se-la-zi adj. situated below the wings. subtorrid ,sab'tozid adj. same meaning as subtropical. subtropic ,sab'tropik adj. same meaning as subtropical. subtropic ,sab'tropik n. a subtropical region.

subtropical ,sab'tropi-kol adj. having a climate or charac-

ter between tropical and temperate; quasiterid; subtropic. suction-anemometer 'sakson-æni, momi-toz n. an anemometer for mesuring the velocity of the wind by means of the suction or decrease of barometric pressure produced in a tube by the passage of the wind across the open end of the tube.

sulphur-rain 'salfəz,zeen n. [also spelt sulfur-rain] same meaning as yellow rain. see under rain. summer-cloud 'saməz,klood n. cumulus cloud; day-cloud. summer-lightning 'saməz,lait-nin n. sheet lightning without thunder, the result of a storm at a great distance; heat-lightning.

sun-dog 'san,do:g n. a mocksun; a parhelion.

sunset 'san, set n. the descent of (the upper lim of) the sun below the horizon at evening; also, the cloud-effect or other atmosferic fenomena accompanying the setting of the sun; and, the time when the sun sets; sundown; evening.

double sunset, a sunset in which the sun is seen to set twice by the same observer who, just after witnessing the first sunset, rises in an airscraft beyond the limits of the earth's shadow, or above the twilight-curv, whence he sees the sun rise again (in the west), and subsequently set for

the second time.

red sunset, a sunset in which the sky is red; specifically, one of a series of remarkable sunsets, such as those of the years 1883-84, in which the red sky is due to the reflection of the sunlight by dust>particles carried to great heights as the result of volcance eruptions.

sunshine 'san, Sain n.

bright sunshine, specifically, sunshine which is sufficiently bright to be recorded by a Campbell-Stokes sunshine-recorder.

sunshine-recorder 'san-san-san-zi,ke:z-dəz n. an instrument for recording the length of time the sun has been shining:

as, Callendar's *sunshine recorder.

sun-shower 'san, squ-ez n. a shower of rain falling (on a warm summer day) from a passing cumulus cloud during a time and in a region otherwise sunny.

sun-stricken 'san, striken adj. stricken by the sun; affected

with sunstroke; sunstruck.

sunstroke 'san,strook n. acute prestration from excessiv heat of the sunshine or wether.

sunstruck 'san, strak adj. overcome by the heat of the sun; affected with sunstroke.

sunward 'sanward adv. toward the sun; sunwards.

superaeroplane ,sçupəz'ee-əzə,pleen n. (fanciful) one of

the upper aeroplanes of an airship.

superimpose, scupez-im'pooz tr. impose or lay en, over, or above something else, as one aeroplane above another; superpose.

superpose, sçupəz'pooz tr. lay or place upon or over something else, as one aeroplane above an other; superimpose.

superposition ,scupez-pe'zisen n. the act or precess of superposing; the placing upon, above, or over; a laying or being situated upon, above, or over something else.

supersurface 'scuper, sezfis adj. [also spelt supersurface] carried on or occurring above the surface of the earth: as,

*supersurface traffic.

support sə'po:zt tr. bear up, uphold, sustain, especially in

the air; keep or prevent from falling.

support so'point n. the action of supporting, upholding, or sustaining, especially in the air; sustaining-power, sustaining-effect; also, that which upholds, sustains, or keeps from falling; a prop, a base.

supporting-device sə'pə:z-tıŋ-dı,yaıs n. a device for supporting, upholding, or sustaining something in the air; the sustaining-device or sustaining-apparatus of an airship.

supporting-plane sə'po:z-tɪŋ,pzeen n. a plane or aeroplane designed to support an aerial machine of any kind.

supporting-power sə'po:z-tin,pou-əz n. power to support or uphold in the air; capacity to sustain in the atmosfere; ability to keep or prevent from falling.

supporting-reaction sə'po:z-tɪŋ-zi,æksən n. a reaction which tends toward, or effects, support; sustaining-reac-

tion; supportingseffect.

supporting-rope sə'pə:z-tin,zəop n. one of the ropes which support the basket or car of a balloon, or connect it with the gasbag above.

supporting-surface so'po:z-tin,serfix n. a surface which supports, upholds, or sustains something in the air; a sus-

tainingsurface.

surf saizf n. the disturbed portion of the air or atmosfere next the surface of the earth, likend to that of the sea as its waves break upon the shore.

surface 'serfis n. the bounding or limiting parts of a bedy; the parts of a bedy which are next to the air: the

superficies; the outside.

advancing surface, a surface or aerofoil which advances or precedes another, as the front sustaining-surface of a tandem monoplane: the opposit of following surface.

alternating surface, a surface which is alternated or moved back and forth, up and down, or from side to side;

a surface or plane having a reciprocating motion.

following surface, a surface or aerofoil which follows or comes after another, as the rear sustaining-surface of a tandem monoplane: the opposit of advancing surface.

land surface, the surface of the land or ground. compare

land=surface and water surface.

main surface, one of the principal supporting-surfaces, as in an aeroplane flying-machine; a main-plane.

streamline surface, the surface of a streamline body.

supplementary surface, a relativly small surface or aerofoil which is supplementary to the main surfaces of a flying-machine, as an aileron or rudder; an auxiliary plane.

surface in presentation, the surface which an aerofoil presents to an opposing or sustaining fluid, as the atmosfere

water surface, the surface of the water, as of a lake, river, or sea. compare water-surface and land surface.

surface-wind 'smefis, wind n. a wind near or next the surface of the earth; a ground current.

surfacing 'serfi-sin n. the mode of application of the surface fabric to a wing or aerofoil.

double surfacing, surfacing, as of the main-planes of a flyer, in which there are two layers of fabric applied, with

an air space between them.

surrounding-cord sə'zaun-dın,ke:zd n. the cord which surrounds the frame of a kite; the string which is fastend to or past around the ends of the sticks of a kite:frame and to which the covering is pasted.

survey sez'vee tr. overlook, view at large, as from a balloon; unspect or examin, as a landscape or position; also, determin the boundaries, extent, and position of, by special

means.

survey səz'vee, 'ss:z,ve n. a general view; a comprehensiv prospect; also, a particular view; an examination or mes-

urement in detail, as of a piece of land.

surveying səz'vɛe-ɪŋ n. the ort or process of determining the form, boundaries, area, contour, and position of a portion of the earth's surface from actual mesurment or in some kindred way.

military surveying, an examination of a territory or of an enemy's position, for the purpose of directing military

operations: a reconnaissance.

photographic surveying, surveying carried on by means of fotografy from above, as from an airship.

suspend so'spend tr. cause to hang; hang from something: as, a cur *suspended beneath a balloon.

suspended sə'spendid adi.

1. hanging from something; pendent: as, the balloon had no *suspended cor.

2. hanging self-sustaind, as a balloon in the air; floating

in the atmosfere.

suspender so'spender n. a rope or line by which something is suspended or hung; one of the cords by which the car of a balloon is attacht to the netting above; a suspender cord.

suspender-cord sə'spendəz,ko:zd n. a cord which acts as a suspender; one of the ropes in a balloon by which the car or basket is suspended or hung from the gasbag or keel above; a suspender.

suspending-net sa'spendin, net n. the net of a balloon from

which is suspended the car.

suspending-rope so'spendin, 200p n. a rope from which something is suspended; the rope from which a flying-machine is suspended during tests, as in the elevated railway proposed by A. Goupil; the rope or line by which a kite is flown or kept suspended or aloft in the air; a rope kite-line.

aspension so'spenson n. the act of suspending or the state

of being suspended; the act or state of hanging from a support: the condition of being held up or kept afloat, as in the air: sustention.

flexible suspension, suspension by means of flexible supports or suspenders, as of the basket or car of an ordinary

suspension-cord sə'spen(ən.ko:zd n. same meaning as susbension-line.

suspension-line sə'spen(ən.laın n. a line by which the car of a balloon is suspended or hung to the gas-vessel; a suspension=cord; a suspender=cord.

sustain sə'steen tr. hold up; bear up; uphold, support; hold

suspended; keep from falling or sinking.

sustainable sə'stee-nə-bəl adi, capable of being sustaind or

held up, as a moving aerofoil by the air.

sustainer sə'stee-nəz n. a structure or apparatus which sustains or holds up, as a gasbag or aerofoil; a supportingedevice; one of the numerous narrow aerocurvs, cross-blades, or slats designed to sustain or support the flyingsmachine patented by H. P. Phillips of Harrow, England, in 1890.

sustaining-area sə'stee-nin, e:-zi-ə n. the area of a sustainingsurface; the amount of supportingsurface utilized in

a flyingsmachine.

- sustaining-chamber sə'stee-nin,tseem-bəz n. a gas-chamber for sustaining an airship; a vessel or comportment forming part of a dirigible balloon and fild with hydrogen or other gas in order to support the craft or cause it to float in the air.
- sustaining-plane sə'stee-nin, pleen n. an aeroplane which forms part of a flying-machine used for sustaining the craft in the air; a supporting plane; a supporting surface; a carrying=surface.

sustaining-power sə'stee-nin,pau-əz n. power or capacity to sustain or hold up; supporting-power; buoyancy: as, the

*sustaining=power of the air.

sustaining-screw sə'stee-nin,sksuu n. a screw designed to sustain, support, or lift an air-craft such as a helicopter.

sustaining-surface so'stee-nin, serfis n. a surface or aerofoil which forms part of a flying-machine and is used for sustaining the craft in the air; a supporting surface; a carrying=surface; a sustaining=plane.

sustentation ,sastan'tee-san n. the action of sustaining or state of being sustaind or held suspended, as in the air:

support.

sustention sə'stensən n. the act of sustaining or holding up: sustainment: sustentation: suspension.

swallow-like 'sweto, lark adj. like that of a swallow: as, *swallow-like swiftness.

sweep swiip intr. [past participle and preterit swept] move, or glide along with a swift waving or surging movement, as a bird or a machine in flight: as, to *sweep upward.

sweep swiip n.

1. the action of the verb sweep; the direction of any nonrectilinear motion; the reach or range of a motion or stgoke; a turn, bend, or curv; a rapid survey, as of the earth's surface, or of the hevens: as, a wide *sweep to the left; the *sweep of a wing; beyond the *sweep of the telescope; a grand *sweep of mountain country.

2. the area of the vertical cross-section of the moving stratum or layer of air or other fluid which is assumed to be that to whose inertia the supporting-reaction upon an aeroplane or other aerofoil is due: as, the *sweep of an

aeroplane; the hypothesis of constant *sweep.

sweep-area 'swiip, e:-zi-ə n. the area of the cross-section of the stratum or layer of air or other fluid which is assumed to be that to whose inertia the supporting-reaction upon an aerofeil is due; the sweep of an aeroplane.

sweeping 'swii-pin adj. characterizing the motion of, or described by a body which sweeps along: as, the aeroplane

rose in a *sweeping curv.

swell swel intr. [past participle swelled, sweld, swollen; preterit swelled, sweld] grow in bulk; bulge, dilate, expand, belly; also, increase in intensity or force, as the wind does.

swell swel n. the action of the verb swell; a rise, surging, or bulging, as of the air, the water, or the land-surface; a wave or billow; a surge; a bulge: as, the surging land-scape's *swell; a hevy *swell of the sea.

swerve swe:zv intr. [past participle and preterit swerved, swervd] turn aside suddenly, as an aeroplane sometimes

does from its course.

swerve swm:zv n. a sudden turning aside, as of an aeroplane from its course.

swing swin intr. [past participle swung; preterit swung, swang] move to and fro; escillate; glide or fly with a free swaying motion: as, twice he *swung round the field.

yearly swing of the atmosphere, the yearly to-and-fro movement of portions of the earth's atmosfere; the annual escallatory motion of the aerial ocean resulting in accumulation of air over the land in winter and over the sea in summer, as shown by changes in barometric pressure.

swirl swe:zi n. a whirling motion; an eddy of air; a gyra-

tion; a whirl.

swirl swb:zł tr. [past participle and preterit swirled, swirld]

whirl thru the air; send whirling.

switchback 'swits, bæk adj. characterized by back and forth or alternate motion thru the air; zigzag: as, *switchback hoverings; the *switchback theory; a *switchback flight path.

switchback 'swits, bæk n. a switchback flight; an aerial zig-

zag.

swoop swoup v. [past participe and preterit swooped, swoopt]

 intr. rush or sweep downward; as a hawk or other bird of prey does upon its quarry or victim; descend swiftly and at a sharp incline thru the air; stoop.

2. tr. descend upon suddenly and swiftly and seize while

on the wing; take or capture with a downward sweep.

swoop swoup n. a sudden pouncing or downward sweeping movement in flight: as, the *swoop as a feature in aerial warfare.

symplesometer ,simpl-1'somi-toz n. an instrument for mesuring the pressure of a current; also, a form of barometer.

tack tack n. a temporary change of a few points in the direction of sailing, as in order to take advantage of a sides wind; one of a series of movements of a water-ship to starboard and port alternately out of the general line of her course.

tack tæk intr. change the course of a ship, as by turning her hed toward the wind, etc.; shift one's course, veer.

tacking 'takin n. the action of the verb tack; veering.

1. the posterior extremity of an animal, especially when consisting of an appendage prolongd beyond the rest of the body; the caudal appendage; the cauda; also, in birds, the tailsfethers, collectively; any appendage resembling the tail of an animal or bird, or placed in a similar relative position; a rear extremity.

tail of the wing, see under wing1 (sense 1).

2. the cord or strip with pieces of paper or other material knotted to it at intervals, attacht to the lower part of a kite; a balancing stail.

3. an aerofoil or other part attacht to and extending out behind a flying-machine and used as an aid in balancing or steering, or as a support for some balancing- or steering-device; sometimes, specifically, a rear horiental plane attacht to or intersecting the rear rudder; a rear directiv organ or balancer; a trailer: as, a cellular *tail.

negative tail, a tail, in an airscraft, which is conceived as acting in a negativ manner. distinguisht from positive

positive tail, a tail, in an airscraft, which is conceived as acting in a positiv manner, distinguisht from negative

4. the neck of the gasbag of a balloon.

5. the part of a streamline body behind the buttock; the posterior extremity of a streamline body.

tail-area 'teel.e:-zi-> n. the area of the tail of a bird, as at

maximum or minimum spred.

tail-boom 'teel,boum n, the boom, spar, or pole which extends rearward behind a flying-machine and constitutes or carries the tail: as, the upper and lower *tail-booms converge to a point.

tail-cord 'teel,ke:zd n. a cord serving as, or attacht to, the

tail of a kite.

tail-covert 'teel, kavezt n. one of the covert sethers of a bird's tail.

tailed teeld adj. [also spelt taild] furnisht with a tail: as, a *taild menoplane.

tail-feather 'teel, fedez n. [also spelt tail-fether] one of the main fethers of a bird's tail; a rectxix, a rudder. tail-length 'teel, length of the tail of an aero-

done: as, positiv, neutral, or negativ *tail-length. tail-like 'teel.lark adi. like a tail: resembling a tail in

form or position.

tail-piece 'teel, pris n. the piece or part in a flying-machine which occupies the position of, or acts as, a tail; the tail of an airship.

tail-plane 'teel, pleen n. a plane or aerofoil which forms the tail of a glider or flyingsmachine; a posterior directiv or-

gan or stabilizer.

tail-plumage 'teel, prou-mid3 n. the plumage of a bird's tail. tail-skid 'teel, skid n. a small skid or runner attacht under the tail or hinder extremity of a flying-machine in order to keep the tail off the ground or facilitate its motion along the ground, as in landing. compare wing-skid.

tail-steerage 'teel,str:-zid3 n. steerage or steering by means

of a tail.

tail-wheel 'teel, will n. a wheel attacht under the tail of a flying-machine to support it, or keep it off the ground.

tandem 'tandem adv, one behind the other: in single file: as, two aerofoils placed *tandem.

- tandem 'tændem n. a series in which one is placed behind another; single file: as, a string of five kites flying in *tandem.
- tandem 'tændəm adj. having units, or a series of sımılar purts or aerofeils, placed tandem, or one behind the other: as, a *tandem system of fins; a *tandem menoplane; a *tandem biplane.

target-balloon 'taz-git-bə,loun n. a small balloon, commonly captiv, used as a target, as in firing explosiv shells.

tariff 'tæzif n. a duty or tax, or such taxes collectivly, imposed according to a list, table, or scale, upon goods imported into, or exported from, a country or place; also, a table or scale of charges of any kind.

tectrices ,tek'tgar,siz n. pl. see tectrix.

tectrix 'tektriks n. [ploral tectrices] a covering-fether of a bird's wing or tail; a covert; a wing-covert or a tail-covert.

tegmen 'tegmen n. [ploral tegmina] the covering of the posterior wing of some insects; the fore-wing of any orthopter, corresponding to the elytron or wing-case of a beetle; also, rarely, a tectrix or covert of a bird's wing or tail.

tegmina 'tegmi-nə n. pl. see tegmen.

telebarometer ,teli-bə'zemi-təz n. a barometer which is located at, or furnishes reports from a distance; one of a series of barometers separated from each other by a certain horizontal or vertical distance.

telehydrograph ,tele/hai-dre,gzaif n. [also spelt telehydrograf] a hydrograf which is located at, or furnishes re-

ports from, a distance.

telescope 'teli, skop n. an instrument consisting essentially of a hellow cylinder containing a system of lenses, for looking at or examining distant objects.

telethermograph ,telt'08:z-mə,gza:f n. [also spelt telethermograf] a thermograf which is located at, or furnishes re-

ports from, a distance.

temperature 'tempere,tsoz n. state or condition with regard to heat; the degree or intensity of the sensible heat of a body.

temperature-gradient 'tempəzə-t\oz,gzee-di-ənt n. the gradient of temperature; the rate at which the temperature of the air changes in value, as with change of altitude.

temperature-signal 'tempozo-t\joz,sign\forall n. a signal, sign, or notice regarding the probabilities or the condition of

atmosferic temperature.

template 'templat n. [also spelt templet] a pattern used to indicate the shape which any piece of work is to assume when finisht; a guide; a model.

tenderwing 'tendez, win n. a newcomer or beginner in the art of flight; an aerial nevice or amateur; a fledgling.

tense tens adj. being in a state of tension; stretcht until tight; rigid; not lax; taut, as the envelop of a balloon.

tension-buffer 'tenson, bafoz n. a buffer, as of rubber, as on the axle of a skid-wheel, for providing or regulating tension or strain.

tension-wire 'tenson,warz n. a wire, as in an aeroplane flying-machine, by which a strain of tension is applied; a wire which regulates or provides tensil strain.

terra firma ,tezə'fB:z-mə n.

1. firm or solid earth; dry land, as distinguisht from water; the land.

2. the earth or land, as distinguisht from the air or atmosfere; the ground.

terrain ,te'zeen n. the ground, or any portion of the lands surface.

terrestrial to'zestgi-ol adj. of or pertaining to the earth; earthly: opposed to celestial; also, pertaining to the landarea as distinguisht from the water-area of the globe, or to the land or earth as distinguisht from, or as contemplated from, the air or atmosfere.

tertial 'tsessel n. a tertiary flights fether; one of the pennae or large fethers of a bird's wing of the third set, which

grows on the elbow or upper orm; a tertiary.

tertiary 'tmzsi,ezi n. a tertiary flight-fether; one of the remiges or wing-fethers seated upon the upper arm or humerus of a bird; a specialized inner secondary; one of the innermost remiges of the pteryla alaris; a tertial.

test-balloon 'test-ba, youn n. a small balloon or inflated bladder let fly in the air to test the direction or velocity of

the wind.

tetrahedral ,tetra'hii-dral adj. pertaining to a tetrahedron or to a system of forms to which the tetrahedron belongs:

as, Bell's *tetrahedral kites.

tetrahedron ,tetgə'hii-drən n. [ploral tetrahedra, tetrahedrons] a solid figure or form comprehended under, or bounded by, four planes; also, the regular tetgahedron whose sides are four equilateral tgiangles; the tgiangular pyramid.

thermogram 'θB:z-ma,gzæm n. the sheet record of a self=

registering thermometer.

thermometer θəz,memi-təz n. an instrument for mesuring temperature, as of the atmosfere.

black-bulb thermometer in vacuo, a form of solar-radiation thermometer originated by John Herschel; a mercurial thermometer having the bulb and a portion of the stem coverd with lampblack, the whole being placed in a glass vacuum-tube to prevent loss of heat by convection. It is often used along with a bright-bulb thermometer similarly encased.

Celsius thermometer, a thermometer introduced by Celsius in 1736, in which the zero is at the boiling-point of water, and the 100-degreesmark at the melting-point of ice. This thermometer, by whose use plus and minus degrees in ordinary atmosferic temperatures are avoided, has never been extensively used.

centigrade thermometer, a thermometer introduced by Linnaeus, in which the zero is at the freezing-point of water and the loozdegree-mark at the beiling-point of water. This thermometer is in common use in many countries of the continent of Europe, and is there and elsewhere

extensivly employd in scientific work.

Fahrenheit thermometer, a thermometer devised by Fahrenheit, in which the zero is at 32 degrees below the meltingspoint of ice, and the 212-degreesmark at the boilingspoint of water. This thermometer is in common use in English-speaking countries and in Holland

maximum thermometer, a thermometer which registers the maximum temperature to which it is exposed, as those

of Rutherford, Phillips, and Negretti.

minimum thermometer, a thermometer which registers the minimum temperature to which it is exposed, as the alcohol minimum thermometer devised by Rutherford in 1794.

Réaumur's thermometer, a thermometer in which the zero is at the freezing-point of water and the 80-degree-mork at the boiling-point of water. This thermometer was formerly extensivly used in Germany and Russia.

thermoscope '08:z-mə,skop n. an instrument for indicating minute variations in temperature without mesuring their

amount

thread-feather 'Osed, fedoz n. one of the thred-like or hairlike fethers usually closely associated with the contourfethers of birds; a filoplume.

throttle '0sot! n. a valv, as in the eduction-pipe of a steamengin, for controlling the flow of steam; a throttle-valv.

thrust θsast n. a push or shove; also, the horizontal component of a positiv pressure of the air, as upon an aeroplane or other aerofoil; positiv drift.

thunder 'Oander n. the loud noise which follows a flash of lightning, due to the same discharge of electricity in the air to which the lightning is due, but occurring a little later

than the lightning on account of the velocity of the sound-waves being much less than the velocity of the light-waves.

thunder-cloud 'θAndəz,kr.qud n. a cloud that produces lightning and thunder, usually dense, dark, towering masses of cumulus or stratoscumulus, with a cirrosstratus overflow; a cumulosnimbus cloud; a turreted cloud; a showerscloud.

kick of the thunder-cloud, the kick-like, or sudden outward and downward thrust or posh of a thunder-cloud, due to the expansion of the rising air within the cloud, and producing a jump in barometric pressure and giving rise to squallewinds.

thunder-gust '0Andoz, gast n. [also spelt thundergust] a gust accompanied by thunder; a thunder-squall; a thunder-sterm.

thunder-head 'θAndəz,hed n. one of the round, compact, swelling cumulus clouds which frequently develop into thunder-clouds.

thunder-headed 'θAndəz,hedid adj. [also spelt thunderheded] pertaining to, or like, a thunder-hed: as, a *thunderheded cloud.

thunder-shower 'θandəz, sau-əz n. a shower of rain accompanied by thunder and lightning.

thunder-squall 'θAndəz,skwc: 1 n. a squall of wind accompanied by thunder; a thunder-squat.

thunder-storm 'Oander, stoerm n. [also spelt thunderstorm] a storm accompanied by lightning and thunder, due to a state of unstable atmosferic equilibrium and high relative humidity.

cyclonic thundersstorm, a thundersstorm associated with a cyclone or region of low barometric pressure, and having a progressiv movement which may, however, be quite different from the cyclonic movement of which it is a part.

heat thunder-storm, a thunder-storm having little or no progressiv motion, characteristic of the hot equatorial regions of the earth, and occurring in summer in temperate latitudes.

line thunder-storm, a thunder-storm accompanying Vs shaped isobaric depressions.

thunder-storm belt, a belt, zone, or long narrow area within which thunder-storms occur simultaneously or continuously, and which moves stedily in an easterly direction.

thysanoptera ,0159'nopto-zo n. pl. an order of insects including only the family Thripidae or Thripsidae, with long, narrow, often veinless wings furnisht with a long fringe.

tie ta n. something which fastens or binds; a bend which withstands stress of pull; a wire or other tensionsmember

connecting or holding together two points or parts, as in an aeroplane flying-machine or other air-craft.

tie-rope 'tai, zoop n. a stay rope or stay of a balloon.

tightener 'tai-th-oz n. any device for tightening a wire stay or the like; a wire-tightener. compare turnbuckle.

tiller-rope 'tilez,zoop n. a rope connected with the tiller or steering-gear of an airship.

tilt tilt intr. heel or lean, as a balloon; assume a sloping position, as an aeroplane.

tilt tilt n. a sloping position; an inclination.

tilting-angle 'tiltin, angel n. the angle or degree of inclination which is safe or allowable in driving an aeroplane flying-machine.

time taim n.

apparent time, time as reckond from, or mesured by, the apparent position of the sun; solar time.

central time, the standard time or hour used in the central or third American time-section; the time of the 90th meridian west of Greenwich. It is 6 hours earlier than Greenwich time.

civil time, time as reckond for civil uses, and divided into days, months, years, etc.

colonial time, the standard time or hour used in the colonial or first American time-section; the time of the 60th meridian west of Greenwich. It is 4 hours earlier than Greenwich time.

eastern time, the standard time or hour used in the eastern or second American time-section; the time of the 75th meridian west of Greenwich. It is 5 hours earlier than Greenwich time.

international time, the system of reckoning time, now adopted by many nations, which takes the time of Greenwich, England, as the basis and divides the world into sections in each of which the time is taken as varying exactly one hour from that of the next section; standard time as applied or adopted internationally: distinguisht from local time

local time, the time as recorded or kept at any given locality or place, and determind by the passage of the mean sun over the meridian of that place: distinguisht from standard time and international time.

mean solar time, time as reckond from, or mesured by, the motions of the mean sun, such as indicated by chronometers at sea; mean sun time.

mountain time, the standard time or hour used in the Rocky Mountain or fourth American time-section; the time

of the 105th meridian west of Greenwich. It is 7 hours earlier than Greenwich time.

Pacific time, the standard time or hour used in the Pacific or fifth American time-section; the time of the 120th meridian west of Greenwich. It is 8 hours earlier than Greenwich time.

solar time, time as reckond from, or mesured by, the ap-

parent position of the sun; apparent time.

standard time, the system of reckoning time (in conformity with the international time system) adopted by the railroads, etc., of the United States and Canada on November 18th, 1883, and now in general use in those and many other countries, which takes the time of Greenwich, England, as the basis and divides the world into sections in each of which the time is taken as varying exactly one hour from that of the next section: distinguisht from local time.

tip tip n. the extremity or end, as of a wing; the outer part or lateral termination, whether flexible or rigid, movable or fixt, of a main plane or aerofoil of a flying-machine; also, a small supplementary plane or end-piece at or near either extremity of a sustaining-plane, such as an aileren or winglet, or a rear flap, used for balancing: as, the *tip of a wing; the left *tip of the machine.

from tip to tip, from the tip or outer extremity of one of the wings of a bird or flying-machine to the tip of the other

and opposit wing, when the wings are extended.

tip trp v. [past participle and preterit tipped, tipt]

1. tr. turn from an upright position, as a flying-machine; cause to slant or lean, as a horizontal aeroplane; incline downward; tilt; cant.

2. intr. lean from the normal or usual position; slant

over.

tip-control 'tip-kən,txool n. a device or apparatus for contxolling or regulating the movements or position of the tip or extremity of the plane, wing, or sustaining surface of an aeroplane or flying machine.

tip-feather 'tip,fedoz n. [also spelt tip-fether] one of the fethers at the tip or outer end of a bird's wing: as, the finger-like *tip-fethers of the wings of many soaring birds.

tip-rudder 'tip,zadəz n. a rudder or rudderslike aerofoil located at the tip or outer end of a main sustainingsplane in a flyingsmachine; an aileren.

tip-speed 'tip, spiid n. the oscillatory speed of the tip of a reciprocating wing; the up-and-down velocity of a wings tip in flapping flight.

tonnage 'tanid3 n. the weight of goods or load which ar airship is capable of carrying; the carryingscapacity of ar airscraft.

top-light 'top, last n. a signal-light placed at the top of an

airship while in flight.

topography tə'pogzə-fi n. [also spelt topografy] the detaild description of a particular region, place, or tract of land; a grafic representation of a certain land-area; also, the features of a region or land-area.

torch-bomb 'to:zts, bom n. [also spelt torch bom] a bom or bom like missil which is used as, or which carries or serve as a torch, as for illuminating the terrain, and showing

the position of the enemy.

tornado, toz'nse-do n. [ploral tornadoes] a violent squall or whirlwind of small extent; an archt squall, occurring in tropical regions; in the United States, a violent and rapidly progressiv whirlwind of small radius usually seen as a whirling funnel hanging from a mass of black cloud.

tornado-funnel ,toz'nee-do,fani n. a funnel-shaped for-

mation observe during a ternado; a windspout.

torque to:zk n. the moment of twisting-force; a function serving as a mesure of a turning-force such as that applied to the shaft which drives a propeller; turning-moment; twisting-effect; twist.

tourbillion ,tuz'bili-an n. a device likend to or producing

an effect similar to a whirlwind.

aerial tourbillion, a device consisting of a rotor of segmental section turning on an axis, so made that, if given a sufficient initial rotation and then held in a current of air with its plane face fronting the wind, it will have its speed accelerated and rotate with extreme rapidity.

touring-balloon 'to:-zin-ba,loun n. a balloon designed for

touring or traveling about.

touring-plane 'to:-zij,pleen n. an aeroplane flyingsmachine designed for touring or traveling about; an aeroplane used for making journeys or trips.

tourniquet 'to:z-ni-ket n. [synonymous cognate torniquet] a twistingsdevice sometimes used to steer flightsmodels.

tower 'tou-az intr. soar aloft thru the air, as a bird; rise in vertical or orthogonal flight; mount straight up in flight, as some birds do when wounded or flusht; rocket.

towering 'tau-a-zin n. the action of the verb tower; the process of rising vertically in flight; rocketing: as, the

*towering of hardshit birds.

tractor 'træktez n. that which draws; a device for drawing or polling.

tractor screw, an air screw which draws or polls; an aerial propeller which is attacht to the front of the craft and which thus polls or draws the machine along thru the air, insted of pushing or thrusting it along, as rear propellers do; a front propeller; a tractor propeller.

trade treed n. same meaning as tradewind.

trade-cumulus 'treed,kçumjo-ləs n. [also spelt trade cumulus] small detacht cumulus cloud occurring by day in the region of the tradewind and usually developing no rain.

tradewind 'treed, wind n. [also spelt tradeswind, trade wind] a wind that blows in a regular trade, path, or course, that is, continually in the same direction; one of a system of airscurrents or winds prevailing over the oceans of the equatorial regions, blowing in each hemisfere toward the thermal equator.

trail treel n. the action of the verb trail; a drawing along behind; also, something which trails; a streak; a train.

angle of trail, see under angle.

trailer 'tgee-lez n.

1. a structure which forms part of, and trails along behind, a flying-machine, as a balancing-tail; a tail.

2. a rope or other device which is attacht to and allowd to trail or drag along behind a balloon or airship; a trail-

rope; a drag=rope.

trailing-angle 'tree-lin, ængəl n. the angle of a wing or other aerofoil which is in trailing or rear position; the angle at which the rear port or following edge of an advancing aeroplane trails or is drawn along thru the air as it leaves it behind; the angle of the trailing edge; the angle of trail; the opposit of leading-angle and angle of entry.

trailing-rope 'tree-lin, zoop n. a trail-rope; a trailer.

trail-rope 'treel, zoop n. a rope of definit length which is attacht to a balloon and is sometimes allowd to trail along on the earth in order to lighten the load and thus make the craft tend to rise or glide along at a uniform height; a trailing stope; a trailer; a drag stope; a guide stope.

train treen n. a part which is drawn along behind; a trailing structure; the tail of a bird, especially when long, large, or conspicuous, and whether ornamental or serving as a

steeringsorgan: as, a peacock's *train.

trajectory tro'dsekto-cr n. the curvd path along which a projectil or other body moves in its flight thru the air:

as, the *trajectory of a flying=model.

tramontana, tramon'ta:-no n. the north wind, as that coming from beyond the Alps mountains into Italy and the Mediterranean region. transaquatic ,træns-ə'kwætrk adj. [also spelt transaquatic occurring or carried on over an aqueous surface; over water: as, *transaquatic journeys.

translation ,tgæns'lee-sən n. the process or condition o:

being translated, conveyd, transported, or removed.

motion of translation, motion in which rotation is absent or not considerd; motion in which all parts of a body are considered as moving in the same direction.

translational ,træns'see-so-ni adj. pertaining to or having the character of translation; of motion of translation: as

the *translational efficiency of a helicopter.

transportation ,tgænspoz'tee-son n. the act of transporting or conveying goods or passengers from one place to

another; transport; carriage, conveyance.

trapeze ,txe'piiz n. a swing consisting of one or more cross-bars each suspended by two cords at some distance from the ground, on which feats of strength and agility are performd; also, such an apparatus as attacht to a parachute, glider, or other air-machine.

traveling-speed 'tawlin, spiid n. the speed or velocity at which an aeroplane or other air-craft travels or is capable of traveling thru the air; the rapidity of flight character-

izing a given airship.

tree-top 'tri,top n. the top or uppermost part of a tree: as,
to rise to the height of the *tree-tops.

trend trend n. general course or direction; directional ten-

dency: as, the wind has an ascending *trend.

triangulation ,trai-angio'lee-sən n. mesurement by means of triangles conceived as existing upon the earth's surface or elsewhere; the operation of determining altitude, distance, or position, as of an airship, by calculations from observations made with a theodolite upon points taken as the apexes of triangles referd to a certain base-line.

trim trim n. the state or condition of an airship or of her cargo, ballast, or spars, with reference to her fitness for sailing or flying; adjustment, arrangement: as, the lateral

*trim of an air=craft.

triplane 'trai, pleen n. a flying-machine of the aeroplane type having three sustaining-planes or supporting-surfaces: compare monoplane, biblane, multiplane.

tripping-rope 'tgrpin, 200p n. a rope used in connection with the tgrpping-device or release by which a balloon

water anchor may be relieve of its contents.

trochoid 'tgoo,koid n. a prolate or curtate cycloid; a curv described by a point fixt to a wheel which rolls on a straight line.

trochoidal ,tro'kei-dł, 'troo,kei-dł adj. pertaining to or having the nature of a trocheid: as, *trocheidal curvs, a *trocheidal wave.

trochoidal plane, see under plane.

truss tras tr. tie, bind, fasten; adjust, draw, make fast or

stiffen as with a truss.

truss trus n. a stiff frame; a combination of beams, posts, and struts of wood, steel, or other material, constituting a rigid or unyielding frame, as that of the planes or wings of a double-deckt aeroplane flying-machine.

truss-wire 'tgas, waiz n. one of the wires of a tguss, as in

an aeroplane flying-machine.

tryout 'trai, aut n. the action or process of trying out, as of a

flyingsmachine; a trial or test.

tube-whistle 'tçoub,wisəl n. a light windsblown whistle made of bamboo tubes placed side by side, such as the Chinese sometimes attach to the tail of a flying pigeon.

turbulence 'turbujo-lens n. the state or condition of being turbulent; disturbd state; agitation, commotion, as of the

air.

energy of turbulence, the energy of the turbulence, agitation, or commotion of a fluid, as the air; energy of windsfluctuation; turbulencesenergy.

motion of turbulence, the motion of a fluid, as the air, when in a state of turbulence or agitation; the movement of a fluid in commotion; motion of wind-fluctuation.

velocity of turbulence, the velocity of the motion of tur-

bulence of a fluid, as the air; turbulence=velocity.

turbulence-energy 'tszbjolens,enez-d31 n. the energy of the turbulence, agitation, or commotion of a fluid, as the air; energy of turbulence; energy of wind-fluctuation.

turbulence-velocity 'tszbjolons-vi,losi-ti n. the velocity of a fluid in a state of turbulence or agitation; velocity

of turbulence; velocity of wind-fluctuation.

turnbuckle 'tn:zn,bakel n. a screw device for connecting or drawing together two ports of a wire or metal red; a wire-stightener consisting of a right-hand and a left-hand screw, used for keeping taut the wire stays of air-craft; a stgainer: as, an open *turnbuckle.

turning-point 'thernin, point n. the point or place in the air or atmosfere at which an airship turns, or changes or reverses its course, as in order to return to its starting point.

turtle 'testi n.

turn turtle, turn upside down; capsize: said of an airship.
twilight 'twor,last n. the light from the sky when the sun is
below the horizon at merning and evening; the illumina-

tion after sunset (or before sunrise) produced by the r flection of sunlight from the upper air. compare gloamin glooming, dusk.

twilight-are 'twar-last, a:zk n. same meaning as twiligh

curve

twilight-curve 'twar-lant,km:zv n. [also spelt twilight-curve the curv or arc, sometimes very sharply defined, constituting the visible part of the circular outline or boundary of the projection of the earth's shadow upon the sky, which is the east just after the sun has set and, as a passes to the zenith and thence to the western horizon gradually cuts off the twilight-glow; the twilight-arc.

twilight-glow 'twar-last, gloo n. the glow or luster of th

twilight.

twisting-action 'twistin, æksen n. an action of twisting of

twisting-effect 'twistin-i, fekt n. an effect having the na

ture of a twist or spiral turn.
two-bladed ,tou'blee-did, (assumptivly) 'tou,blee-did ad

having two blades, as a screw propeller.

two-winged ,tou'wind, (assumptivly) 'tou,wind adj. [als spelt two-wingd] having two wings or winglike sustaining surfaces.

tying-point 'tai-in, point n. the point at which the guy-lin or string of a kite is attacht, as to the hanger or bridle; the

tvingsen peint.

typhoon ,tar'foun n. [also spelt tyfoon] a violent hurrican occurring in the China seas and thereabouts, mostly from July to October.

unclouded , an'kkau-did adj. not clouded: as, an *unclouded but misty, sky.

underbody 'Andez, beding not the bedy or framework forming the under part of an airship; the rigid understructure at tacht or suspended beneath the floatsvessel; the fuselage.

underplane 'Andoz, preen n. a stationary plane situated just under a moving or soaring plane; a plane surface, such a level piece of land or a water-surface, lying close be neath an aeroplane or flyer, in flight.

underrun ,Andə'zAn tr. run or pass under or underneath as, the thunder-squall *underruns humad air-currents.

understructure 'Andəz, straktfəz n. a structure unde another; the lower part or parts of an airship, underneat the gasbag; the underbody; the underwork, under-wind 'Ander, wind n. a wind blowing in the under or lower airs; an atmosferic undercurrent: distinguisht

from upper=wind.

underwork 'Andəz,wB:zk n. the framework or other contrivances situated under or beneath the main part of an airship; the lower parts of a dirigible balloon, located underneath the gasbag; the understructure; the underbody.

unmanned ,An'mænd, (assumptivly) 'An,mænd adj. [also spelt unmand] not carrying a man or operator; having no

aeronaut or aviator aboard: as, an *unmand balloon.

untoggle ,An'togal tr. unfasten, disconnect: as, to *untoggle the car.

up-and-down ,Apan'doon adj.

1. characterized by upward movement fellowd by downward movement; going first up and then down: as, a sensational *upsandsdown flight.

2. related to, or controlling up-and-down movement; havto do with vertical steering: as, the *up-and-down and the

stabilizing planes: distinguisht from sidestosside.

up-current 'Ap,kezent n. a current or stream of air coming or going up; a rising or ascending atmosferic current; an upowind

upper-wind 'Appz, wind n. a wind blowing in the upper or higher airs; an upper wind or atmosferic current; dis-

tinguisht from under-wind.

upright 'Ap,zait n. an upright or vertical stick or piece, as in a kite-frame: as, the cross-sticks and *uprights.

uprush 'Ap.ZAS n. a rush, or sudden and forceful movement,

upward or skyward, as of air.

up-stroke 'Ap, strook n. the upward stroke or sweep of a reciprocating part such as a flapping wing; a stroke or beat in an upward direction: the opposit of downstroke.

up-thrust 'Ap,θsast n. a thrust or posh in an upward direction; lift: as, the *upthrust of the wind upon a wing.

vacuum 'vækçu-əm n. empty space; an enclosed space from which the air or other gas has been removed, by means of a pump or otherwise.

forced vacuum, a portial vacuum, or decrease of pressure or density which is forced upon the air or other fluid adjacent to an aerofoil or other surface which is acting upon

it. compare forced pressure, under pressure.

valve vælv n. [also spelt valv] a device or appliance designed to control the flow of a fluid, as gas or air, thru a pipe, outlet, or inlet, as the one inserted at the top of a balloon, for letting out inflatingsgas.

emergency valve, a balloon-valv which works automati-

cally in case of an emergency.

valve-line 'vælv.lain n. Talso spelt valvelinel a line controlling the valy of a balloon.

valve-rim 'vælv.zim n. [also spelt valverim] the rim or marginal part of a balloon=valv.

valve-ring 'vælv,zin n. [also spelt valvering] a ring which

is connected with or encircles a balloon-valv.

valve-rope 'vælv,zoop n. [also spelt valv=rope] a rope controlling a balloon-valv; a valv-line.

valve-tender 'vælv,tender n. [also spelt valv-tender] one who tends or operates a balloon-valv.

valve-string 'vælv,strin n. [also spelt valvestring] the string controlling a balloon-valy; a valv-line or valv-rope.

van væn n.

1. a vane or web of a bird's fether on either side of the shaft; the vexillum; the pogonium.

2. a wing or wing-like organ or structure; a sail.

vane veen n.

1. a wethercock or wethervane: also, a similar device, as in an anemometer.

2. a sail-like or winglike supportings, propellings, or guidingstructure, as one of the blades of an aerial wheel, one of the plates or floats of a windmill, or one of the pieces of fether attacht to either side of the nocksend of an arrow.

3. the web or vexillum of a bird's fether on either side

of the shaft; the pogonium; the van.

vane-wheel 'veen will n. an aerial wheel fitted with vanes

or blades: a screwsvane.

vapor 'vee-pez n. [also spelt vapour] any visible diffused substance, especially feg, mist, cloud, or condenst steam, foating in or obscuring the air or atmosfere; water-vapor; (in fysics) the gaseous form of a substance which is usually solid or liquid: as, mercury *vapor.

vapor-condition 'vee-pez-ken,disen n. the condition of, or

as to, atmosferic vapor or vapors.

vapor-dust 'vee-pez, dast n. atmosferic dust consisting of minute globules of water condenst from aqueous vapor, appreciable by certain optical effects but not visible as fog or haze: dust=vapor.

vapor-laden 'vee-pəz,lee-dn adj. laden or loaded with va-

por, as air.

vaporous 'vee-pə-zəs adj. having the form or nature of vapor: vapory.

vapor-plane 'vee-paz,pleen n. the plane or level at which vapor ferms; the level of condensation; the plane of the altitudes or elevations at which ascending currents of moist air are coold to the dewspeint and begin to condense into visible vapor.

vapor-pressure 'vee-poz,psesoz n. the elastic pressure exerted by any invisible or gaseous vapor, especially that of the water-vapor in the air or atmosfere; vapor-tension.

vaporspout 'vee-pəz, spoot n. same meaning as waterspout.
vapor-tension 'vee-pəz, ten sən n. same meaning as vapors
pressure.

vapor-value 'vee-pəz, væliu n. the value of the water svapor in the atmosfere; the vapor condition, considerd quantitativly, of the aqueous vapor in the air, as at different elevations.

vapory 'vee-pə-zı adj. [also spelt vapoury] composed of or

characterized by, vapor; vaporous.

varnish 'va:z-ni' n. a solution of resinous or elastic material in alcohol or other limpid liquid, capable of hardening into an elastic waterproof and gasproof coating, applied to balloon=envelops to render them impermeable and wether=proof.

veer vi:z intr. turn; shift or change direction; change; also, in meteorology, shift in the same direction as the course of the sun: as, in the northern hemisfere, from east by way

of south to west: said of the wind.

vehicle-speed 'vii-i-kəl, sprid n. the speed or velocity of the translatory motion of a vehicle; the rapidity with which a craft moves thru the air. compare propeller-speed.

velocity vi'lesi-ti n. rapidity of motion; speed or quickness

in movement: swiftness.

natural velocity, the velocity at which an aeroplane or plane aerofoil naturally continues to glide indefinitly.

compare natural gliding:angle, under gliding:angle.

velocity-potential vi'lesiti-pə,tensəl n. a potential, or scalar quantity, whose slope is everywhere equal to the velocity of a mass of fluid in irrotational motion.

venation vr'nee-son n. the mode of distribution of the veins or nervures of an insect's wings; also, these veins collect-

Ivly, considerd as to their arrangement.

Venetian-blind vz'nri-sən,blarnd adj. resembling a certain type of windowsblind made of slats of wood: said of a mode of aeroplanesconstruction: as, the Phillips *Venetiansblind method.

vent-feather 'vent, fedoz n. [also spelt vent-fether] a fether located under the tail, behind the vent or anus of a bird;

one of the under tail-coverts; a fether of the crissum; a crissal fether.

vertex 've:z,teks n. [ploral vertices, vertexes] the point in the

hevens directly overhed; the zenith.

vertical 'veztr-kel adj. of or relating to the vertex or zenith; perpendicular to the plane of the horizon; straight up in the air: that is, not diagonal, slanting, or oblique.

angle of the vertical, the angle between the astronomical zenith and the geocentric zenith. see under zenith. This angle reaches its maximum value in latitude 45 degrees, where it is about it minutes.

vertically 'veztika-is adv. in a vertical manner or direction;

straight up in the air.

vertices 'vezti, siz n. pl. see vertex.

vessel 'vessel n. an airship; an airscraft; a ship, a craft.

vexilla .vek'silə n. bl. see vexillum.

vexillum ,vek'srləm n. [ploral vexilla] the vane or web of a bird's fether on either side of the shaft or stem; the pogonium; the van.

viscosity, vis'kesi-ti n. the state or property of being viscous; the quality of flowing slowly; also, in fysics, internal friction; resistance to the motion of the molecules of a fluid among themselvs: the opposit of mobility.

viscous 'viskas adj. having the property of viscosity or internal molecular friction; characterized by resistance to

internal motion; not mobile.

volant 'voo-lont adj. passing thru the air; flying; able to fly: capable of flight; velitant.

volation ,vo'lee-son n. flight, as of a bird; the power or fac-

ulty of flight; voltation.

volational ,vo'ize-5,3-ni adj. of volation or flight; volta-

tional.
volator, vo'lee-tez n. that which flies; specifically, a flyings

volitant 'voli-tnt adj. flying; capable of flight; volant: as, a bat is a volitant mammal.

volitation ,voli'tee-jon n. the act of flying; the power or capacity to fly; the habitual practis of flight; volation; flight.

volitational ,voli'tee-so-nl adj. of volitation; volational.

volplane 'vol, pleen intr. fly in, or by means of, an aeroplane flying machine; plane, glide, coast: as, while he was *volplaning down to earth.

volplane 'vol, pleen n. the action of the verb volplane: as, hrs *volplane of a mile from the clouds to the ground.

- vortex 'vo:z,teks n. [ploral vortices, vortexes] a whirl of fluid, as the air in a smoke=ring; also, a whirling or gyratory motion; a gyre; an eddy.
- vortex-core 'vo:z-teks,ko:z n. the core or innermost central nuclear part of a vorteks or whirl of air.
- vortex-cylinder 'vo:z-teks,sitin-dəz n. the cylinder=shaped
 port of a vortex; a cylindrical vortex.
- vortex-filament 'vo:z-teks, fila-mant n. the portion of fluid included within a vortex-tube.
- vortex-fringe 'vo:z-teks,fsind3 n. the upward circulatory fringe, or system of vortical currents produced at the edges of a horizontal plane falling thru the air or other fluid.
- vortex-knot 'vo:z-teks,not n. a knot-like vortex; a complrcated gyre or eddy, as in an air-stream.
- vortex-hoop 'vo:z-teks,houp n. an imaginary uncreatable and undestructible vortex in an inviscid gas, shaped like a hoop or half-ring.
- vortex-motion 'vo:z-teks,moo-jon n. the motion characteristic of a vortex; a rotational motion of a flurd in which there is circulation about certain vortex-filaments, and no circulation except about them.
- vortex-ring 'vo:z-teks,zin n. a vortical molecular filament or column returning into itself so as to form a ring composed of a number of small rotating circles arranged like beads on a string, as the air in a smokezring.

vortex roller, a series of vortex-filaments following each other in rapid succession and acting as rollers between the

live flurd and the ded-water.

vortex-train 'vo:z-teks,tgeen n. a train of vortices, as the vortex-cylinders of air, collectivly, left trailing behind an aerofoil in flight.

vortex-trunk 'vo:z-teks,tgank n. a tgunk, twisted column, or helicoid cloud composed of vortex-filaments wound round

each other like the strands of a rope.

vortex-tube 'vo:z-teks,tçoub n. an imaginary tube, within a fluid, whose surface is the locus of vortex-lines thru a small closed curv drawn orbitgarily.

vortical 'vo:z-ti-kəl adj. of or like a vortex or gyre: as, a *vortical system of air-currents.

vortices 'vo:z-ti,siz n. pl. see vortex.

vulture 'valt\3z n. any one of various large birds of prey of the order Raptores, having the hed and neck more or less bare of fethers, and furnisht with powerful beak and claws. wader 'wee-doz n. a bird which wades, as a crane, a stork, or a sandpiper; any bird of the order Grallae or Grallatores.

waft wa:ft n. a form of aerial propeller.

waft wa:ft tr. bear thru a fluid or buoyant medium, as air;

convey thru the atmosfere.

wake week n. the track left by a streamline or other solid body moving thru a fluid; the track or stream of agitated air left trailing behind an aerofoil, aeroplane, or airship in flight thru the atmosfere; also, a track, a course. compare wash.

wake-current 'week,kezent n. a current of, or of the

nature of, a wake.

war-balloon 'we:z-bə,loun n. a balloon used in war; a dirigible or other balloon designed for use in warfare; a military balloon.

war-car 'we:z,ka:z n. an aerial car or vessel designed for

use in warfare: a warship of the air.

war-kite 'wo:z,kuɪt n. a kite used ɪn warfare; a man-lɪftɪng kite used for mɪlɪtary reconnaissance or observation; a mɪlɪtary kite; an observation-kite.

warning 'we:z-nin n. a signal, such as a flag or pennant, displayd as a warning or cautionary notice of approach-

ing winds, storms, hurricanes, etc.

warp we:zp tr.

1. twist out of shape, as a wing or other aerofoil; turn or bend out of a condition of straightness, as the outer portions or lateral extremities of the sustaining surfaces of an aeroplane flying machine; content.

2. move into some desired place or position by means of a warp or rope secured to something fixt; kedge: as, to

*warp a dirigible into her dock or shed.

warping-device 'wo:z-pin-di,vais n. a device or apparatus used in warping or contorting one or more of the aerofoils in a flying-machine; a wing-warping device; a warping-mechanism.

warping-mechanism 'we:z-pin, meka-nizam n. a mechanism for warping the planes or wings of a flying-machine:

a warpingsdevice.

warping-rope 'we:z-pin,zoop n. a rope used in warping or flexing the wing or wings of an aeroplane flying-machine; the cord by which an aerofoil is warpt by the driver of a flying-machine.

war-plane 'wo:z,pzeen n. an aeroplane flyingsmachine designed for use in warfare; an aerial warship of the aero-

plane type.

- wash we: n. the broken or eddying air which is left behind by a flying air-craft or by its propeller; the ded-water or eddy-air in the rear of a moving aerofoil or streamline body. compare wake.
- waste-valve 'weest, vælv n. [also spelt waste-valv] a valv, as in the gasbag of a balloon, thru which gas may be allowd to escape or go to waste; an escape-valv.
- water-anchor 'wc:-təz,æŋkəz n. a special form of anchor adapted for retording the speed or influencing or arresting the motion of a balloon passing over the sea or other body of water.
- water-area 'wc:-təz,ɛ:-zi-ə n. [also spelt water area] the area, surface, or region of the water as distinguisht from the land or air; also, an area or tract of water. compare landzarea.
- water-ballast 'wc:-təz,bæləst n. (sea-term) ballast which consists of water; water used for ballast in a ship.
- water-blink 'wc: təz,blink n. a spot of cloud hanging in arctic regions over open water, the presence of which it servs to indicate. compare snow=blink.
- water-cloud 'wc:-təz,kiaud n. any one of the class of clouds comprizing all but the highest (cirrus) clouds and the cirronebulae, whose component particles are minute droplets of water: distinguisht from icescloud.
- water-drag 'wc:-təz,dræg n. a drag or device attacht to a balloon by a rope and designed for trailing along in the water beneath, as an aid in controlling the motions of the craft.
- water-dropper 'wc:-təz,dropəz n. a cylindric water>container from whose nozzle the water is allowd to drop freely into the atmosfere. The device was invented by Sir William Thomson and is used, as in a balloon, in mesuring the electric potential of the air.

water-flight 'wc:-təz,fzent n. a flight over the water; a flight thru the air above a water-surface; an over-water or

transaquatic flight. compare landsflight.

water-foot 'wc:-təz,fot n. a foot or foot-like understructure in a flying-machine designed to enable the craft to rest or alight upon a water-surface; a water-float attacht to the base of a flying-machine; a water-skid.

water-haze wc:-təz,heez n. atmosferic haze which is made up of particles or minute droplets of water, with or without an admixture of dust or smoke; aqueous haze. com-

pare dustshaze.

water-particle 'wc:-təz,paztı-kəl n. one of the particles or

droplets of water such as water clouds and mist are composed of: a minute globule of water.

water-ship 'wc:-təz,ship n. a ship that sails on the water; a vessel used for navigating the seas or other bodies of

water: distinguisht from aerial ship and airship.

water-skid 'wc:-təz,skid n. a skid or runnerslike understructure in a flying-machine designed to enable the craft to alight and rest upon or to launch itself from, a watersurface; a skid-like water-float or water-foot attacht to the base of a flying-machine.

water-sky 'wc:-təz,skai n. a popular reflection in the sky,

water beneath.

water-smoke 'wc:-təz,smook n. smoke-like or steam-like fog or mist formd over a body of water whose surface-temperature is above the dew-point of the air, which is alredy saturated with water-vapor.

waterspout 'wc:-təz,spoot n. a whirlwind characterized by a huge funnel-shaped mass of mist descending to the surface of a body of water, as the sea, where, picking up water, it forms a column reaching to the clouds; a vapor-

spout; a windspout.

water-surface 'wc:-təz,sbzfis n. the upper or free surface of a body of water; a surface which is of water rather than land: distinguisht from land=surface. compare water surface, under surface.

water-tight 'wc:-təz,tart adj. so tight as to resist the

passage of water; impermeable to water.

wave weev n

1. a continually propagated form which is assumed by parts of a body, as the air, when out of equilibrium.

2. a progressiv oscillation of atmosferic pressure or temperature; also, an advancing movement of large extent in which these are considerably above or below the normal: as, a parometric *wave, a cold *wave.

cold wave, a wave of cold wether; an advancing atmosferre area which is characterized by a temperature which in any part is at least as low as 36 degrees Fahrenheit.

hot wave, a wave of hot wether; a heat-wave.

wave weev v.

1. intr. move up or down or two and fro; undulate; sway: as, *waving wings.

2. tr. move up and down, as a wing; cause to sway.

wave-action 'weev,ækýən adj. actuated by wave motion; moved by an undulating aerofoil or wave-surface, see under aeroplane.

wave-line 'weev,lain adj. having the form of, or related to, the lines or outlines of the waves in a fluid; undulating; wavy: as, a body molded in *wave-line curvs; a flying-machine moving in an undulating or *wave-line course. compare streamline.

wave-surface 'weev, sprfis n.

1. the surface of a wave or undulation in a fluid.

2. a flexible surface or aerofoil which forms part of a flying-machine, and in which a rapid undulatory or wave motion is produced for the purpose of causing the surface to propel or sustain the craft in the air.

wave-train 'weev,treen n. a train or series of waves in a

fluid; a trailing succession of undulations.

weather 'weder n. [also spelt wether] the state of the air or atmosfere with respect to its cloudiness, humidity, motions, temperature, pressure, electrical condition, or other characteristics.

broken weather, unsettled wether.

clerk of the weather, a humorous personification of the influences controlling the wether; Old Prob; also, the director of the British Meteorological Office or the meteorological department of the Signal-Service of the United States.

falling weather, wether in which there is, or is liable to be, a precipitation or fall of rain, snow, or hail; rainy or

snowy wether.

radiation weather, wether in which radiation of heat from the earth's surface is especially noticeable; the clear dry atmosferic condition which prevails within areas of high barometric pressure or descending air when terrestrial radiation of heat is at its maximum.

Weather-Bureau 'wedoz,bju:-zo n. a bureau of the Department of Agriculture of the United States government having charge of the forecasting of the wether, issuance of

of wether-warnings, display of wether-signals, etc.

weather-card 'wedoz,ko:zd n. a cord on which is a diagram showing the average or typical wether-conditions on each side of moving areas of high or low barometric pressure.

weather-case 'wedoz,kees n. a case holding instruments for observing the wether; a cupboard containing meteorologi-

cal apparatus.

weather-change 'wedoz,tseends n. a change in the wether; an alteration of general atmosferic conditions.

weather-chart 'wedoz,tsa:zt n. a wether-map.

synoptic weather-chart, a synoptic chart of the wether;

a wether-map which affords a synopsis or general view of the meteorological conditions; a synoptic wether-map.

weather-condition 'wedez-ken,disen n. one of the conditions, circumstances, or characteristics of the wether:

commonly used in the ploral.

weather-cycle 'weddz,sai-kał n. a cycle or round of wether-conditions; one of a series of recurrent periods of time, of equal length, in each of which a certain succession of atmosferic fenomena, or course of meteorologic events, is observed or believed to complete itself. compare weathers period.

weather-flag 'wedəz,fræg n. a flag which is used as a wether-signal; one of the special signal-flags used by the United States Wether-Bureau since the year 1891 to indicate the character of the atmosferic conditions expected to

occur at a given locality within thirty-six hours.

weather-forecast 'webəz, fo:z-ka:st n. a forecast of wetherconditions; specifically, one of the daily wether-predictions, or statements of wether-probabilities, publisht by the United States Wether-Bureau.

weather-forecaster 'wedez-foz,ka:-stez n. a forecaster of the wether; one whose occupation is to foretell or predict

wether=conditions.

- weather-lights 'wedəz,laits n. pl. lights such as the auroral lights or heatslightning, considerd as being related to the wether.
- weather-man 'wedoz,mæn n. a man whose occupation is the observation or prediction of wethersconditions; a wethers forecaster; a meteorologist.
- weather-map 'wedoz, map n. a map showing the state of the wether or atmosferic conditions, as of temperature, pressure, and wind, thruout a country or region by conventional lines, shading, or other symbols; a wetherschart.
- weather-notation ,wedəz-no'tee-sən n. a notation or system of abbreviation of terms descriptive of the principal wethers fenomena, as the alfabetic notation of Beaufort used in Great Britain, in which (c) signifies cloud; (f), fog, etc.
- weather-period 'wedez,pi:-zi-ed n. a wether-cycle or other period of time in which certain uniformities are observable in recurring wether-fenomena. compare weather-cycle.
- weather-prediction 'wedez-psi,dikson n. the prediction of wether-conditions; the art of forecasting the wether.
- wether-prevision 'wedez-psi,visen n. the prevision or foreseeing of wether-conditions.
- weather-prophet 'wedoz,psofit n. [also spelt wether-profet] one who makes profesies as to the wether; a forecaster.

- weather-register 'wedəz,zed31-stəz n. a register or record of wether conditions; an hourly or daily meteorologic record at any station, especially such a record kept by the observers themselvs, as distinguisht from one kept by selfrecording instruments.
- weather-report 'wedez-zi,po:zt n. a report of the wetherconditions, especially as issued daily by a wether servis.
- weather-service 'wedez, spzvis n. [also spelt wether servis] a servis or organization for studying, reporting upon, and forecasting the wether; a meteorological servis, such as maintaind by each of the principal governments of the world.
- weather-sharp 'wedez. sa:zp n. an expert on the wether; a skild forecaster or meteorologist.
- weather-sign 'wedez.sain n. a sign or indication of wethers conditions: a fenomenon or sensation indicating state or change of wether or atmosferic conditions.
- weather-signal 'wedəz,sıgni n. a sıgnal, such as a special flag, displayd so as to give notice of, or information re-

garding, approaching wether-conditions.

Buys Ballot's system of weather-signals, a system of wether signals, the first in modern times, adopted in Holland in 1860, and employing a form of semafore similar in design to the French, consisting of a movable horizontal bar or wind-vane and an arm hinged to the vane and carrying a disk at its free end.

weather-situation 'wedəz-sitsu, ee-sən n. the situation as to wether; the state of things as for as the wether goes;

the wether conditions.

weather-station 'wedəz, stee-sən n. a station where observations are made upon the wether and reported to a central offis: one of the branch stations of a wether servis: a me-

teorologic observingsstation.

weather-symbol 'wedəz,sımbəl n. a symbol or conventional sign used in recording wethersconditions or making wethersmaps, as one of those adopted by the International Meteorological Congress to represent hydrometeors, etc.

weather-type 'wedez, taip n. a type or distinctiv kind of wether observable at a given station under given distances relations to centers of high and low barometric pressure.

compare windstype.

weather-warning 'wedez, we:z-nin n. warning regarding approaching bad wether; an admonitory wether-signal. compare storm=warning.

weather-whistle 'wedəz,wisəl n. a whistle used as a

wether signal; a signal consisting of steam whistle blasts, long and short, in various combinations.

web web n.

1. a sheet of woven fabric covering an aeroplane wing; the cloth which forms the surface of an aerofoil.

2. the vane or vexillum of a bird's fether on either side

of the shaft or stem; the pogonium or van.

3. one of the wooden blocks acting as distance-pieces between the ribs of the sustaining-plane of a flying-machine.

webbing 'webin n. the woven fabric which is stretcht over the frame of an aerofeil or wing; the cloth surfacing of an aeroplane.

web-cloth 'web,klo:θ n. the cloth used in or constituting the web of an airscraft.

webby 'webr adj. of a web; webelike; membranous: as, the *webby plumage of certain birds; the *webby wings of bats.

web-sprit 'web, sprit n. a sprit or spar connected with the web or webbing of a air craft.

weight weet n.

shifting weight, one of the weights or havy bodies which in some airships are made to shift longitudinally along the understructure to aid in maintaining equilibrium.

weight-carrier 'weet,kæzi-əz n. a flying-machine especially designed to carry weight; an air-craft for transporting hevy

goods; an aerial freighter.

westerly 'westerli n. [ploral westerlies] a westerly wind:

as, a prevailing *westerly.

wheel wil n. the circular, rotating handle by the manipulation of which the driver or pilot operates the rudder or control of an airscraft; the handswheel used for steering; the steeringswheel; the helmswheel: as, at the airship's *wheel; the *wheel of the aeroplane.

wheel-kite 'wiil, kurt n. a hevy Chinese taild kite consisting of two connected disks in each of whose faces is a wind-

mill-wheel which is revolvd by the wind.

whip wip n. one of the radii, arms, or sail-frames of an old-

style four-vaned vertical windmill.

whip-line 'wip, lain n. a line or piece of strong cord which is attacht at one and to the bridle of a kite and which has at its other and a long loop to which the flying-cord or kite-line may be tied.

whir wB:z v.

1. intr. fly, dart, revelv or otherwise move quickly with a whizzing or buzzing sound, or swish, like that made by a stick or a projectil moving rapidly thru the air; whizz.

2. tr. move quickly with a whizzing or buzzing sound:

as, the hummingsbird *whirs its wings.

whir we: n. a swishing or buzzing sound, as of the wings of certain birds when in flight, or of the blades of a revolving propeller.

whirl wB:zł v.

1. tr. swing or turn rapidly round; rotate; revelv.

2. intr. turn swiftly round, as in a helicoid course; rotate rapidly.

whirl we:zł n.

1. a rapid turning or circling movement; a swift or rotary motion or gyration: as, his spiral *whirl thru the air.

2, a mass of air or other matter having such a circling

or helicoid motion, as an airseddy or whirlwind.

whirlblast 'we:zi,bia:st n. a whirling blast of wind; a whirl-wind.

whirling-fan 'ws:z-lin,fæn n. a fan which by whirling imports motion to an air-scraft; a fan-propeller; an air-screw.

whirling-machine 'wm:z-lin-ma, sin n. a primitiv form of whirlingstable, said to have been first used by Robbins in

1761.

whirling-table 'ws:z-lin, tee-bel n. a machine consisting of a herizental arm turning upon a vertical axis used for whirling or revolving planes or aerofeils in order to determin the resistance efferd by the air, or for determining the constants of anemometers, or for similar purposes; a whirling-machine of medern construction.

whirlwind 'ws:zi,wind n. a wind moving in a whirl, addy, or circumscribed circular path; a mass of air, as in a ternado, waterspout, or sand-pillar, of which the height is usually great in proportion to the width, rotating rapidly on a vertical or slightly inclined axis and having at the same

time a translatory motion over the land or sea.

wicker 'wikez n. a small pliant twig; an osier; a withe; also, wickerwork.

wickerwork 'wikəz,we:zk n. [also spelt wicker-work] basketwork of any sort, as that of a balloon-car; anything plated, woven, or wattled of flexible and tough material, as osier. rattan, or thin strips of wood.

winch wints n. a machine in which an axis is rotated by means of a crank-handle, used for winding up or letting out the holding-rope of a captiv balloon, or a kite-line; a

windlass.

winch-house 'wint', house n. a house or bilding from which a kite-winch is workt.

wind wind n. air in natural motion at or above the earth's

surface, or, especially, relatively to the earth's surface; an atmosferic current; a current of air as coming from a porticular direction; a movement or rush of air relative to the observer, as when flying thru still air; also, air ortificially put in motion, as by bellows or a blower, or by a projectil; an air-current or blast, natural or ortificial.

against the wind, in an opposit direction to the wind; in a direction opposit to that in which the wind is blowing;

so as to meet the wind.

backing wind, a wind the changing direction of which shifts around the dial of the compass anti-clockwise, or against the sun: the opposit of hauling wind.

beating wind, (seasterm) a hed-wind which beats against

a vessel and forces it to tack.

before the wind, (seasterm) in the direction in which the wind blows.

Cape:Town wind, a violent vapor:laden wind which blows down from Table Mountain, opposit Cape Town, South Africa.

cardinal wind, a wind which blows from one of the four

cardinal points; a north, south, east, or west wind.

chinook wind, a warm, dry, westerly or northerly wind blowing at intervals on the eastern slopes of the Rocky Mountains, similar to the föhn winds of Switzerland; a chinook.

coastal wind, same meaning as coast-wind.

diurnal inversion of the wind, the inversion or reversal of the relations of the velocities of the winds every twenty-four hours discoverd by Espy in 1840; the law that the wind next the surface of the earth is feeblest at night and strongest at midday, whereas the reverse is true at a certain altitude above the surface.

Dove's law of the rotation of the winds, the law or rule, known alredy by Aristotle to be true (for the Mediterranean region) but given wider extension by Dove in 1827, that, in the north temperate zone, the wind-directions at any given place pass thru a cycle of changes lasting only a few days, the order usually being east, south, west, north: that is (on a compass-dial), clockwise, or with the sun.

down the wind, in the same direction as the wind is blowing or moving; with the wind: as, birds fly quickly

*down the wind.

etesian wind, the regular north and northeast wind blowing over the Mediterranean Sea from southern Europe in the summertime, especially in July and August, and apparently due to an indust of air toward the Sahara. eye of the wind, the precise point from which the wind is blowing.

face of a wind, the front or fore-part of a wind conceived as a mass of advancing air; the aspect presented by a hedwind: as, to struggle in the *face of a wind.

fish-tail wind, a fluctuating or gusty wind.

ground-surface wind, a wind along the surface of the

ground; a wind just above the land-surface.

hauling wind, a wind the changing direction of which shifts around the dial of the compass cleckwise, or with the sun: the epposit of backing wind.

head wind, same meaning as headswind.

high wind, a wind of great velocity or force; a strong wind.

hot wind, any wind made up of hot or very warm air; specifically, in Australia, a north wind lasting two or three days, and being at times excessivly hot.

hurricane wind, a wind which is characteristic of a hurricane, revolving anti-clockwise in the northern hemi-

sfere, clockwise in the southern.

mean wind, a wind which has the mean or average velocity or force.

moderate wind, same meaning as moderate breeze. see under breeze.

planetary wind, a wind which forms part of or is due to the planetary circulation of the earth's atmosfere; a planetary air-current. see under circulation.

polar wind, one of the winds characteristic of the polar regions of the earth; one of the general atmosferic currents in the neighborhood of the north or south pole.

relative wind, the wind or motion of the air relativ to a moving body or object such as an aerofoil, airship, or flyer, in flight.

spiraling wind, same meaning as spiral wind.

spiral wind, a wind which has a spiral or helicoid course; an atmosferic current moving spirally, as in a cyclone, or around the globe; a cyclonic or anticyclonic wind; a spiraling wind.

stiff wind, a wind of considerable strength or velocity; a

strong wind; a stiff breeze.

with the wind, in the direction in which the wind is blowing or moving; down the wind.

windage 'windida n.

1. the disturbance set up in the atmosfere by a body moving thru it or revolving in it.

2. the air-friction of a moving mechanism or part.

- wind-area 'wind. e:-zi-a n. the area presented to the wind. as of the wheel of a windsmotor.
- wind-bag 'wind.bæg n. a bag fild with wind or designed to be fild by the wind.
- wind-band 'wind, bænd n. (provincial, in England) a long band-like cloud supposed to indicate winds or wether.
- wind-base 'wind, bees n. the base or surface of an aeroplane flying-machine which is acted upon, or resists the pressure of, the wind or air during flight.

wind-blown 'wind.bloon adi.

- 1. blown or wafted by the wind or air; windsborne; wind-driven: as. *wind-blown thistledown.
- 2. blown by the wind or air, as a Chinese whistle attacht to a flying pigeon.

wind-borne 'wind,bo:zn adj. borne along by the wind or

air; wind=blown; wind=driven.

wind-break 'wind,bzeek n. some object which breaks the force of the wind, as a fence, a belt of trees, or a cliff; a barrier on the earth's surface which breaks or interrupts winds; a narow sheltersbelt. compare windsmantle, shelters wood, snow=break.

wind-chart 'wind.t(q:zt n. a chart or map showing the wind: directions at a given time or season over any region of the

earth

wind-check 'wind.tick n, a check or ticket-stub with which spectators of an airship-test or flying-exhibition are sometimes provided, good for admission a second time, as on some other day, if unfavorable wind or wether-conditions prevent flight at the first trial.

wind-chest 'wind,tsest n. a chest, as the gourd-like body of certain whistles, designed to receiv or contain wind.

wind-current 'wind,kezent n. a current of wind or air; an air current.

wind-direction 'wind-dizekson n. a direction of the wind; the point or quarter from which the wind blows.

wind-dog 'wind,dog n. a fragment, piece, or portion of a rainbow seen on detacht clouds; a wind=gall.

wind-drift 'wind.drift n. the drift or general movement of the wind; the trend of the air-currents as shown by the drift of clouds, storms, etc.

wind-driven 'wind, driven n. driven along by the wind;

windsblown; windsborne.

wind-eddy 'wind, edi n. an eddy or whirl of wind; a little whirlwind: as, trecherous *windseddies.

winder 'warn-dez n. a device for winding a cord, as in a rubber-band driven flyer.

wind-firm 'wind,fB:zm adj. firm against the wind; capa-

ble of withstanding hevy winds.

wind-fluctuation 'wind-flaktsu, ee-sən n. the fluctuation or wave-like movement in the wind, in different directions; turbulence, commotion, or disturbance of the wind.

wind-friction 'wind, fsik jon n. the friction or surface re-

sistance of the wind, as upon a kite; air=friction.

wind-gage 'wind, geed3 n. [also spelt wind-gauge] an instrument for gaging or mesuring the velocity, force, or pressure of the wind; an anemometer.

wind-gall 'wind,gc: i n. a fragment, piece, or portion of a

rainbow seen on detacht clouds; a windsdog.

wind-gap 'wind, gap n. a sloping ravine, netch, or cleft

indenting the upper part of a mountain-ridge.

wind-guard 'wind,gu:zd n. [also spelt wind=gard] a gard, as on the nose of a balloon, for protection against the wind; a wind=screen.

wind-gust 'wind, gast n. a gust or flaw of wind.

wind-gyration 'wind-d3a1,zee-san n. a gyration or rotary mass of wind; an atmosferic eddy.

windily 'windi-it adv. with high wind; in a way that be-

tokens wind.

windiness 'winding n. the state of being windy or tempestuous.

winding-drum 'wain-din,dram n. a drum or windlass on a flying-machine by means of which to wind the starting-

rope by which the craft is launcht; a winch.

windlass 'windles n. a wheel-and-axle device, such as a winch, used for controlling the ropes or lines connected with captiv balloons or kites, or the guide-ropes of balloons.

wind-mantle 'wind, mæntl n. a natural or ortificial ferest maintaind as a mantle for protection against the wind; a

shelter=belt or shelter=wood.

wind-meter 'wind,mii-təz n. a meter or mesuring>device for gaging the force, pressure, or velocity of the wind; an anemometer.

windmill 'wind,mil, 'win,mil n. a wind-motor.

windmill-sail wind-mil, seel n. one of the sails, vanes, or whips of a windmill.

wind-motion 'wind, moo-\on n. the motion of the wind; the movement of the air: as, the motiv power of *wind<motion.

wind-motor 'wind,moo-toz n. a motor driven by the force of the wind; a windmill.

wind-object 'wind, obd3ikt n. an object designed to act in or against the wind; an aerofoil or the like.

wind-pocket 'wind, pokit n. a pocket or receptacle in a kite or aeroplane, designed to catch the wind or air and aid in preserving the equilibrium of the craft; a small windbag.

wind-pressure 'wind,psesoz n. the pressure of the wind

upon any object in its path.

coefficient of windspressure, the coefficient or numerical constant used as a mesure of the pressure of the wind against a stationary object, or of the resistance of the air to a moving object.

wind-pulsation 'wind-pal, see-son n. a pulsation, threb, or beat of the wind; the pulsation or threbbing of the wind, a

wind-pulse: as, harmonic *wind-pulsation.

wind-pulse 'wind, pals n. a pulse or threb of the wind; a

wind=pulsation.

wind-rate 'wind, zeet n. the rate of windsmovement; the comparativ degree of rapidity of a wind; windsvelocity; windspeed.

wind-record 'wind, zekəzd n. a record of wind velocities or

directions, as by an anemograf; an anemogram.

wind-register 'wind zed31-stəz n. an instrument for registering or recording the direction and force of the wind; an anemograf.

wind-river 'wind, zivəz n. a river or definitly defined current of wind; a long, stedy atmosferic stream or current flowing between certain points: as, the mighty *wind-river

formd by the Rhine valley.

wind-rose 'wind, zooz n. a table, diagram, or grafic device of radial or rosette-like form indicating the relativ frequency of winds blowing from different points of the compass or the relativ amount of total winds movement in each direction; a winds stor; also, a similar table or diagram showing the connection between the winds direction and any other wether condition, as cloudiness, rainfall, or temperature.

baric winderose, a winderose whose radii are proportional to, or show, for a given place, the average barometric pressure of the atmosfere during the prevalence of wind from

each point of the compass; a barometric wind-rose.

barometric wind-rose, same meaning as baric wind-rose. humidity wind-rose, a wind-rose whose radii are proportional to, or show, for a given place, the average relativ or absolute humidity or the relativ dew-point of the atmosfere during the prevalence of wind from each point of the compass.

hyetal wind=rose, same meaning as rain wind=rose.

rain wind rose, a wind rose whose radii are proportional to, or show, for a given place, the average rainfall during the prevalence of wind from each point of the compass; a hyetal wind rose.

temperature winderose, a winderose whose radii are proportional to, or show, for a given place, the average temperature during the prevalence of wind from each point of

the compass.

wind-sail 'wind, seel n.

1. (seasterm) a wide tube or funnel of canvas serving to convey wind or a current of fresh air into the lower parts of a ship.

2. one of the vanes or sails of a windmill.

wind-scale 'wind, skeel n. a number of words or terms systematically arranged for use in describing the force of the wind, as the 122 term scale introduced by Beaufort into the British navy in 1805. see under scale.

international wind-scale, same meaning as Smithsonian

wind=scale.

Smithsonian windsscale, a windsscale consisting of ten numerical terms: o, colm, i, light air, 2, light wind, etc., introduced by the Smithsonian Institution of Washington, D. C.: the international windsscale.

wind-scoop 'wind, skoup n. a device resembling a scoop or funnel, as on the deck of a water-ship, so arranged that the motion of the craft will cause it to take in and transmit fresh air to the interior of the vessel, for ventilation.

wind-shaft 'wind, Saift n. the horizontal shaft of a wind-

mill or wind-motor.

wind-shield 'wind, silid n. a shield or screen for protec-

tion against the wind; a wind-gard.

wind-signal 'wind, signil n. a signal having reference to approaching wind or storm; a sign, such as a special flag, for publicly announcing wind-velocities or storms.

wind-speed 'wind, sprid n. the speed or rapidity of move-

ment of the wind; wind-velocity; wind-rate.

windspout 'wind, spout n. [also spelt windspout] a waterspout, tornadosfunnel, or other form of whirlwind; a vapor-

spout.

wind-star 'wind, staz n. a star shaped diagram whose radii are proportional to, or show, for a given place, the average velocities of the winds blowing from each point of the compass; a wind-rose.

wind-storm 'wind, ste:zm n. [also spelt windstorm, wind

storm] a storm with hevy wind, without rain or other pre-

cipitation.

wind-strong 'wind, strong n. having strong winds; characterized by the presence of atmosferic currents of relativly great strength or velocity; said of regions; the opposit of wind=weak.

wind-support 'wind-sa,po:zt n. the support or supporting= power of the wind; the sustaining power or buoyancy of

the air.

wind-swift 'wind, swift adj. swift as the wind: as, the

*windswift Cupid.

wind-table 'wind, tee-bal n. a table, as in print, presenting data regarding winds; a tabular view of statistics of winds speeds, etc.

wind-term 'wind,tB:zm n. a term, word, or frase used to

describe a wind, as in a wind-scale.

wind-tight 'wind, tait adj. so tight as to prevent the passage

of wind or air.

wind-type 'wind, taip n. a type or distinctiv kind of wind: as, the southerly *wind-type at a given station, compare weather=type.

wind-umbrella 'wind-Am,bzeio n. a parachute.

wind-vane 'wind, veen n. a vane operated by the wind, such as an arrow free to revely on an upright rod, used for indicating the direction of the wind; also, a device resembling a fish-kite; a fly; sometimes cald by sailors duff-bag.

wind-velocity 'wind-vi,losi-ti n. the velocity of the wind; the rate or speed at which a wind blows or an air-current

moves; wind-speed; wind-rate.

wind-wagon 'wind, wægen n. a wagon or land-vehicle

which is driven by means of an aerial propeller.

windward 'windword adj. toward the wind; nearest the point from which the wind blows: the opposit of leeward. windward 'windword n, the point from which the wind

blows.

windward 'windward adv. toward the wind; opposed to leewind-warning 'wind, we:z-nin n. a warning or admonitory

notice regarding approaching wind-conditions; a cautionary windsignal.

wind-weak 'wind, wiik adj. having weak winds; characterized by the presence of relativly feeble atmosferic currents:

said of regions: the opposit of wind-strong. wind-wheel 'wind, will n. a wheel moved by the wind and used as a propeller in an airship, or as a source of power

as in a windmill.

windy winds adj. consisting of, next to, characterized

by, or resembling wind.

windy-weep 'windi, wiip n. a gentle evening breeze which issues with a weeping or sighing sound from a forest or ravine upon a broad quiet river.

wind-zone 'wind, zoon n. a zone, belt, or region in which a certain type of wind prevails; the region of the unders

winds, or of the upperswinds.

wing win n.

A. the fore-lim of a bird, bat, or other vertebrate animal (homelogous with the human arm), fitted in any way for flight or aerial locomotion, or even, sometimes, when not so fitted; also, a similar appendage in insects, having a similar function: sometimes used figuratively.

ample wing, see ample.

angle of the wing, the carpal angle of a bird's wing; the

bend of the wing; the bend; the flexure.

anterior wing, (in entomology) one of the front upper wings of an insect which has two pairs of wings; a forewing; a mesothoracic wing; a superior wing.

archt wing, a wing having an orcht form; a bow-shaped

wing

bastard wing, the winglet or alula of a bird's wing; the

spurious wing; the ala spuria.

convoluted wings, (in entomology) wings which in repose embrace the body of the insect from above downward, inclosing it as in a tube.

deflexed wings, (in entomology) wings which in repose cover the body of the insect like a roof, the internal edges of the primaries meeting, and the surfaces sloping down on both sides, as in many moths and homopters.

dentate wing, a wing with dentate or tootht margin; a

wing with a netcht edge.

digitate wing, (in entomology) a wing divided into fingerlike radii, as in many pteroferidae, by incisions extending from the margin of the wing, between the veins or nervures, toward the base.

divergent wings, (in entomology) wings which in repose are horizontal but spred apart receding from the abdomen,

as in many flies.

erect wings (in entomology) wings which in repose are held erect or upright over the body when the insect rests, as in most butterflies; vertical wings.

expanse of wing, the expanse, extent, or spred of wing; the tip-to-tip mesurement of the extended wings; stretch of wing; alar expanse; alar extent; wing-spred (sense 1).

extent of wing, the extent or expanse of wing; wings spred.

false wing, the alula of a bird's wing; the bastard wing; the ala spuria.

fixing of the wing, a fixing or rigidity of the wing or wings of a wounded bird, due to nervous shock.

flexure of the wing, the carpal angle of a bird's wing; the bend of the wing; the flexure or bend.

folded wings, same meaning as plicate wings.

inferior wing, (in entomology) a posterior or hind wing of an insect: so cald because it folds under the anterior wing.

length of wing, the shortest distance from the flexure or carpal angle of a bird's wing to the wing-tip or point of the wing.

lining of the wing, the under set of wing-coverts, which lines the wing of a bird; the inferior tectrices.

little wing, the small parcel of fethers which grow upon a bird's thum.

make wing, take wing, take flight; fly; depart.

mesothoracic wing, (in entomology) one of the pair of wings borne on the mesothorax or middle division of the thorax of an insect; one of the first pair of wings; an anterior or upper wing; a fore-wing; a superior wing.

metathoracic wing, (in entomology) one of the pair of wings borne on the metathorax or third division of the thorax of an insect; one of the second pair of wings; a posterior or lower wing: a bind-wing; an inferior wing.

mirror of a wing, a specially colord area on some of the

flight-fethers of a bird's wing; the speculum.

on the wing, (adjectivally) being upon the wing or in flight; traveling: as, a hunter of birds *en the wing; (adverbially) while upon the wing or in flight; while moving or traveling thru the air.

on the wings of the wind, aloft, or in the air, borne along by the wind considerd as a winged creature in flight.

petiolate wing, (in entomology) an insect-wing with a petiole-like stalk or base; a wing in which the base is very narrow and has parallel sides, suddenly enlorging to the body of the wing, as in the genus Agrion.

plane wings, (in entomology) wings which in repose are

extended horizontally, or in a horizontal plane.

plicate wings, (in entomology) wings which in repose are doubled or folded lengthwise one or more times; folded wings.

point of the wing, the extreme and of a bird's wing; the

apex or tipsend of the longest primary of the wing; the wingstip.

posterior wing, (in entomology) one of the hinder or under pair of wings of an insect which has two pairs of wings; a hindswing; a metathoracic wing; an inferior wing.

reversed wings, (in entomology) wings which in repose are deflext, the upper wings lying closer to the body of the insect than the lower ones, which project beyond their anterior margins, as in certain lepidopters.

root of the wing, the part or end of the wing toward the

bird's shoulder.

spurious wing, the winglet or alula of a bird's wing; the bastard wing; the ala spuria.

stretch of the wings, same meaning as stretch of wing.

stretch of wing, the distance or mesurement from tip to tip of the outspred wings of a bird or insect; expanse or extent of wing; alar expanse; alar extent; wing-spred (sense 1).

superior wing, (in entomology) one of the anterior wings of an insect which overlie or fold over the posterior ones;

an upper or fore wing.

tail of the wing, (in entomology) one of the long slender backward prolongations of the wing of an insect, as a butterfly or meth.

take wing, take flight; make wing; depart.

tectiform wings, (in entomology) roof-shaped wings; wings which are held sloping like the roof of a house when the insect rests.

thoracic wing, (in entomology) a wing borne upon the thorax of an insect; a metathoracic or mesothoracic wing.

tumid wing, (in entomology) a wing in which the membrane of every cell is larger than the cell itself, so that the membrane projects slightly, as in the saweflies.

under wing, (in entomology) one of the inferior wings of

an insect; a posterior wing.

unequal wings, (in entomology) wings of which the anterior and posterior pairs are of unequal length, the anterior pair being in this case usually the longer.

upper wing, (in entomology) one of the superior wings,

of an insect; an anterior wing.

vertical wings, same meaning as erect wings.

2. an artificial structure resembling a natural wing in form or function, designed for aerial sustentation or flight; one of the sustaining surfaces, or sets of sustaining surfaces or sails, on either side of the axis of flight, or of the

body, of a flying-machine; one of the supporting aerofoils

or planes of a biplane or multiplane flyer.

continuous wing, a wing or supporting-plane which is continuous or which presents a single uninterrupted surface to the air; a sustaining-surface which consists of but one aerofeil and is not of two or more separate wings: contrast separated wings.

flapping wing, a wing which flaps, moves up and down,

sways, or beats; a reciprocating wing.

oscillating wing, a wing which oscillates, swings, vibrates, or moves to and fro, or up and down.

reciprocating wing, a wing which reciprocates, waves, flaps, moves to and fro, or has an alternating movement;

a flapping wing.

rocking wing, a wing which rocks or is capable of an escillatory movement, as in some monoplane flying-machines, for purposes of lateral balancing.

rotating wing, a wing which rotates, revelvs, moves round a center or axis, or has a circular motion like that of a

screwspropeller blade.

separated wings, wings or supporting-planes which, tho disposed in approximately the same geometric plane, are separated by a cartain space, as in a tandem monoplane; sustaining-surfaces consisting of distinct or discontinuous acrofeils placed one after the other with some space between. contrast continuous wing.

spread of wing, the surface-mesurement or area of the

wings of a flyer; wingsarea; wingspred (sense 2).

vibrating wing, a wing that swings, escillates, or moves to and fro; an escillating wing.

waving wing, a wing that waves, undulates, fluctuates, or sways up and down or to and fro.

wing win v. [past participle and preterit winged, wingd]

1. tr. equip or provide with wings for flying; furnish with fethers or vanes, as an arrow; qualify for flight: as, for her he *wings his shoulders.

2. tr. bear in flight: transport on or as on wings: as. he

will *wing me some witherd bough.

3. tr. perform or accomplish by means of wings: as, to haven she *wingd her flight; to *wing one's way.

4. tr. traverse in flight: as, to *wing the midway air.

5. tr. wound or disable in the wing; shoot or disable while traveling on the wing, or in flight: as, the offense of *winging a balloon or an aeroplane at a thousand yords.

6. intr. fly, soar, travel on the wing: as, he has never

*wingd from view of the nest.

wing-action 'win, æk sən n. the action characteristic of wings; the motion peculiar to wings.

wing-are 'win,a:zk n. the arc or angular distance traverst

by a flapping or reciprocating wing or aerofoil.

wing-area 'win, e:-zi-ə n. the area of the wing or wings; the area of the sustaining surfaces of a bird or flying machine; spred of wing; wing spred (sense 2).

wing-arm 'win, a:zm n. the arm or structure to which the wing of a flying-machine is attacht, and which moves the

wing.

wing-band 'win,bænd n. same meaning as wing-bar.

wing-bar 'win,ba:z n.

1. a colord bar or band across a bird's wing; such a band formd by the tips of the greater or median wing-coverts, or both of these, and located between the wing-bow and the wing-bay; a wing-band.

2. a bur or rod used as a longitudinal strengthenings member in a wing-frame; one of the spars or poles which span an aeroplane sustaining-plane from tip to tip at right

angles to the ribs; a simple wingsgirder.

wing-bay 'win, bee n. the (bay-colord or other) plumagemarking of a bird formd by the secondary fethers of the wing when the wing is closed and these fethers differ in color from the rest of the plumage.

wing-beat 'win, bit n. a beat or stroke of a wing; one complete motion, or cycle of movement, of a wing in the action of flying; a wingstroke: as, the smaller the creature, the

quicker the *wingsbeat.

wing-blade 'win, bleed n. the blade or vane of a wing or of a wing-like part.

wing-bone 'win,boon n. any bone of a bird's wing.

wing-border 'win,bo:z-doz n. the border, margin, or edge of a wing.

wing-bow 'win,boo n. the plumage-marking on the shoul-

der or bend of a bird's wing.

wing-case 'win, kees n. the hard, herny, case-like anterior or upper modified wing which overlies the functional wing of many insects, especially coleopters; a wing-cover; a wing-sheath; an elytrum; a hemielytrum: as, the flight of the *wing-case insects.

wing-cell 'win, sel n. (in entomology) any one of the spaces

between the nerves or veins of an insect's wing.

wing-center 'win, sentoz n. the center or middle point of a wing.

aerodromic wingscenter, a point, in a wing of an aerofoil, such that, if the whole wingsresistance (in the line of flight) were concentrated there, the rotary stability of the aerofoil would be the same as in the actual case. compara aerodynamic wingscenter, aerodromic radius.

aerodynamic wingscenter, a point, in a wing of an aero foil, such that, if the whole liftingspower of the wing were concentrated there, the rotatry stability of the aerofor would be the same as in the actual case; the aerodynamic center of a wing. compare aerodromic wingscenter, aerodynamic radius.

wing-cover win, kavez n. same meaning as wing scase.

wing-covert 'win, kavezt n. a covert or covering fether of a bird's wing; only one of the small fethers which overlie or underlie the flight fethers of a wing; a covert fether of tectgix of the wing.

winged 'winid adj. having or wearing wings: as, the *winged god, Mercury; the *winged horse, Pegasus; (of an arrow) having vanes; fetherd.

winged leaf, (in botany) a pinnate or pinnately divided

leaf.

winged petiole. (in botany) a petiole with a thin wing-

winged seed, (in botany) a seed, as a samara, having one or more wings or membranous extensions causing it to be wafted by the wind.

winged stem, (in botany) a stem having thin lateral extensions.

winged wind past participle and preterit. see wing (verb). wingedly 'wini-dir adv. in a winged manner; on, with, or

by means of wings.

wing-end 'win, end n. the outer end or lateral termination of a wing or aerofoil; a wing-tip: as, sliding or swinging *wing-ends.

winger 'winger n. one who or that which wings, in any sense.

wing-feather 'win, fedez n. [also spelt wing-fether] any fether of a bird's wing, especially a quill-fether of the wing; a wing-quill; a flight-fether; a remex.

wing-finger 'win, finger n. one of the fingers or digits, as of a bat (or pterodactyl), which supports (or supported) the wing-membrane.

wing-fish 'win,fis n. a flying-fish, especially a flying-gur-

wing-flapper 'win, flæper n. a bird, such as the pigeon, which habitually flies by means of wing-flapping; a bird which employs flapping flight.

wing-flapping 'win,flæpin n. that flaps wings; provided with flapping wings: as, a *wing-flapping machine.

wing-flexion 'win, frek son n. same meaning as wings flexure.

Jiexure

wing-flexure 'win,fleksoz n. the flexure, bending, or warping of the wings; wing-flexion.

wing-flight 'win, flait n. artificial flight by means of

wings; mechanical flight.

wing-flyer 'win, firai-oz n. [also spelt wing-flier] one who flies with wings or winged machines; an aeroplanist, an aviator; a man-bird.

wing-footed 'win, fotid adj. having wings; aliped; also,

rapid, swift: as, *wingsfooted Mercury.

wing-form 'win, fo:zm n. [also spelt wing form] the form or shape characteristic of, or desirable for, wings or aerofoils; wing=form; wing=plan.

wing-formed 'win,fo:zmd adj. [also spelt wing=formd]

formd like a wing; wing-shaped, aliform, alate.

wing-frame 'win, seem n. the frame or framework which gives form to or supports a wing or aerofoil; the skeletal structure of an artificial wing.

wing-girder 'win,g8:z-dəz n. a girder in a wing-frame; a

wingsbar, commonly of biltsup construction.

wing-handed 'win, handed adj. having hands or fore-lims modified as wings; chiropterous, as a bat.

wing-incidence 'win, insi-dns n. the incidence of a wing;

the impinging of an aerofoil upon the air.

wingless 'winders adj. having no wings or only rudimentary wings, as the estrich or the apteryx; apterous; not alate; not winged; impennate or squamipennate, as any ratite bird or penguin.

winglessness 'winder-nis n. the state of being wingless; the

condition or trait of being destitute of wings.

winglet 'winder n. a little wing; (in ornithology) the alula of a bird's wing; the bastard or spurious wing; the ala spuria; (in entomology) the alula, a membrane under the base of the elytyon of many celeopters; also, the pterygium, a lateral expansion on each side of the end of the restrum, in many weevils.

2. a relativly small supplementary wing, vane, or aerofoil in a flying-machine or other aerial device, as an aile-

ron, or a propeller-blade.

winglike win,lark adj. [also spelt wing-like] like or resembling a wing.

wing-mark 'win, mo:zk n. a conspicuous mork or colord band on an animal wing; the speculum of a duck.

wing-membrane 'win, mem-bzen n. the membrane or skin of a bat's wing; the alar membrane; the patagium or parachute of certain flying animals.

wing-motion 'win, moo-yon n. the motion of a wing or wings; the mode of moving the wings; as, the *wingsmo-

tion of birds.

wing-musele 'win, masəl n. one of the muscles of a bird's wing; a flight muscle.

wing-nervure 'win, ne:z-vioz n. one of the nervures or veins of an insect's wing.

wing-outline 'win, not-lain n. the outline, contour, or shape of a wing or aerofoil; wing-form; wing-plan.

wing-pad 'win,pæd n. an undevelopt pad-like wing, as in

a young grasshopper.

wing-pair 'win, pe:z n. a pair of wings; the two wings or aerofoils of a bird or flying-machine considerd together.

wing-patch 'win,pæts n. any conspicuous patch of color on

a bird's wing, as a wingsmark or speculum.

wing-plan 'win, plan n. the plan or herizental projection of a wing; the form or contour of an aerofoil as seen from above or below.

wing-plane 'win,pleen n. a plane or aeroplane, in an airship, which functions as a sustaining-surface: as, *wingplanes and rudder-planes.

wing-post 'win, poost n. a post or messenger that travels on

the wing, as a carrier-pigeon.

wing-power 'win, pau-oz n. the power or force of the wings or sustaining planes; the mechanical energy of reciprocating wings, as used in an ornithepter.

wing-pressure 'win, psesoz n. the pressure of the wings (as

of an albatross) against the air, in flight,

wing-propeller 'win-pso, pelez n. a propeller which operates the wing or wings of an aeroplane or flying-machine.

wing-quill 'win, kwil n. one of the quill-fethers of a bird's

wing; a flightsfether; a remex.

wing-resistance 'win-zi,zistns n. the resistance efferd to the air by either wing of an aerofoil: as, the relativ *wingresistances in the line of flight.

wing-scale 'win, skeel n. (in entomology) the scale or tegula covering the base of the anterior wing of a hymenopter;

a squamula or squamule.

wing-section 'win, sekson n. a section or sectional diagram of a wing; a wing grafically represented as if cut by an intersecting plane; especially, the longitudinal section (showing the fore-and-aft curvature) of a wing.

wing-sheath 'win, siiθ n. a wing-case; an elytron.

wing-shell 'win, set n. (in entomology, obsolete) a wing= case, wing cover, or wing sheath; an elytron.

wing-shield 'win, sild n, the wingscase, as of a beetle,

wing-shooting 'win, jou-tin n. the art or practis of shooting birds while they are on the wing, or flying.

wing-shot 'win, set adj. shet in the wing; also, shet while

on the wing or in flight.

wing-shot 'win fot n, a shot made at a bird which is on the

wing; also, one who shoots flying birds.

wing-skid 'win.skid n. a small skid or runner attacht under the wing or lower main-plane of a flying-machine, commonly at the tip, in order to keep the wing free of the ground, or to facilitate its motion along the ground, as in landing. compare tail-skid.

wing-spread 'win, spsed n. [also spelt wing-spred]

1. the distance from tip to tip of the extended wings. as of a bird, bat, or insect; tip-to-tip mesurement of the outspred wings; extent or expanse of wing; alar expanse; alar extent: as, a *wingspred of 12 feet.

2. the surface mesurement or area of the outspred wings. or of the projection of the outspred wings upon a given

plane; spred of wing; wingsarea.

wing-stay 'win, stee n. a stay or prop which supports a

wing or aerofeil.

wing-stroke 'win, strook n. a stroke or beat of a wing; the upward or the downward sweep of a wing; one complete motion, or cycle of movement, of a wing in the action of flying: a wingsbeat.

wing-structure 'win, straktsoz n. the mode of structure of the wings: as, the degraded *wingstructure of penguins.

wing-surface 'win, sezfis n.

1. the surface of a wing; a wing considerd as a sustain-

ingssurface or aerofeil.

2. the surface mesurement or area of the wing or wings; sustaining=surface, supporting=surface; wing=area; wing= spred (sense 2).

wing-swift 'win, swift adj. swift of wing; characterized by

rapid flight.

wing-tilting 'win, tiltin adj. designed for tilting or slanting the wings; used for tipping the sustaining-planes, or inclining them sidewise: as, a *wingstilting contrivance.

wing-tip 'win,tip n.

1. the tip or extremity of the wing of a bird or flyer; the tipsend of the wing commonly composed of the two or three longest primary wingsfethers; the point of the wing.

2. the outer or lateral end or extremity of one of the

wings or sustaining-planes of a flying-machine; a supplementary winglet, such as an aileren: as, movable *wings tips: see tib.

plural wingstips, several or many tips on each wing; multiple tips at the lateral extremity of a supporting plane.

compare tip=feather.

swinging wingstip, a wingstip, in a flyingsmachine, which

is capable of a swinging movement; as on a hinge,

wing-tract 'win,trækt n. the fether-tract or pteryla, of the wing, upon which grow all the wing fethers except the scapulars (which grow on the humeral tract); the ptervla alaris,

wing-warping 'win, we: z-pin n, the process of warping, bending, or conterting the wings or aerofoils, as of an

aeroplane flyingsmachine.

wing-warping 'win, we:z-pin adi, designed or used for

wingswarping: as, *wingswarping devices.

wing-weight 'win, weet n. the weight of the wing or wings

of a bird or flying-machine; aerofoil-weight.

wing-wheel 'win, will n. a small wheel mounted under the wing or lower main-plane of a flying-machine, commonly at the tip, in order to keep the wing free of the ground or facilitate its motion along the ground, as in starting or

wingy 'wini adj. having wings; also, soaring as on wings;

lefty: rapid, swift.

wire-tightener 'waiz,tai-tn-əz n. any device. as a turnbuckle, for tightening a wire stay or other port made of wire: a strainer.

wrist-link 'zist.link n. the wrist-joint, as of a bird's wing.

zenith 'zii-ni0 n. the point directly above the observer's hed; the vertical point of the hevens at any place; the vertex; as, the blue *zenith; to dwindle in the *zenith; the opposit of nadir.

astronomical zenith, the point at which a plum-line, suspended at the point of observation would, if produced upward, touch or pierce the celestial sfere; the plum-line zenith. The astronomical zenith is forther from the equator than the geocentric zenith, see anale of the vertical, under vertical.

geocentric zenith, the point at which a line drawn from the center of the earth and passing thru the observer would, if produced upward, touch or pierce the celestial sfere. contrast astronomical zenith.

plumb=line zenith, same meaning as astronomical zenith.

zenithal 'zri-nr-θəl adj. of the zenrth.

zenith-distance 'zni-nnth,distns n. the angular distance of any body from the zenith or vertex of the hevens; the arc or portion of a great circle of the hevens intercepted between the zenith and any object in the sky; the co-altitude. Zeppelin 'zepa-lin n. a dirigible balloon of the type devel-

opt by Ferdinand von Zeppelin; a Zeppelin airship.

zone zoon n. a belt or band; specifically, one of the five orbitrary divisions of the earth's surface, bounded by lines parallel to the equator; a climatre belt: as, the terrid *zone, or one of the temperate or frigid *zones; also, any horizental or vertical belt, tract, or region, as of the atmosfere, differing in character from adjeining belts: as, a *zone of discontinuity.

climatic zone, one of the zones, belts, or tracts girdling the earth and characterized by certain climatic conditions; one of a number of elongated or belt-like subdivisions of the surface of the globe distinguisht by successiv differences of climate: as, Koeppen's *climatic zones, Wojei-

koff's *climatre zones.

zone of cyclones, the zone or belt between latitudes 30 and 60, characterized by the prevalence of cyclones due to the conflict of descending polar winds with ascending equatorial winds.

zone of discontinuity, a zone or region of the atmosfere where the wind-conditions are discontinuous; the neutgal aerial belt or tract constituting the meeting-place of the rising air-currents and the upper-wind; an upper inversion-zone; a colm-zone.

sone of equilibrium, a zone, tract, stratum, or layer of the atmosfere in which a balloon assumes a condition of equilibrium, equipoise, balance, or stability, tending neither to

rise nor fall.

zone of mixture, a zone characterized by the mixture of conflicting winds, such as a zone of cyclones.
